PERSONS willing to CONTRACT for the ERECTION of a CHURCH, at GREEN-GREEN, in the Parish of Westhorncwich, in the county of Stafford, may see the drawings and specifications, on and after THURSDAY the 22nd of MAY, at the Offices of the Architect, Mr. JOHNSON, Lichfield.—Sealed Tenders to be sent to Mr. JOHNSON, on or before the 5th JUNE, and endorsed, "Green-green Church." The Committee do not bind themselves to accept the lowest Tender.

TO BUILDERS.—Parties desirous to CONTRACT for carrying into effect the ALTERATIONS proposed to be made at the COMMON GAOL of the County of Surrey, at Horsemonger-lane, for the purpose of adapting the same to the separate system according to the plan, specification, bill of quantities and conditions, prepared by Messrs. BANKS and BARRY, architects, which may be inspected at my Office hereinafter mentioned, on and after MONDAY, the 2nd of JUNE, are requested to transmit Tenders for the same, addressed to me at my Office hereinafter mentioned, sealed and marked, "Tender for the County Gaol," before FOUR o'clock, p.m. on MONDAY, the 23rd of the said month of JUNE; and to attend, personally, before a Committee of Magistrates for the said County, at which time and place the said Tenders will be opened at the Sessions House, Newington, on TUESDAY, the 24th of the said month of JUNE, at HALF PAST ELEVEN o'clock. The Committee will not be bound to accept the lowest or any Tender, and security will be required for the performance of the Contract by the party whose Tender may be accepted.
WORSLEY GREIG, Clerk of the Peace.
Record Office, North-street, Lambeth, May 15, 1856.

TO BUILDERS.
PERSONS desirous of TENDERING for the REBUILDING of the PARISH CHURCH of ALDERBURY, in the county of Wilts (nearly Salisbury), also for a PARSONAGE HOUSE, at West Grimstead, near Salisbury, are requested to communicate their intentions to the Architect, Mr. TEULON, of 6, Craven-street, Charing-cross. The plans and specification for the Church may be seen at the Church, on application to the Parish Clerk; and those of the Parsonage, at the present Parsonage. Tenders to be delivered to the Office of the Architect, on or before the 7th JUNE next. Neither party engages to accept the lowest or any Tender.

WILTON LOCAL BOARD of HEALTH.—WATERWORKS.—To IRONFOUNDERS, BRASSFOUNDERS, and OTHERS.—The Local Board are prepared to receive TENDERS for the MANUFACTURE and SUPPLY of about 100 tons of CAST-IRON SOCKET WATER-MAINS, for mains, and other castings for street arrangements. Also for a quantity of Hydrants, Bruce and Plumbing Valves, Air Vessels, &c. Specifications, with forms of Tender, may be had of the Clerk, on payment of 2s. 6d. and further particulars will be given on application to the Engineer and Surveyor to the Board.—Tenders, addressed to the Chairman of the Board, to be sent to the Clerk, on or before the 21st JUNE next.
By order of the Board,
THOMAS THRING, Clerk.
Wilton, near Salisbury, May 22, 1856.

MIDDLE LEVEL DRAINAGE.—To CONTRACTORS for PUBLIC WORKS.—Notice is hereby given, that the Middle Level Drainage Commissioners are desirous of receiving TENDERS for the WIDENING and DEEPENING of the NEW CUT through MARSHLAND, extending from the Ouse River to the River Nene, being about 11 miles in length.—Plans, Sections, and a Specification of the Work may be seen at the Office of Mr. R. LUNN, the Superintendent of the Middle Level Works, March, Cambs, on and after MONDAY, the 26th day of MAY instant, and any further information may be obtained at the Offices of Messrs. WALKER, BURGES, and COOPER, 4, Great George-street, Westminster. The Tenders must be delivered at my Office, 41, Parliament-street, Westminster, by TEN o'clock in the forenoon of THURSDAY, the 5th day of JUNE next, at which time the Commissioners do not pledge themselves to accept the lowest or any of the Tenders.
GEO. GAME DAY,
Clerk of the Middle Level Drainage Commissioners.
Dated this 14th day of May, 1856.

THE CONSERVATIVE LAND SOCIETY.
Viscount Ranelagh
Right Hon. R. V. N. Hamilton, M.P.
Hon. C. Cowper, M.P.
TO ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING ROADS, DRAINAGE, &c. on the ST CATHERINE'S ESTATE, near Lincoln. The Drawings and Specifications may be seen at the Office of Mr. HENRY GODDARD, Hig-street, Lincoln, on and after MONDAY, the 26th of MAY, 1856. Tenders to be delivered at the Office of the Society, No. 2, Inner Temple-gate, Fleet-street, on THURSDAY, 29th MAY, 1856. The Drawings and Specifications may be seen at the Office of Mr. HENRY GODDARD, Hig-street, Lincoln, on and after MONDAY, the 26th of MAY, 1856. Tenders to be delivered at the Office of the Society, No. 2, Inner Temple-gate, Fleet-street, on THURSDAY, 29th MAY addressed to the Secretary, and endorsed "Tenders for Roads, &c. Estate, Lincoln." The Committee do not bind themselves to accept the lowest or any Tender.
CHARLES LEWIS GRENEN
33, Norfolk-street, Strand.

TO STONE-MERCHANTS, PAVIORS, AND OTHERS.
THE LOCAL BOARD of HEALTH for the Borough of HALIFAX are prepared to receive TENDERS from competent persons for the SUPPLY of all the MATERIALS and LABOUR necessary in the Formation, Repair, and Maintenance of the Public Streets, Road Footways, and Places within the Borough. Copies of the specification, with form of Tender annexed, may be had at my Office; and further information may be obtained from Mr. G. W. STEPHENSON, the Borough Engineer. Tenders, properly endorsed and sealed, must be delivered at my Office, in the Town hall, Halifax, on or before TUESDAY, the 24th day of JUNE next, noon.—By order,
EDMD. MINSON WAVELL, Town Clerk.
Halifax, May 14, 1856.

[*For remainder of Contracts see next page.*

CONTRACTS.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and Co. 64 and 65, Bridge-road, Lambeth, where a great variety may always be seen for church, park, rail, counthouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a single door. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletree, arm-mills, &c.

FENDERS, STOVES, and FIRE-IRONS.—Buyers of the above are requested, before finally deciding to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 3l. 14s. to 8l. 18s.; ditto, with ormolu ornaments and two sets of bars, 8l. 10s. to 12l. 12s.; bronzed fenders complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 15s. to 9l.; chimney-pieces, ormolu ornaments, from 2l. 15s. to 7l. 7s.; fire irons, from 1s. 9d. the set to 4l. 4s. Silvester and all other patent stoves, with radiating hearth plates. All which he is enabled to sell at the lowest cash prices.

Finally, From the frequency and extent of his purchases; and for cash only, From these purchases being made exclusively for cash.

GASELIERS in GLASS or METAL.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to select from the various manufacturers in metal and glass all that is new or elegant in BRACKETS, PENDANTS, and CHANDELIERS, adapted to offices, passages, and dwelling houses, as well as to have some designed expressly for him; these are NOW SHOWN over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his establishment the largest and most remarkable in the kingdom, viz. from 12s. 9d. the light to 20 guineas.

The alterations and additions which these extensive premises already have undergone, and which comprise the whole of the first floor, are of such a character that the entire of EIGHT HOUSES recently added to the original premises, and the whole of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel, Silver, Plated Goods, Baths, Brushes, and Turnery, Lamps and Gasaliers, Bronzes, Iron and Brass Bedsteads, and Bedding) are on SEVEN large Show Rooms as to afford to purchasers facilities in the selection of goods that cannot be had elsewhere.

Illustrated Catalogues sent post free.

☞ ADDRESS—THE MANAGER OF ST. PANCRAS IRON WORKS, OLD ST. PANCRAS-ROAD, LONDON.

TYERMAN'S PATENT HOOP-IRON BOND,

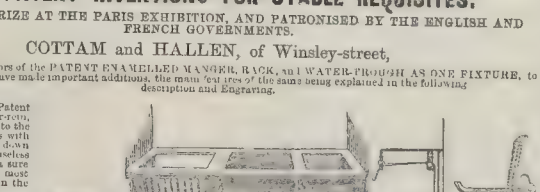
FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES
beyond the current Price of Hoop-iron.

Gauge.	In wide.	Per 1,000 ft.
No. 16	1½	7s. 0d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
16	2½	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches, and turning one side of each notch in succession in contrary directions on the several strands of the iron, thus forming REVERSED CLAWS, which hold so fast that a direct end grain of the iron is presented longitudinally, and which become when laid into the brickwork, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.



Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.
London Depôt—ST ANN'S WHARF, EARL STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES,

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Cribbar-iron, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed box detached, made of galvanized sheet iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned upon or off the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and inexpensive to instal. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACED TRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Bracket, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

SAVING IN GAS.—D. BULLET, INVENTOR and PATENTEE.—The Metal Gas Regulator is the only efficient instrument for ensuring wholesome and uniform lighting, applicable to low pressure, and preventing any irregularity in the height of the flame.—To HULLETT and CO.'S, High Holborn, London, Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

TO IRONMONGERS AND THE TRADE GENERALLY.
D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show; every article marked in plain figures. Patentees and manufacturers of the Metallic Gas Regulator. Complete pattern-book and price list, 10s. 6d. and 2l. 12s. 6d. High Holborn.

J. NAYLOR'S IRONMONGERY, NAIL, and METAL WAREHOUSE, 324, Oxford-street, near the Marble Arch. Builders, Carpenters, Cabinet-Makers, Locksmiths, and Bellhangers, supplied at the lowest prices.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the joint and all staples complete for fixing, at one inch per foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
108, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES
Office, No. 7, Size-lane, London.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 85, High Holborn.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.
CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

WOODCOCK'S PATENT SMOKE-CONSUMER.—The above Patent has a reputation beyond all question: it prevents smoke, saves fuel, promotes a rapid and abundant generation of steam, is entirely self-acting, and of small cost. Ample references and testimonials. Furnaces built on scientific and economical principles, and repairs or annual contracts for the same taken.—W. WOODCOCK, Consulting Engineer for Furnaces, 12, Bishopsgate-street Within, London.
CAUTION. Gardner's so called Patent is an infringement of the above, and all parties are hereby warned against its use.

GARDNER'S PATENT SMOKE-CONSUMING APPARATUS may be seen in successful operation in many places. Saves 30 per cent. fuel, and is entirely new. A Mr. Woodcock having made assertions affecting this patent, the patentee will perfectly satisfy all parties of the incorrectness of such statements.—24, Norfolk-street, Middlesex Hospital; or to the Makers, Messrs. BURBIDGE and HEALY, 118, Dorset-street, Fleet-street.

VENTILATION.—J. KITE, Patentee for Ventilating and Smoke-consuming Operations.—Churches, chapels, schools, club-houses, public buildings, stables, &c. effectually ventilated, on a new and economical system. Also, the New Patent Albert Chimney Cap, for the cure of smoke. Patronised by her Most Gracious Majesty; 200 on Buckingham Palace; in use also at St. James's Palace, Claremont, Windsor Castle, Government buildings, &c. Wrought iron, 20s.; galvanized ditto, 30s.; cast iron, 38s. each, the latter as durable as the building itself. Illustrations and testimonials forwarded on receipt of two postage-stamps.—Depôt, BARTON'S Ironworks and Manufactory, for the Patent Stable Fittings and enamelled Mangers.—Address, JAMES BARTON, 370, Oxford-street, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as giving the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 12, York-buildings, Adelphi.

AUSTIN'S IMPERIAL
PATENT SASH and BLIND LINE
can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES, IN TOWN OR COUNTRY.
Established 1774.

TO IRONMONGERS and BUYERS of BUILDERS' CASTINGS.—TO BE SOLD OFF, a stock of GUTTERS, RAILING-BARS, NEWELS, PANELS, SINK-TRAPS, STABLE-FITTINGS, &c. lying at WALMSLEY and CO.'S warehouse, Paul's Wharf, Upper Thames-street, London. Half-round Gutters at 7½d. per yard; O.G. do. at 11½d. per yard.—Self-acting Oven and Boiler Ranges at 27s. each.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Hurel-ii, Portland, and Bath stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing Mills, Commercial-road, Pimlico, London.

MARBLE.—The Italian Marble Company, Importers of the produce of their own quarries, in the Province of Massa-carara, Italy, beg to inform the general Marble Trade in the United Kingdom that they are prepared to undertake contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock always on sale, and orders taken for Paving slabs, Garden and Hall Statues, Vases, Tazzas, Mortars, Consoles, Chimney-pieces of all classes, Circular Table-tops, Monuments, &c. executed in Italy. For further particulars, inquire at the office, on the premises, Bridge Wharf, Pimlico, adjoining the east side of Vauxhall bridge.
WILLIAM W. BONNIN, Secretary.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

Lloyd's Marble Wharf, Thames-bank, Pimlico,
Adjoining Vauxhall bridge.
ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

STONE! STONE! STONE!—To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Self-face Slab, Granite Pitching and Curb, Guernsey and Jersey Rocker Road Materials, and every other description of stone, at JOHN KNIGHT and SON'S, Devon Wharf, Mile-end. York tooled paving, 38s. 6d. per 100 feet; slab for hearths, 4d. per foot sup.; slab for chimney-pieces, 3½d. per foot sup.; 8 by 3 window-sills, 6d. per foot run; 13 by 3 coping, 8d. per foot run; box chimnies (any opening), 8s. 6d. each. Terms cash on delivery.

TO CONTRACTORS AND OTHERS.
YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS; Hare-hill, Robin Hood, Park Spring, and Gayby, in Blocks, Headstones, or Slabs; Purbeck Paving, Sinks, Curbs, Rickstones, Pitchers, and Squares; Caithness Flags, Firestone, Newcastle and Bilston Grindstones, Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Caen Stone, Bramley Fall, Bath, Hoddlestone, Park-wood and other Block Stones. Welsh Slate Slabs, Bangor Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble, in Block and Slabs, supplied from the Wharfs, Millbank-street, City Basin, and Deptford; also direct from the quarries by vessel or rail.—Address, FREEMAN'S WHARF, 27, Millbank street, Westminster.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON Freestone in blocks of any portable size, on applying to FRAS. and OCT. N. SIMPSON, Stamford. Specimens may be seen, and information obtained at the Offices of Messrs. PINDER, SIMPSON, and SONS, 29, Savile row, Burlington-gardens, London.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

FOR MACADAMIZING ROADS.—The hardest and most durable STONE for ROAD-MAKING.—The Proprietor of an extensive Quarry just opened at Dunscannon—a Rock containing BLUE ELVIN GRANITE, which makes little dirt or dust, and has been proved by hydraulic pressure to be 25 per cent. harder than Guernsey Granite—is now open to contract to supply any quantity at the following low charges, delivered out of the vessel in the Thames: Unbroken lumps, 6s. 6d. per ton; broken, 10s. per ton.—Apply to Mr. JOHN NEWTON, Norway Wharf, Hertford-road, Kingsland-basin.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall,
London Agents—TREGELLES and TAYLOR, 3, Planer's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster

TO CONTRACTORS AND ROAD-MAKERS.
TO BE DISPOSED OF, 500 tons of ABERDEEN GRANITE, upon reasonable terms.—Apply to C. STARKEY, Contractor, 15, York-road, Lisle's-croft.

TO CONTRACTORS FOR PUBLIC AND OTHER WORKS.
THE HAYTOR GRANITE QUARRIES.
TO BE LET, with immediate possession, the noted land valuable GRANITE QUARRIES of HAYTOR DOWN, in the parish of Ilsington, in the county of Devon; six miles from Chudleigh, six from Ashburton, eight from Newton-Abbot, and twenty miles from Exeter. The Quarries are fully opened, and railroads communicate to each of them. They are known by the Old Quarry, the New Quarry, Rutland Quarry called Holwell Tor, which are all in a capital state for immediate working to any quantity, and the Stones of all scantle, from the smallest Kirb to the largest columns or blocks, may be got with the greatest facility. Annexed to the Works are an excellent Smith's house, workshops, and sheds, and, if required, several labourers' cottages. The stone is transported by means of a tram-road and canal to the port of Teignmouth. For any further particulars, apply to the Duke of Somerset's Agent, Mr. BEARNE, at the Office, Teignegrace, Newton-Abbot, Devon; Mr. BEATER, Teignmouth; or Mr. SOUTHEY, Haytor Down.

RAWDON-HILL STONE.—Messrs. TRICKETT and PERKIN are prepared to execute orders to any extent for their much-admired Building Stone. Depôts, where large stocks are kept, No. 3, Stone-wharf, Great-Northern Railway Station, Kings-cross; Victoria Stone-wharf, Rutland, Poplar (stocks quarried to suit customers) for columns, cornice, landings, steps, ledgers, head-tones, cills, &c. Delivered to any part by vessel or railway trucks.
"This stone when better known, must come into extensive use; I should think it exceedingly suitable for the London market."
C. L. DOBSON, Esq., C.E.
Address, JOHN TRICKETT, Headingley, Leeds, Yorkshire; or, SAMUEL TRICKETT, Victoria-wharf, Isle of Dogs, London.
N.B. A large quantity of Foundation Landings for sale.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 245, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GODFREE (late Beard, Beetham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, IDLE, near LEEDS,
Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Rawdon STONE, including Paving, Bramley Fall, Park Spring, Rawdon Hill, Hard, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding those of ordinary stone. Full particulars furnished on application to Mr. FIELD, RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depôts, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SOULES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is unmeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorate slabs for the tops of lee-tables, chiffoniers, consoles, &c.; baths, lavatories, altar-tablets, pulpits, columns, vases pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies. Price lists can be had on application to Mr. MAGNUS, 20 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

GREEN SLATE.—The Green Slate produced from the Tyn-y-Wersiodd Quarries, has been pronounced superior in colour, grain, and cleavage, to any hitherto used. Fine and Purple Slate of the best description.—Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street, where samples may be seen; or to Mr. JENNINGS, Pen-y-Groes, near Carnarvon.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 15s. to 10 guineas. Slate Cisterns made to any size.—J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex

TO CAPITALISTS.—Capitalists are invited to INSPECT one of the finest and most perfect SLATE FORMATIONS now existing in the Principality, combining an area upwards of one hundred acres in extent, of the most solid material, rarely to be equalled, but certainly not to be surpassed. The quarry can be reached by rail in nine hours from the metropolis, and is only distant seven miles from the South Wales Railway. The system of manufacture, the edges of the Slate, solely through the operation of machinery, are cut by pressure, and consequently by this mode the Lamina is exempt from flaw or fracture. Specimens of the material will be transmitted to any party who may require them by receiving their address. If after a survey of the quarry, there should be a disposition to treat with the proprietor for the working of the Mine upon an extensive scale, a satisfactory reference would be required.—Address to the Proprietor, Summerton Slate Quarry, Letterston, Haverfordwest. Specimens to be seen at the Office of "The Builder."

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stands at Brighton, Portsmouth, Harrogate, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATE.—HONDURAS-WHARF, BANK-SIDE.—H. SHEFFIELD has the pleasure of informing the trade, builders, and others, that he has an excellent assortment of the best Bangor Slates at the lowest prices. Shipping and all orders promptly attended to.—Offices also, 6, Rood-lane, City.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 50, FINSBURY SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN MACKINGTON, Poloneeun and Limmer Asphalte Office, Monument-chambers, 14, Fish-street hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

CROGGON and COMPANY, Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INODOROUS FELT.
For Damp Walls, and Lining Iron Houses,
3, DOWGATE-HILL LONDON.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast measured or unmeasured, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf, Greenwich; Lett's Contractors supplied to any extent.

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH.—Builders having works to execute south west of London, will find a good supply under this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Lines, Cements, Clay Goods, &c.
N.B. This wharf is very near the St. Margaret's Estate.

MAHOGANY, seasoned by Symington's new Patent Process.—JOHN COUMBE solicits an inspection of his stock. The above process enabling him to season his wood in a comparatively short space of time, he sells at prices generally charged for wet wood.—Address, PATENT WOOD SEASONING WORKS, Lady Lake's-grove, Mile-end-gate.

ACORN TIMBER WHARF and SAW MILLS,
CANAL BRIDGE, OLD KENT-ROAD, LONDON.
A Monthly Price Current forwarded on application.
RICHARD MAY, Proprietor.

GEORGE SMITH, TIMBER-MERCHANT, LONDON.—Address to No. 13, Binfield-road, Clapham-road, Stockwell; or Jamaica Coffee-house, City. Goods delivered from the Docks. PREPARED FLOORING, &c. from the Sawmills. Goods in Bond for Exportation.
N.B. A large Stock of Dry Prepared Flooring, &c. from Two to Four Years Old.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shop-fitters to his carefully selected MAHOGANY, suitable for Counter Tops, and to his seasoned MAHOGANY, PREPARED FLOORING, &c. Delivered, Materials for builders, cabinet and blind makers, &c. Delivered, cartage free, to any of the London railway stations, or within three miles from Kennington Church.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

January 1, 1855. *** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

THE SEVRES GLASS COMPANY.

									100	

The Author will endeavour in the several chapters to define the apparent origin and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their combination, both those which are several to all styles and those which are peculiar to each. He will further attempt in the 20th chapter to show how bearing in mind the several laws which he finds also to pervade the works of nature and returning to her for fresh inspiration, we may yet go forward, and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own times instead of blindly following in the footsteps of the past.

The collecting [illegible] on most of material has been the labour of many years. On the eve of giving it forth to the world, the Author fully feels the difficulty of the task he has undertaken; he trusts, nevertheless, that with this collection, artists, and all others engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form as to be use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

MACINTOSH and CO. Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing the Gutta Percha Company have pleasure in giving publicity to the following letter. FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT —Second Testimonial.—" March 15th, 1856.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump service, I can state, with much satisfaction, it answers perfectly Many Builders, and other persons, have lately examined it, and there is not the least difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ARCHITECTS, SURVEYORS, CHURCHWARDENS, &c.—S. TAYLOR, GENERAL HOUSE DECORATOR, of No. 1 and 2, Albany-place, Kentish-road, begs to respectfully intimate that he has REMOVED from Albany-road, and St. Mary's Church, Islington, to Contract, in addition to give ESTIMATES for Repairing and Decorating Churches, Chapels, Public Buildings, or any description of House Property

TO Persons having Rooms for the purpose of Education. Lectures or Public Meetings of any kind, excellent FORMS (some with backs, some with out but all covered with green baize) and TABLE for SALE. They are offered a decided bargain.—Apply to Mr. LARKINS, 18 Crawley-terrace, Brompton.

HOUSE PROPERTY.—D. ESPENETT, HOUSE and ESTATE AGENT, 108, Albany-road, Old Kent-road. Unexceptionable references and punctuality in the transaction of business, combined with moderate terms

The Builder.

VOL. XIV.—No. 694.

LATELY, it has been stated by those who are in good positions for judging, that great progress has been made since 1851, in art as applied to manufactures, and to the decoration and furnishing of houses. We propose to say a few words on the matter. The Department of Art is beginning to disseminate knowledge of correct principles amongst designers, and even amongst manufacturers. There is still, however, much to be done ere the manufacturer will have courage to freely test whether that which is good in principle will not continuously please, and whether the same form that is beautiful and æsthetically correct, may not be that which will acquire the highest mercantile value,—for, that disposition of mind which exemplifies itself through changes of fashion, is really unfavourable to the sense of beauty. Assuming, as we can readily do, that the union of high art and manufacture is compatible—whilst necessary to the intended dissemination of the benefits resulting from art,—we must regret that the public demand either has not definitively spoken yet for results from correct principles, or that the character of the demand is not readily seconded by the supply. It is still scarcely possible to furnish a house, however plain your intended work, without violating at every turn some sense of propriety, and offending some cherished perception of beauty. Indeed, the more simple the scheme of decoration and the desired ornamentation, the more difficult is the attempt. The cause is not any want of variety in patterns: it would be one part of our business to remark that the variety is already too great,—as in paper-hangings.

The excessive desire for novelty is precisely one of the deductions from the sum of satisfaction with the existing state of taste. To satisfy the desire, a multitude of designs are produced in succession by the same hands, and in every combination of colour, without, as it would appear, any thought of what would be *the most* beautiful combination.

Still, whatever the nature of the demand may be, the contrast presented by it to the taste of a preceding period is quite manifest. Formerly, those who coveted a reputation were so excessively nervous about doing wrong, that they did *nothing*; and, though it may be said that it is better to be inoperative than to be actively bad, the principle of venturing nothing would stand in the way of *progress*; in which consists all excellence,—social, moral, and intellectual. Whereas, within the last few years, amongst people of every degree, there has sprung up the desire of embellishing that "kinde of private princedome" which, according to the often-repeated words, now on the title-page of our volume, may well deserve "to be decently and delightfully adorned;" and from which desire—spite of all drawbacks—spring some of the chief social virtues. Even that desire, however, will not be attended with unmixed good, if accompanied with any *pretence*, or if there be the eventual dissatisfaction following from the habit that people have of deluding themselves into the idea that they are pleased with certain forms and ornaments, whilst candid and unprejudiced consideration would show them that they were not so. For, without technical knowledge, people would often come to right conclusions on some of the chief art-questions,—if they could divest themselves of preconception. Thus, much of what is called "ornament" in furniture and fittings, would strike them as the very reverse of *ornamental*. The presence of such "ornament" will usually be traced to pandering on the part of the designer to the notion that quantity of work constitutes something that is beautiful: for, judging by the tactics of the manufacturer, he finds it commercially advantageous to put forth this *quantity*, even though a second glance would show it to owe little to mind and hand, and to be intrinsically bad.

Recently-completed works of interior decoration and furnishing may be ranged under one of two classes. Under the one head, we would put such works as are presumed to be from new designs; and under the other we would put such interiors as present a combination of old designs and manufactured articles. We will take the latter—the more common case—first.

It is assuredly to be regretted that so little has been done to produce household fittings moderate in price, and at the same time unobjectionable in form and decoration. We will suppose that you are furnishing a room. Of course, as in every good design, your work being viewed as a whole, it is to have its points of greater and lesser prominence, and its relieving surfaces undecorated. Proceeding on such principle, we will say you come to the fireplace. You want a fender, and it suits your scheme to have it good, but undecorated. Where can you procure such an article? You will require it made to order, just as much as in the case of the most ambitious production. Fenders may be bought for 7*s.* 6*d.*—but such fenders all attempt as much as those costing 3*l.*; and of course, failure in the effect which they profess is borne upon the face of the object. So we say, in everything that the room requires; everything pretends to be ornamental, yet is obviously not so. And everything procurable, even supposing it good *per se*, is designed as a distinct thing, instead of with some regard to the fact that it will be a part of a whole. What artist would think of painting a picture where every figure should seem to be striving for prominence?

Again, in carpets and paperhangings, it is quite correct that they should be treated as backgrounds: but how difficult it is for an architect to achieve this apparently simple result. The variety of patterns is wonderful; taste is, perhaps, not wholly wanting; yet it is most difficult to procure what you need. Provided the architect can accomplish that much, he is generally afterwards overruled by others. His employer seems to regard the selection of paperhangings as a prerogative to be surrendered on no account whatsoever. We are inclined to think that it could be predicted, that (what may be found from experience), the proprietor of the house will invariably reject any pattern selected and laid before him. Nothing will satisfy but the overhauling of some hundred pieces. "Why, sir," said an intelligent paperhanger to an architect, about one of these selections, — "I have noticed over and over again, that gentlemen get so bewildered with the lot of patterns that pass before them, that sometimes they end by choosing actually the very worst of the lot." Instead of any surprise at such a result, it would not be consistent with ascertained facts in physics if it were not so. It has been conclusively shown by M. Chevreul, that the eye in looking at colour after colour, is gradually undergoing change,—so that the character of each colour is altered; in short, the colour is vitiated. An analogous result is unquestionably produced in form and proportion; indeed, the recognition of it constitutes the whole art of design. In Professor Cockerell's lectures, the effect of different dimensions upon one another, has been lucidly explained. On every ground, therefore, it is vain to expect under the present system, all the success in the interiors of ordinary houses, that an architect *might* produce, even using manufactured decorations and fittings. It is impossible to draw the line anywhere between what some may think architects' work and the completely furnished apartment,—for there can be no separation in effect. In practice, indeed, it is found very difficult to carry out the elaborate supervision which might be required; and this will bring us to the next point that we have to notice,—the influence of the class called "decorators." Only let us premise, that we could suggest means of meeting the difficulty,—under somewhat amended relations between master and pupils.

It must be admitted that the qualifications of decorators have greatly increased of late years. The names of some individuals, heads of large establishments, will at once occur to our readers. It would be very unfair to rank these with the upholsterers of a few years back. In some cases, they are truly artists; and have studied their subject long and attentively, both in England and on the Continent. In other cases, the principals have in their employment designers of great talent,—who are sometimes foreigners,—as still are the best workmen. Where the system fails is in cases where the principals have not commenced their original attention to the subject with the training that an architect has undergone. The latter, if his progress teaches him anything, feels constantly the importance of the now recognised æsthetic principles, and more especially the importance of structural truth. Designs for decorations of rooms by foreigners (as shown by the works in the late Architectural Exhibition), were mostly very greatly wanting in the recognition of this principle. In some of the works by Messrs. Galli and Cotti, the errors of the late Italian school were prominently exhibited,—painted architecture (never to be viewed otherwise than as a weak substitute) being mixed up with the true pictorial; and figures so disposed as to mimic living figures, being placed adjoining the figures in the *picture* of a different motive. In many works by others, painted imitations of pilasters, mouldings, and other architectural forms were freely introduced. There was, however, in the majority of the works, besides skill of hand, an unusual amount of fancy. Designers who have been educated on the Continent, indeed, seem to us to excel our own in the extent of their resources, or their fancy. They, however, fail where the others are under advantages,—viz. in the application of such structural principles, as here there has been the opportunity for learning through the medium of the study of Gothic architecture.

The pursuit of several different styles, it would scarcely be consistent with much that has been said on the subject in these pages, did we not also consider an error,—though in furniture it is usually regarded as a venial one. The Gothic style alone seems not to come responsive to the hand of a continentalist. The absence of effort of any sort in the style by the chief exhibitors, and Mr. Kuckuck's painted imitation of a rose window as a ceiling decoration, exemplified what we refer to.

Mr. Prignot's version of the Louis XVI. style deserved notice, both from the skill and taste manifested in those of his drawings which were in that manner, and because we omitted to refer to it specially, in those articles of the "Recent History of Architecture," which related to the progress in France of distinct style in interior decoration. It differs from the Louis

XV. style, inasmuch as it has a decided rigidity of character. It is, therefore, a better style, having regard to the element of structural truth. It has many points of resemblance to the much earlier distinctive style of the Renaissance. It is further important just now, as being promoted in the application or revival of its character, by M. Fortoul, who, as the French Minister of Public Instruction, has more opportunities of influencing the condition of our art, than are within the scope of individuals in England.

Whilst, however, we think that the Gothic style of interior decoration was inadequately represented at the Architectural Exhibition, we think it needs infusion of fresh spirit.

The great drawback to the success of works of interior decoration as produced, we say, is that the *architect* does not bring his knowledge to bear on decoration, and that the decorator lacks that regard for structure which would preserve him from many glaring errors. Through want of encouragement, insufficient allotment of time and interference by the client, and inadequate return, the architect has been gradually giving up an essential part of his profession. Is he to remain falling short of one large portion of his proper art; or, what step can he take to get the confidence given to others who follow a trade? He maintains the professional position, whilst the public choose even his workmen as their *artists*. What is the reason of this? Is it that the architect, as at present educated, cannot be an artist; or is he unnecessarily oppressed with details of business (the old story of the duties of a commander swamped under the duties of an office-clerk)? or is his peculiar professional calling valueless, or merely not understood? He is forbidden by the Institute to contract, or have any commercial interest in any class of works,—though there may be architects, who do not pay implicit deference to the restriction, in the case of decoration. If the restriction is of value, should it not be applied to all persons, and under all circumstances? However, the decorator by trade contrives to get a degree of license, which it seems never the system to give to architects. We hear of those who are generally quite unlimited as to expense, and who will submit to no dictation. They *supply* everything; and they design all new fittings, such as gas-lights, just as may seem to them requisite. In one house at Manchester, the gaseliers alone have cost as much as a fair-sized house. When the work is done the bill is sent in, and paid without complaint. What, we ask, is the position of the architect's profession compared to this? How does the difference arise? Is the architect to be positively the worse off for the maintenance of a professional *status?*

Whilst his proper position is that of chief artist of a building, and sole controller of the works, is he thus to be made to resign really the bulk of his real duties to one who, whatever his merits, is after all tradesman and contractor, as well as artist? The question involves the very existence of our profession. We crave, rather than express, opinion on the subject. We only point to what seems a strange anomaly.

Our own doctrine as to the importance of interior decoration as a positive branch of professional architecture, has been adhered to from a very early period in the course of this journal. We contended for the comprehensiveness of architecture as a subject, and in favour of attention to decorative art by architects: and in our pages it was shown that the forms and principles of decorative art, and art-manufacture, were to be, and had ever been deduced from architecture and structure; and that we said long before such views were given forth by their present chief promoters, and of course before a Department of Art had been dreamed of. We claim no merit for any discovery: no one assuming to have the slightest insight into architectural principles, or art-history, could do so: but it does seem, that even yet the application of structural principles, no less than the true relation of nature to art, requires to be pressed upon the attention of many persons.

To apprehend, as some appear to do—even yet—that mechanical resources, and new inventions are antagonistic to art, would betray a crudeness of judgment, which no educated *architect* should be guilty of. What is done in cast work, may be inferior to what has been done in wrought; but surely, that is by those who have not invented designs suited to casting, but have preferred to promulgate that certain things their new process could not do. It is this very "confession of weakness," as we have heretofore called it, that has been the error in all that has been done in interior decoration, with the aid of manufactures: and it is most erroneous to disclaim against the manufacture, simply because some have chosen to turn it to a wrong account.

That which it is most important just now to do, is to moderate the desire for excessive ornamentation, or the imitation of it, in every article of furniture or decoration. Paintings and sculpture forming the most beautiful decoration for the walls of a room, nothing should be introduced which can detract from them: and so long as ordinary costume in a room has neither colour nor lustre, it seems even doubtful whether great richness can be displayed on the walls without some want of harmony arising from that particular.

Novelty also—be it added to all that we have been saying of late on that head—is a necessary element in art, but not the only, and perhaps not the highest one.—We would have the love of art, a thing such as "age" could "not wither, or custom stale." That result will be contemporaneous with decline of *fashions;* and then at length people will comprehend what is so often quoted, but so little understood, that,—

"Taste, never idly working, saves expense."

ON BRICKS AND BRICKWORK.*

It appears to me that the subject of bricks and brickwork can not be uninteresting to an inhabitant of London, for London is essentially a brick-built city, and however little any one may be interested in building every one is interested in the view from his window, or in his walk; and as the architecture of the city is the people's property, it behoves them not to neglect it, but to use every means in their power to have something to compensate them for the green fields and God's light and air, which the houses take from them. With the bulk of the dwellings of London, it is no question whether they shall be of brick, of freestone, or of marble, but whether they shall be of brick or plaster. The advocates of cement have been, after a long struggle, compelled to give up any rational defence for its use, as a means of imitating stone; but they now tell us that they advocate its adoption as a material as honest in its way as brick or marble, and on the ground that it has a bright look far superior to the dingy brick. But take any plaster with which we are acquainted in London, and were it not for its yearly coat of stone colour, it would exceed the worst brick in dinginess, for the colour of buildings in London very slightly depends on the colour of the material employed, but on its complexion; and plaster is more apt to hold the soot than brick or stone. In every other respect it is inferior, for who can contemplate any extent of the deadest brick wall, without it calling up reflections on the wonderful industry of man, who has piled up these small cubes, of 3 inches in height, to 100 feet, and the skill he has exhibited in placing them so that they stand for ages; while the plaster hides from us all history of the building's life, and from its being only a thin coating, it is incapable of receiving any deep impressions, while its liability to crack, and to be acted on by the weather, and its susceptibility to injury from external violence, renders it an unfit material for work that is to endure. Not that I object to carefully-*executed* plaster as a means of decoration, when used in small pieces and in sheltered situations, to throw out parts of the building, nor when used as a ground for painting, as a building then becomes one vast picture in colour, or chiar'oscuro. I only object to plaster when used unpainted to cover a whole front, or as an imitation of some other material.

Being, I hope, agreed on the superiority of the commonest brick to the best plaster, we will, if you please, just consider something of the history and application of brick, before we make any further remarks on its capabilities; and in speaking of brick, I intend to include every variety of the plastic, keramic, or potter's art—every material that from a plastic state is hardened or vitrified by fire, including glazed and unglazed tiles and earthenware. Bricks must be divided into two classes, the burnt and the unburnt; and though the unburnt would hardly appear worthy of mention in a country like England, so subject to heavy rains, and with so humid an atmosphere, still the enormous structures that have been raised in unburnt bricks in countries in many respects far more civilized than our own, must entitle them to mention. The manner of forming these raw bricks we learn from various authorities and specimens; but we may take the account of Pliny as about as good a one as any that we have. In book xxxv. cap. 49, he says:—

"Bricks are not to be made from a sandy nor from a gravelly soil, much less from a pebbly one, but from a chalky and whitish or from a reddish soil; but if from a sandy, let it certainly be from a stiff one. They are best made in spring, for they get cracked in the summer. They are not good for buildings, unless they are two years old, and the loam should be well steeped before they are made." This would lead us to suppose that the Romans did not use straw or reeds like the Assyrians or Egyptians. It may be remarked, that it does not seem improbable that the moulding of unburnt bricks was discovered in a few generations after the *Creation*. The impression of the human feet on soft ground at once strikes the attention of savages. We see it represented in the picture-writing of the Mexicans, and we hear of it being used as a means of tracking the enemy by the American Indians. When its susceptibility of receiving impressions was once noticed, man could not fail to observe how it hardened in the sun; clods that had fallen in on a river bank might readily suggest its use in masses, and the nest of the swallow or the house of the beaver might have given the pattern of a complete hut. Be this as it may, we find that unburnt bricks impressed with a pattern were used at an early period: some of the oldest remains of building are in that material.

The Nineveh palaces were built of unburnt bricks, formed of loam and straw; the walls were in many instances 15 feet thick, lined with the sculptured slabs of alabaster now in the Museum; and it is the falling in of these walls, and their being again converted into earth, that has so wonderfully preserved these sculptures.

Xenophon speaks of the city "Larissa being

* The following paper was read at the Architectural Museum, Canon-row, April 21st, being the first lecture of the summer session. Gratifying reference is made to the Architectural Museum in "The Third Report of the Royal Commissioners of the Great Exhibition of 1851," although the Commissioners take a little more credit than belongs to them, when they say that very shortly *after* the publication of their Second Report, wherein they referred to the want of means of imparting instruction in Architecture, and to the absence of any museum or collection in the metropolis illustrative of that important division of the Fine Arts, "Vigorous measures were taken to provide a remedy for the deficiency in question, and that they have resulted in the establishment of an Architectural Museum, which has for some time been open for exhibition in Canon-row," the fact being that the Committee had occupied their premises some time before the Report in question appeared. The Commissioners go on to say: "The interest excited by this museum, and the success that has attended it, notwithstanding its recent formation, lead to the hope that it may expand to wider dimensions, and serve as the nucleus of a complete national collection of Architecture in all its branches. It already embraces a collection of many thousand specimens, and appears to be supported by the most eminent men in the profession. It is understood that the limited space afforded by the rooms in Canon-row tends to impede the development of the collection, and that a more extensive site would be of great advantage to it. Should it appear that the means at our disposal could in this respect be made of assistance to the promoters of this museum, we shall be happy to afford them such facilities as may be in our power."

walled with πλινθοι" (κεραμιαι, or potters' bricks, which I imagine to be unburnt bricks). "This wall," he says, "was 25 feet thick and 100 high, built on a stone plinth of 20 feet in height." The latest discoveries at Nineveh have shown us a similar wall on a stone plinth. In Mexico, the Teocalis, or God's Houses, are built, or at least faced with bricks, generally believed to be unburnt. One of these Teocalis, near Cholula, is in the form of a square truncated pyramid, and is formed of four terraces; its whole height is 177 feet; each side of its base is 1,423 feet, twice the length of the Great Pyramid of Cheops. Its base covers 44 acres, and its truncated top contains more than one acre.

In Egypt there are many small pyramids of unburnt bricks,—at Dashour and Thebes,—the bricks being formed of loam and chopped straw. Many of these bricks are stamped or moulded with figures and hieroglyphics; and it is very probable that it was for the building of these pyramids that the Israelites were employed in making bricks, as described in Exodus c. 5, v. 7.

Among the Greeks, we learn from Pausanias of Agis besieging the city of Mantinea, which was walled with unburnt bricks, and which he overcame by turning the river against it, which dissolved the wall. It is recorded that Nineveh, under Sardanapalus, was destroyed in a similar manner. Pausanias, too, tells us that walls of unburnt bricks resist the battering-ram better than stone walls; and Pliny says, that walls of this material are less affected by earthquakes than other walls; and we have found in our attacks on the Russian earthworks, that earthern walls are not less adapted for modern warfare.

The burning of bricks, and the use of mortar, seem to imply so great an advance in civilisation, that we should hardly expect to find burnt bricks used before some thousand years had elapsed from the Creation; and the first mention that we find of it is in Genesis, for the building of the Tower of Babel (Genesis xi. 3, 4):—"Let us make bricks, and burn them thoroughly; and they had brick for stone, and slime had they for mortar; and they said, Go to, let us build us a city and a tower whose top may reach unto heaven." The description given by Herodotus agrees with this exactly: "Here I think I ought to explain how the earth taken out of the moat was consumed, and in what manner the wall was built. As they dug the moat, they made bricks of the earth that was taken out, and when they had moulded a sufficient number, they baked them in kilns; then making use of hot asphalte for cement, and laying wattled reeds between the 30 bottom courses of bricks, they first built up the sides of the moat and afterwards the wall itself, in the same manner." We have lately found walls in Babylonia built exactly in this manner, with asphalte and wattled reeds.

Herodotus tells us that the king Asuchis, wishing to surpass the former kings, left a pyramid as a memorial, built of brick, on which was this inscription,—"Do not despise me in comparison with the pyramids of stone, for I excel them as much as Zeus the other gods, for by plunging a pole into a lake and collecting the mire that stuck to it, were made bricks, and in this manner built me."

Xenophon, in his "Anabasis," book ii, cap. 4, gives an account of the wall of the Medes. It was built, says he, of burnt bricks laid in asphalte, 20 feet thick, 100 feet high, and its length was said to be 20 parasangs, about 67 miles long.

Diodorus Siculus, book ii. cap. 8, mentions the walls of a palace at Babylon, as being of burnt brick, carved with men and animals all painted in the natural colours; but it is not very clear whether these were not all in raw tints as those at Nimroud. Herodotus gives a similar description of the walls of Ecbatana. The use of bricks painted in colours and burnt in was doubted until the discoveries of Layard and others, when specimens of burnt bricks were found at Nimroud, painted in white, yellow, green, and black enamel. These bricks seem to have been embedded in the plaster above the alabaster slabs, as ornament, and near Wurka, Messrs. Loftus and Boutcher found a wall formed of mud and chopped straw, ornamented with geometrical patterns formed by the circular ends of small cones of baked brick, the remaining portion of the cone being embedded in the wall. These ends had been enamelled in black, yellow, and white. Coffins and other large pieces of pottery have been found of brick or terra cotta, glazed with a greenish glaze, of which there are many specimens in the Museum.

Similar cones, with inscriptions and hieroglyphics, are found in Egypt and Babylonia, the inscriptions on many of the Babylonian urns being so fine as scarcely to be deciphered with the aid of a magnifying glass; and we are all well acquainted with the Egyptian terra cotta and steatite gods, covered with the blue glaze, as well as beads and scarabæi of different colours. There are specimens of enamelled wall decorations from India, but they are of late date—they seem to have been introduced by the Mahommedans about the thirteenth century.

The Greeks were acquainted with the burnt brick and enamel from an early date, which may have been introduced from Egypt. The vases of Sauros were celebrated in Homer's time, B.C. 900, and we have enamelled vases as early as 700 B.C.

Æschylus, in his "Prometheus Bound," tells us that before Prometheus's time, men were unable to build brick houses.

Aristophanes, in his "Birds," gives a very amusing description of the building of a city in mid air, in which he says no Egyptian bricklayers were employed, but the storks were making bricks, and the other birds laying them.

Demosthenes, in his orations about the crown, speaks of bricks; and Pliny mentions that the Greeks, when they might build of flint, prefer brick walls, for they were eternal if they were built upright; and he tells us that the walls of a certain city were of brick, and the Temple of Jove also, although it was surrounded with stone columns. Yet it has been stated that no Greek bricks have been found prior to the subjugation of Greece by the Romans, and with the exception of the terra cotta antifixæ, I do not know that the Greeks ever used terra cotta or enamelled pottery in the decoration of their buildings. At Rome the common houses were generally built of unburnt bricks, while the body of nearly all their public buildings was of burnt brick, faced with marble or stone. If they used brick as a means of decoration, very few specimens have come down to us; although we find that the temple of the Divus Rediculus, in the valley of Egina, is all of brick, beautifully executed, with the capitals of the Corinthian pilasters, and the ornaments and cantalivers in terra cotta, and remains of terra cotta ornament have been found at the Villa of Hadrian, at Tivoli, and elsewhere. Suetonius, in his "Augustus," tells us that Augustus boasted of having left Rome of marble which he found built of brick, a boast which was facetiously applied to Nash as the London Augustus in the following epigram:—

> "Augustus of old was for building renowned,
> For of marble he left what of brick he had found;
> But is not our Nash, too, a very great master,
> He found us all brick and he left us all plaster?"

Among other ancient nations, the Chinese have been celebrated for their great acquaintance with the plastic art. It is needless to mention the great wall of China, built of burnt brick (which much resembles the wall of Media). Its date is about 200 years B.C. The invention of porcelain is said to have taken place about A.D. 1000; or at least the first furnaces for its fabrication were erected about that time. They have used porcelain as a means of decoration. Their tower at Nanking is ornamented with porcelain tiles; and open-work tiles, about 2 feet square, with a greenish glaze, are used by them for dividing their chambers,—a specimen of which may be seen over a shop in Fenchurch-street. It will be useless to enter into any description of brick after the Roman empire, for in all probability the art of moulding and burning bricks was never lost. We find buildings of brick in all parts of Europe, dating from the first century of our era; but I have not examined them sufficiently closely to say whether they were built of the old Roman remains, or of new bricks. In the fifth century the palace of Theodoric, at Ravenna, was built of brick; and nearly the whole of the campanili of that city are circular, and of brick. At Rome all the campanili previous to the Renaissance period are built of brick; and in the towns of Italy we see the cornices formed of moulded brick, or of projecting herring-bone courses, or of series of corbellings. The brick-built towns of Italy soon began to apply art to the terra cotta or brick; and every variety of ornament moulding or sculpture was executed in that material. I should merely exhaust your patience were I to enumerate the buildings at Pisa, Bologna, Siena, Venice, Verona, and hundreds of other towns where ornamental brick buildings may be found.

Mr. Fowler has made many drawings illustrative of the moulded brickwork of Germany, the earlier portions of which are of the fourteenth century. The first modern brick house in England is said to be at Little Wenham, in Suffolk, date about 1260; and there is a house at Cressingham, in Norfolk, the whole of the *traceried* part of which is executed in white terra cotta.

There was, however, a portion of the fictile art almost lost in Europe during the middle ages, that of enamelling in colours on earthenware. Theophilus, who wrote in the twelfth century, in his schedule of the different arts, under the head of "Earthenware Vases painted in divers Colours of Glass," says,—"The Greeks, likewise, make earthenware basins, and small vessels, and other fictile vases, painting them in this manner: they take all kinds of colours, grinding them singly with water, and mixing with each colour a fifth-part glass of the same colour, very finely ground by itself with water, they paint with it circles, or arches, or squares, and in them beasts, birds, or leaves, or any other thing they may wish; after these vases have been painted in this manner, they place them in a window-furnace, and apply a fire of dry beech-wood below them until they are surrounded by the flame, and thus the wood being taken out, they close the furnace; the same vases can also be decorated in places with gold leaf, or with ground gold or silver, if they wish, in the above-mentioned manner."

This shows us that the Greeks of the lower empire were the only people he knew of then acquainted with the art of enamelling on earthenware, for if other nations had been acquainted with this art, this learned monk would not have failed to mention it. It appears, however, that the Arabs were acquainted with this art at least as early as the ninth century, and in their conquest of Spain they carried it with them; the enamelled ware which came from Majorca (where they had established a manufactory) was imported into Italy, and earthenware is even now called Majolica. The mosques of Cadiz, Cordova, the Alcazar of Seville, and the palace of the Alhambra at Granada, are enriched with enamelled tiles of great beauty, which show the advanced state of their keramic manufactures. At Kirkook, between Bagdad and Moussoul, is a minaret covered with glazed bricks, which Mr. Boutcher believes to have been erected as early as the twelfth century. In most Turkish and Persian towns there are still more beautiful examples; at Moussoul there are curious geometrical patterns formed in the parapets to terraces by means of hollow brick tubes, which hide the sleepers from the public gaze, while they allow a free current of the cool night air. Many of the Romanesque churches are ornamented with blue, red, and green basins let into the face of the brickwork. St. Agostino and San Francisco at Pesaro, San Martino at Pisa, San Francisco Bologna, St. Pietro in Ciel d'Oro at Paria, may be mentioned as examples, but these are not considered to be earlier than the fourteenth century. In 1388 was born Luca della Robbia, who, after having practised as a sculptor for some years, found he got so little by his profession, that he thought he would try some other plan for making his fortune; "for, considering," says Vasari, "that clay was easily worked and with little fatigue, and then only wanted the finding a means to preserve it, he went thinking about it so long, that he found a means of defending it from the weather, by giving it a glazed coating made with pewter, terraghetta, antimony, and other minerals and mixtures, baked in the fire of a fur-

nace." The first works he executed in this glazed terra cotta were the bas-reliefs over the sacristy doors at Sta. Maria del Fiore, at Florence. These were covered with a white glaze, but afterwards he was enabled to colour them with blue, green, and yellow; and all Italy is filled with these works, either done by him or his pupils. In the cathedral at Arezzo there are several coloured bas-reliefs, and the frieze of the hospital at Pistoja is entirely composed of coloured bas-reliefs in the Luca della Robbia ware. In one of the churches, I think at Siena, there is St. John the Baptist's head in a charger, executed in its natural colours, and its ghastly resemblance to reality makes it a thing never to be forgotten. The last of his race, Girolamo della Robbia, it is said, made the bas-reliefs, &c. of the Château, Madrid, for Francis I. After his time bas reliefs, in coloured and glazed earthenware, were common throughout Italy. Madonnas are found in the walls at Assisi, and elsewhere; and I found the spire of a church built of common red brick, glazed with white, yellow, and green bricks, in the form of a truncated cone. At Amalfi, Capua, Naples, &c. most of the churches are covered with coloured tiles or bricks, as well as throughout France, Germany, and Belgium. And since the end of the sixteenth century, the art of manufacturing porcelain has become generally diffused through Europe; and I suppose that England may now boast that she can equal in fineness of material or colour, the pottery of any nation that now exists, or ever existed, while her designs have never equalled those even of the Chinese now so celebrated throughout the world, in the willow-pattern plate. Of cut brick I have said nothing; the folly of cutting a material in a hard state, when it can be moulded in a soft state, is too apparent to need comment.

It was but a few years ago that bricks and mortar were despised, and considered to be incapable of producing any architectural effect; and strange to say, the very despisers of this material are those who now cry out against sculpture, ornament, and colour, and tell us that architecture depends on proportion only. As an advocate of brick, I say, if you require proportion only, the use of bricks will not spoil the proportion of your building. The Castle of St. Angelo, at Rome, is surely imposing, though stripped of its coatings of marble and bronze; there is the Campanile of St. Mark's, and the interior of the Colosseum. Dante did not think the brick tower at Bologna was wanting in grandeur, when in one of his finest similes he compares Antæus Virgil and himself to this tower when a cloud passes across it.

And I think we shall find among the most imposing buildings of London the brick walls of the warehouses, the shot-towers, and the railway chimneys. But for architecture as a fine art we want something more than proportion,—we want ornament, and sculpture, and colour. A few mouldings from the curve of a shell, a leaf, or a stone, to give harmony and gradation to the lights and shadows, and we have the art of Greece, or of France and Italy in the thirteenth century. It is true that brick or terra cotta does not readily adapt itself to tracery or the pointed arch, and is totally unfit for circular columns of small dimensions, but we can substitute plate tracery, as at Pisa, and marble columns, and the pointed arch *may* be executed in brick, as at Siena, or better in terra cotta; or we may use round arches, with the smaller openings pointed in slabs of terra cotta, and for vaulting over any large span with a pointed arch there is no inconvenience in the use of brick. But the plastic nature of brick seems entirely to have escaped us; no one seems to have been struck with this fact but Luca della Robbia and the Chinese. We might take one of the commonest types of a London house, with two windows on each floor, with a circular head over each window, and fill it with a slab of bas-relief, or a pierced panel; the edges of the window-openings might be moulded; with openwork filling-in at the bottom of the window, bands of sculpture or foliage might be placed above the ground-floor; the rain-water pipes might be composed of stout earthenware, twisted, ribbed, or otherwise ornamented and gilt, with leaves or flowers at the junction, a slightly projecting band of ornament or colour for the cornice, and open parapets. If we complain of darkness in our streets, we may have the fronts of our houses entirely of white glazed tiles, or ornamented with bands and zigzags of colour; we may have them painted with frescoes like the Venetian palaces, but imperishable; we may cover our plastered fronts with mosaic, or with bulbs of fretwork like those at St. Mark's. And it is to the art workmen, and to all who may have the opportunity of employing them, that I would point out the advantages of brick. The cultivation of art is, in my opinion, the greatest benefit we can confer on any one; but it is a more especial benefit to those who are not gifted with that transcendant genius which will rise and make itself known and appreciated, in spite of every adverse circumstance. By cultivating art among those who are more particularly doomed to earn their daily bread by daily labour, we encourage a taste for the beautiful which brings with it its own reward; we encourage that individual exertion which raises and pleases at the same time, and enables the humblest to so far immortalise himself, that he may cause in after ages pleasure to thousands, while he is perpetuating the curl of a tendril or the expression of a face. We have at hand an inexhaustible supply of plastic material that merely asks us to mould it in any form of beauty that we love: it asks us to indulge in that instinct of our nature, never to repeat, but that every fresh piece shall have some difference from the piece that went before, or shall come after, in every foliated moulding, slab, panel, or spandril: it invites us to give with the same general form an endless variety: it gives to the sculptor a means of sketching out his burning thoughts, almost as rapidly as they come to him, and of fixing them so that they shall outlive marble and brass; it gives to the architect the means of decoration at a cost that cannot be attained by any other means,—the facility of plaster, the durability of granite. Every man may have his house decorated with the history of his life, his occupation, or his aspirations; our public buildings with their history and their viscissitudes; it gives to the flowers of our country an undying record on our buildings, to our heroes a reward for their toil and their sufferings; it affords to our people and our children a history that he who runs may read; and it may give to our city a series of historical sculpture which Nineveh or Athens never possessed; while we may paint and gild in imperishable colours the fronts of our houses, we may fill them with the finest fretwork, purer than alabaster and as enduring as adamant; we may set them over with jewels that shall glow like the liquid fire in the setting sun.

G. Aitchison, Jun.

OPEN FIRE-PLACES AND THEIR CONSTRUCTION.

At a meeting of the Royal Institute of British Architects, April 14th, a Paper on this subject was read by Mr. S. E. Rosser, in the course of which it was said;—That the position of the fire near the hearth is of the utmost consequence to the efficiency of any grate. This position lessens the direct radiation upon the faces of persons sitting near the fire, and throws more upon the legs and lower part of the body. The property of warmed air to ascend renders it necessary, for the general warming of a room, that the fire should be as low as possible, because heat, though readily carried upwards, cannot be communicated downwards. Hence the difficulty with the old-fashioned grates, mounted up 15 or 18 inches from the floor, of heating the air of the room below the seats of the chairs.

But an attempt has lately been made to revive the fashion of putting the fire half-way up the chimney, and it has been argued when it is considerably above the floor it will be in a better position to radiate downwards than when nearly on a level with it. This argument, however, is based upon an imperfect appreciation of facts. If the fire were a globular body, equally incandescent over its whole surface, the amount of heat radiated from its underside would be as great as that thrown upwards or forwards. No fire-place, however, that has yet been constructed is equally incandescent on all sides.

The Staffordshire fire-place, as it has been termed, is the nearest approach to the globular form, and it throws out more heat from its under surface than any other fire-place. The bottom of an ordinary grate is a mass of iron-work, which intercepts any amount of radiation; and this iron-work does not even become tolerably warm, because it is kept cool by the current of cold air rushing over it to feed the fire. Moreover, the space between the bottom bar and that immediately above it is commonly filled with dead ashes and dust, which materially impair the efficiency of this part of the fire, even to radiate heat in horizontal lines. The more we consider these facts, the more we shall be convinced that it is only the upper surface of the fire, and that portion of the front which is comprised between the two upper spaces of the bars, that are of any value in regard to radiating power.

Air-flues constructed in the chimney-breasts when a house is built would materially promote the comfort of the inhabitants. These flues might have openings at bottom communicating with the external air; and, if they were carried up alongside the smoke-flues from the different fire-places, or connected with the void spaces round the grates, a considerable portion of the waste heat, usually escaping by the chimney, would be communicated to the air in the flues. Apertures should be made into them at their upper part to communicate with the various rooms, and a continuous supply of tempered air might thus be provided to maintain salutary ventilation, to supply the requisite quantity of air to the fires, and to afford an increased degree of warmth.

Referring to Cardinal Polignac's statement as to the three modes in which the heat of burning fuel may be rendered serviceable for warming, viz. by radiation, by reflection, and by conduction; they may be combined to produce an effect very different from that of the stoves to which Dr. Arnott's remarks applied.

By the use of fire-brick linings, and by placing the aperture for the escape of the smoke at the back of the fire, we increase the intensity of the combustion, and the consequent radiation.

By the use of reflecting surfaces we ensure nearly all the radiated heat being directed into the room.

By placing the fire upon the hearth, and by properly arranging the conducting materials, we greatly increase the amount of radiation, and destroy the cold foot-bath which accompanies a fire raised much above the floor; while, by introducing warm-air chambers and caliducts, we abstract a large portion of heat from the smoke, and employ it to warm a supply of fresh air for the room, which prevents cold chink winds, one of the principal objections against the open fire-place, and corrects the tendency to unequal heating which arises when we depend on radiated heat alone.

By diminishing the quantity of air escaping up the chimney, we reduce its liability to smoking.

By the use of sunk ash-pits or concealed ash-pans, in conjunction with low fires, we prevent the dust being diffused into the room.

As regards bad ventilation, it is by no means evident that this asserted objection to the open fire-place is correct; but granting that the fire-place ought not to be the only means, modern practice has given us numerous contrivances by which efficient ventilation may be obtained; while, on the other hand, it is certain that so long as we allow the fire to draw its supply of air from the room, we must have some ventilation. As much disappointment is often occasioned by the want of knowledge as to the points which constitute a good stove, the following remarks are offered in the hope that they may be found useful.

1. The fire should be as near the floor as possible.
2. The opening of the front should be low.
3. The grate should be lined with fire-brick.
4. A shallow fire, with a large upper surface, is better than much front with a contracted upper surface.
5. A stove from which the smoke escapes

from the back is better than one from which it rises directly into the chimney.

6. A contrivance for regulating the quantity of air escaping up the chimney is very desirable.

7. The use of a blower in any form is only waste of fuel.

The following rules for setting stoves may be found of service.

1st. To let no air enter the flue, except what passes through the opening provided for the escape of the smoke. If it be desired to have a ventilating opening into the flue from the upper part of the room, the propriety of forming it will depend upon the draught which ordinarily exists in the flue. It will generally be better to use an unoccupied flue for the purpose of ventilation.

2nd. The grate should be kept as much forward into the room as is consistent with appearance. It is a mistake to suppose that it is more likely to smoke when brought well forward than when pushed back into a recess, provided cross draughts are avoided.

3rd. The flue in common register stoves should be brought down of equal dimensions perpendicularly over the fire, the register contracting the opening at the bottom, or, where the escape of smoke is at the back, the flue should be brought down at the back of the grate, and be made perfectly air-tight.

The gathering wings usually constructed over the openings of fire-places are perfectly useless.

In conclusion, it may be remarked, that with the improvements introduced into modern grates, the heat afforded for the warming of a room ought materially to exceed the proportion stated by Dr. Arnott, whose observations seem to have been made upon stoves of an imperfect construction.

A discussion ensued at the close of the paper from which the above is taken, and

Dr. Arnott, visitor, observed that the theory and principles of combustion were frequently quite opposite to the facts which occurred in the action of chimneys. He had no doubt that with some further study of the subject some of Mr. Rosser's opinions would become changed. With regard to low fires, it would be found by placing a thermometer on the floor, that a fire on the hearth did not dart a single ray of heat upon the carpet. The whole of the heat of a low fire would be found to ascend, and the feet of the people sitting in front of it became cold. Many of the opinions advanced on the subject of fire-places were no more true than the old opinions, that the sun rose and set instead of the earth turning round. M. Peclet, whom he had seen in Paris, had told him that the normal condition of all the chimneys in Paris was to smoke. The dearness of fuel caused the people there to keep their fires half smothered, and to shut the inside of the chimneys, and let the smoke into the room. The smoke, indeed, was made so cold by the channels round the fire, that the necessary intensity of ignition was prevented; so that less heat was obtained from the fire, and the smoke was so cold that the external atmosphere was not sufficient to make the chimney act. The tops of all the chimneys in Paris exhibited in a striking manner the distress of the inhabitants, by the great variety of cowls which ornamented them. He described the effect produced by substituting, in his own drawing-room, a low fire-place (the very best which a good ironmonger could supply), for one that was raised above the floor. He found with the low fire the cold affected his feet most severely. He considered a grate should be raised about 14 inches from the floor.

Mr. C. H. Smith observed that the horizontal shelf behind the Staffordshire grate he considered a very good contrivance. Most of the inns, and many private houses, in Yorkshire, had a similar arrangement, the shelf holding a sufficient quantity of coals to last all day. Reasoning upon this arrangement, he had been induced in his own house to adopt the plan of warming the coals beneath the grate before placing them upon the fire, and he found the combustion more perfect, and the smoke much less in consequence. His fire-place was upon a plan of his own,—the front of the bars being in a line with the front of the chimneypiece, and therefore in advance of the walls of the room. This grate drew exceedingly well, but was liable to disturbance from cross draughts.

Mr. Baker mentioned a case in which he had adopted one of the Farnley Company's fire-brick fire-places in the shape of a niche. The hearth, which was of fire-brick, was raised 3 inches above the floor: cold air was admitted underneath. The fire-place was made upon Leslie's principle, without any false front. The fire-brick consumed the smoke that was generated; but he found it was necessary to keep the hood thrown back, in order that the smoke might pass up the chimney. This stove, which was 22 inches wide, warmed perfectly a room of 40 feet by 24. The fire-brick itself was not, however, a satisfactory specimen.

DRAUGHTS IN CHURCHES.

OPEN ROOFS.

THE false roof referred to by your correspondent would be the most effectual remedy against such portion of the draughts as owe their origin to the leaky state of the lofty open roof.* Felt, however, applied between the boards and the slates, forms a very efficient protection. The kind of felt used should be the "No. 2 dry hair boiler-felt," the sheets laid close together at the edges; or better still, two thicknesses of 12-oz. felt, the sheets breaking joint. Churches with lofty open roofs are particularly liable to be draughty, and if they are not counterceiled between the rafters, the use of felt on the outside of the boarding is indispensable, more particularly if the church is intended to be artificially warmed. Hardly any amount of heating surfaces can render a church with a leaky roof tolerably warm. Your correspondent is correct in his surmise, that roof-draughts are not wholly caused by the cold air coming through the slates into the church. Lofty open roofs, even if all communication through them between the external and internal atmosphere be prevented, will still create draughts, from the cooling effect which their internal surfaces exert upon the body of air in contact with them. In cold weather the extent of roof exposed to the action of the wind parts with so much heat (although the boards are not very good conductors) as to cool the air in contact with the underside of the boards with great rapidity, and to create descending currents of cooled air, the velocity of which increases in proportion as the building is more lofty. A good lining of felt between the boards and slates will go far to prevent the transmission of heat from the interior. In a church now building under the superintendence of an eminent architect, the lining of felt is interposed between two thicknesses of boards, and the slates are laid upon battens placed longitudinally upon the outer stratum of boards. This is perhaps the best kind of roof that has been adopted, as the battens, when laid longitudinally, prevent the passage of currents of air in an upward direction under the slating.

When, however, all has been done that can be done to render the roof perfect, your correspondent will find that if the church be artificially warmed in any of the ordinary modes, the draughts will still prevail.

It has been common to refer these draughts to imperfections in the glazing, because they are more particularly experienced near the windows. The cause, however, lies in the transmission of heat by the glass to the external air. This cools the particles of air which are in contact with the inside of the glass, and with such rapidity, that it has been found that one foot superficial of glass will cool one cubic foot of air per minute, as many degrees as the internal temperature exceeds that of the outer air. The air so cooled by the action of the glass is contracted in bulk, and thus becoming heavier, descends in a current against the window until it reaches the sill, where, its farther progress in a perpendicular direction being arrested, it is deflected across the church just about the level of the heads of the congregation. In new churches this evil may be prevented by providing channels in the breast of the window, by which air warmed in the basement may be carried up and discharged at the level of the sill. The air introduced at this point being warmer, and consequently lighter than the general air of the church, has a buoyancy which carries it upwards for some distance, until it meets the cool current descending from the upper part of the window, with which it unites and dissipates it. Or the process may be reversed, and the cooled air may be allowed to continue its descent by the flues formed in the window breast as described, and thence conveyed by channels beneath the floor, to feed the warming apparatus in other parts of the church.

Where some such arrangements as these cannot be contrived, there is no remedy against window-draughts but by placing coils of hot water pipe at the windows, or carrying a continuous pipe all round the church at the level of the window sills. These facts explain a very common remark that churches warmed by artificial means are always more subject to draughts than buildings in which no warming is attempted, the draughts generally increasing in intensity with the elevation of the internal above the external temperature. S. EGAN ROSSER.

* Three correspondents have addressed communications to us with special reference to the particular church supposed to be alluded to by "AN INVALID." We prefer, however, to keep to the general question.

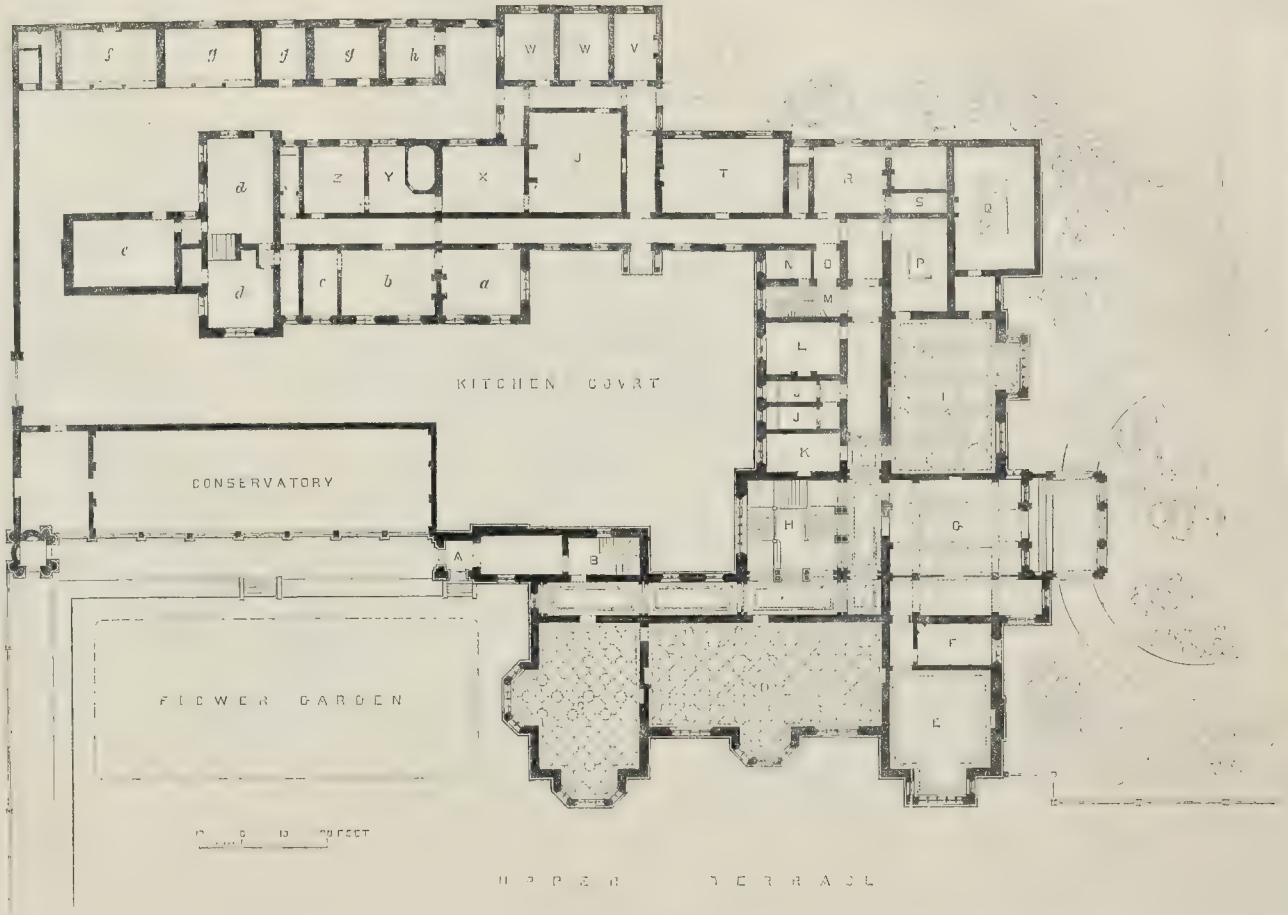
ST. JOHN'S-GATE, CLERKENWELL.

WE understand that upon removing some modern dwarf wainscoting in St. John's-gate, an interesting discovery has just been made of one of the original stone Tudor chimney-pieces, and a singular communication from the groined archway to the hall, or large room above. The chimney-piece is neatly moulded, and has spandrils containing cruciform gilt ornaments: the opening of the fire-place is 4 feet 6 inches by 4 feet 2 inches, and the stone is the same as that of which the gate is constructed. Over the chimney-piece is a relieving arch. The secret-chamber occurs in the inner side-wall: the latter is 3 feet 4 inches thick, and the chamber is 1 foot 11 inches wide, and 2 feet 9 inches in length. At the base of the chamber, or shaft, is an arched opening (now filled up), communicating with the open archway beneath the gate, and the top of the shaft is immediately under the floor of the hall. The chimney-piece is to be restored, and the chamber preserved intact.

We may mention that Mr. W. P. Griffith is preparing for publication, plans, elevations, and sections of St. John's-gate (as it originally existed in 1504); also of the crypt under St. John's church, with the boundary walls of the priory, and particulars connected therewith; so as to preserve an accurate record, and, if possible, rescue this once large establishment from the destroying hand of modern improvements and time.

COLESBORNE HOUSE, GLOUCESTERSHIRE.

COLESBORNE HOUSE, situated in the valley of the Cole, seven miles from Cheltenham, in the county of Gloucester, the residence of J. H. Elwes, Esq. has been completed from the designs of Mr. D. Brandon.



The style of architecture is similar to that of which there are many examples of manor and other houses of the beginning of the seventeenth century. The terraces are being carried out in the same style: the walls are constructed throughout of local sand-stone, with the exception of the cornices, and the transomes and mullions of the windows, which are of Bath stone. The principal staircase having a handsome window by Willement; the panelling and other joiners' work of the ground-floor are of oak; the dining and drawing-rooms having parquet floors supplied by Messrs. Steinitz and Co. The corridors communicating with two stone staircases, are of fireproof construction, upon Mr. Barrett's principle.

The arrangement of the rooms and offices on the ground-floor is shown in the accompanying plan of the building. The upper floors are appropriated for a boudoir, bed-rooms, dressing-rooms, and nurseries.

The height of the floors is as follows:—ground-floor 16 feet, first-floor 12 feet, second-floor 10 feet. The wine, beer, coal-cellars, &c. are in the basement.

Messrs. Piper and Son were the contractors for the work; the local stone, lime, and bricks, being supplied for their use.

A. Garden-entrance.
B. Private staircase.
C. Drawing-room.
D. Library.
E. Morning-room.
F. Waiting-room.
G. Entrance-hall.
H. Principal staircase.
I. Dining-room.

ggg. Wood, coal, & coke stores.
h. Game larder.

PLAN OF COLESBORNE HOUSE, GLOUCESTERSHIRE.

COLESBORNE HOUSE, NEAR CHELTENHAM.—Mr. D. Brandon, Architect.

THE PRODUCTIVE FORCES OF RUSSIA.*

Russia has been taught a lesson she cannot and will not forget in a hurry, whatever be the intrinsic value of the treaty of peace to which she has just been compelled to assent; and, doubtless, much more dependence may justly be placed in the result of that lesson than in the words or the concessions of any treaty. The grand effort of the present generation of Russians to carry out a notorious purpose *has been made and has failed.* No single generation of men is ever likely to repeat such an effort, whatever their posterity, not instructed by the struggle, may hereafter do; and in the failure of the past effort, and not in the treaty of peace, rests Turkey's future safety, so far as regards Russia, for many a day. It must be a future Constantine, and not the present, whose baptismal name shall truly proclaim him the destined king of Constantinople and its dependencies.

The part that we have taken in teaching the Russ this effective lesson will hereafter appear more brilliant and overwhelming than it now does. It will then be more clearly seen than it yet seems to be that our naval power did much more than the military power of the French towards the end in view. Had the French military power been so irresistible that the Russians had not dared to face it, and had retreated within the shelter of their desert steppes, would not this have been a virtual defeat of the Russians that ought to have redounded far more to the military renown of France than the taking of the Malakoff? And did not the late Czar frankly and publicly declare to "all the Russias" that the great and peculiar war-power of Britain—her naval power—was "invincible?" And was it not on account of this very invincibility that Russia fled the ocean altogether, and that Britain was thus afforded no opportunity of earning the brilliant but miner renown of vanquishing the foe in her own peculiar field of war? It yet remains to be seen, moreover, whether the rapid and immense augmentation of the naval forces of Britain preparatory to a new campaign against even the stone walls, the shallows, and other shelter of her fleets and coasts, did not contribute more than anything else (combined with the injury done, by the British mainly, to her commerce) towards the final defeat of Russian obstinacy, pride, and aggressive ambition. It is not our part here, however, to enlarge on such subjects. We have a more peaceful purpose in view than even the fighting of battles over again. Besides, the allies and their powerful foe have shaken hands, and to a certain extent are friends again: henceforth, let all strive together in the arts of peace, and let us even lend a willing hand to assist our former antagonist in carrying out that grand system of peaceful aggrandizement within her own territories, on which she now appears to be resolved; taking care, however, not to *forget* her past behaviour.

The return of peace, and the devotion of Russia and its ruler to the development of internal resources, would seem to have been anticipated by the sagacious publishers of the English version of the important and instructive work here under notice, so well timed is its issue; and the author himself must feel that his work is just the desideratum of the present critical epoch in Russia's history. We have very little doubt that by this time the book in question has been earnestly and interestedly perused and studied by the new Czar himself, who appears to be actuated by a more peaceful, civilized, and enlightened spirit than his fire-eating father, to whose moloch-like spirit of destruction so many thousands—we had almost said millions†—of his fellow-creatures have been sacrificed.

M. Tegoborski, in this second volume of his "Commentaries," treats of the manufactures and the commerce of Russia. The volume opens, in a continuation of the second chapter of the work, with an account of the woollen, silk, and cotton manufactures: those of a chemical description, that of leather, paper, and various others follow; then metallic manufactures, pottery, cabinet-work, &c. The third chapter is devoted to commerce, and the fourth to maritime navigation.

We shall take a slight dip here and there into some of these various subjects, especially as regards the manufacturing industry and resources of the Russian empire; premising that M. Tegoborski appears to be actuated by rather a liberal spirit, as regards questions of free-trade, competition, &c. and does not display much tendency to undue partiality or prejudice in his views; on the contrary, treating of his various subjects in apparently a fair and equitable spirit.

A distinguished technologist used to say that one might judge of the amount of industry in a country from the quantity of sulphuric acid that it consumed. The author, aware of this, gives some statistics on the subject, under the head of chemical products, to which we may briefly advert in the outset. The dearness of sulphuric acid long exerted an adverse influence on the extension of manufactures in Russia, and even yet the price is comparatively very high, being 1 rouble 20 kopecs per pood, which the author contrasts with the price in France, which he states to be about 70 kopecs per pood. About twenty years since, however, the price in Russia was 5 to 5¼ roubles per pood; and if such a price had still prevailed, it would doubtless have been a complete extinguisher to various important branches of manufacture which already begin to spread throughout the country.

Leather, one would have thought, must be a very flourishing and advanced branch of manufacture in Russia; yet it is not so: on the contrary, M. Tegoborski remarks that, "strange to say, our leather manufacture has remained in the rear of every other; and, whilst the cotton manufacture adopts every new improvement as it arises, the former still keeps drawling along in the same routine that it followed 100 years ago and more." He complains of the want of that capital which is requisite from the tediousness of the processes: were the latter improved and expedited, doubtless the want of the former would be of less importance. The bright side of this manufacture is the fabrication of "youfts," or Russia leather, to the prosperity and continuance of which the abundance of birch and its peculiar tar essentially contribute. About 250,000 poods of this leather, valued at 3,400,000 roubles, are (annually, we presume) manufactured, chiefly in the governments of Nijni, Nowgorod, Wladimir, Twer, Perm, Jaroslaw, Pskow, and Orel. Three sorts, red, white, and black, are manufactured, the red being the most important, on account of the abundance of birch tar used in *its* preparation.

Iron is the lever of every other species of industry, and the extent of its consumption affords a pretty fair index to a country's wealth, and the development of its productive forces. M. Tegoborski remarks on this subject, that "the prohibitory system, with a view to the protection of native iron, was long in vogue; but by degrees the conviction everywhere arose, that it was inexpedient to sacrifice all other interests to this one,—often, too, without even benefiting the latter; for experience showed that when the stimulus of competition was removed, the manufacture lagged behind in its methods." Again he says,—"Most of our iron-masters, reposing on the cushion of protection, long neglected to follow the progress of this industry in foreign countries; and any improvements introduced have been very recent and very exceptional." The increase of production, therefore, has been very trifling, and the reduction of prices very small. The perennial average production of pig iron in 1831-33, was 10,515,170 poods, and in 1849-51, it was only 12,638,540 poods. Of bar iron, the triennial average production in 1837-39, was 6,930,000 poods, and in 1849-51, it was 9,141,845 poods. The triennial average price of common bar iron at St. Petersburg has been nearly the same ever since 1824, namely, about 1 rouble 25 kopecs per pood. The author contrasts this unprogressive stability or stagnation of price, with reductions successively made in England, but he has mistaken mere gambling fluctuations for steady and permanent reductions of price attained by means of improvements in manufacture: thus he quotes 5*l.* 15s. per ton as the price of bar iron in England, reduced from 9*l.* and 10*l.* 10s. in 1836-40, "from the adoption of improvements in the process of production," whereas bar iron with us has returned to these very prices of 1836-40, and may, six or eight months hence, be down again to half the sum.

Formerly, Russia exported iron to the extent of 2,300,000 poods: this exportation gradually decreased to one-third of that quantity; but previous to our blockade of Russian ports 700,000 to 800,000 poods were still exported. The fact that any such export of iron at all from Russia still takes place is doubtless to be attributed to the decided superiority of iron made with charcoal, as it is in Russia, where coal is a very rare commodity, of which men of science in fact are only still in search. The author complains much of the bad state of the means of communication in the interior of the country as a great hindrance to the progress of this as well as of other branches of manufacture. To this evil, however, the eyes of the Russian Government are now sufficiently open, whatever be the real motives which are inciting them to their alleged resolution to interlace the interior with railways and roads. The formation of the former must tend greatly to promote the home production of iron in Russia, whatever aid England may be called upon to give towards the end in view.

The state of the iron trade in Russia is forcibly exhibited in the following quotation:—

> "The high price of iron is a great evil, both for agriculture and for most branches of industry,—a truth so generally recognised that it seems trivial to repeat it. Experience has also shown that there are few articles of which the consumption is so elastic or so much regulated by price. Where cheap, as in England and the free ports of Germany, it often takes the place of wood and stone; where dear, wood usurps the place of it, even for those purposes for which the use of iron seems the most natural of any. We find in the rural buildings of our western provinces wooden nails taking the place of iron nails; and even amongst easy, if not wealthy proprietors, we find locks and bolts at park gates and garden doors, and sometimes at barn doors too, replaced by wooden latches, and hinges by osier rings, by which the doors are hung upon the posts, whilst their richer brethren, who use the metal article, grumble sadly at its price. Throughout a great part of the empire, farm-horses are without shoes and farm-carts without tire; axles are of wood; spades of wood covered with a thin coating of iron; and in many districts the ploughshare itself is wood with an iron point. Implements of that description were to be seen at the St. Petersburg show of agricultural products in 1850. The partisans of the prohibitory system allege that in many provinces the shoeing of the horses and the use of iron in the peasants' carts would, from the quality of the soil, be totally useless,—in fact, rather hurtful than otherwise: but we think such assertions as these scarcely require a serious refutation."

In regard to absolute quantity of iron produce, M. Tegoborski places Russia in the third rank; its production, he calculates, being to that of England as 100 to 1,018; to that of France as 100 to 219; to that of Austria as 100 to 82; and to that of Prussia as 100 to 50: in regard to relative production and consumption, however, he admits that Russia ranks lowest of any of these nations.

The Uralian mines are believed to contain iron ore enough to last for an indefinite period, but their working is limited by their command of fuel. Strata of coal, however, it is said, have lately been discovered in the Ural.*

The author advises the admission of foreign iron in competition with that of home manufacture, under certain modifications of import duty, particularly as regards pig-iron. Russia, he remarks, is at present the only country in which the importation of iron by sea is still prohibited. The admission of foreign iron, he points out, would give a great impulse to the home construction of machinery, now imported, at great cost, to the value of nearly three millions of roubles. In regard to English iron, however, the invasion of which, he adds, is chiefly formidable to Russian iron-masters from its low price, the imposition of a duty is suggested, such as would prevent its successfully

---

* "Commentaries on the Productive Forces of Russia." By M. L. De Tegoborski, Privy Councillor and Member of the Council of the Russian Empire. In three volumes: Vol. II. London: Longman, Brown, Green, and Longmans, 1856.

† In the one war just closed, it now appears that 500,000, or half a million, of the Czar's *own subjects alone* were thus sacrificed!

* Efforts, we may here remark, are being now also made to discover coal wherewith to supply the steam fleet of Russia.

competing with their own in the markets of the interior, leaving for its market the country within a certain radius of the coast.

In 1852 there were in Russia eighty-five iron works belonging to individuals, of which thirty-nine were in the government of Perm, seven in that of Orenburg, seven in that of Wiatka, and twelve in that of Kalouga: the other twenty were distributed over the governments of Wologda, Wladimir, Nijni-Nowgorod, Orel, Penza, Riazan, Tambow, Toula, and Kostroma. The Crown works are comprised in the six mining districts situated in the governments of Tomsk, Irkoutsk, Perm, Orenburg, and Olonetz, producing about two million poods of pig-iron, or 15 per cent. of the total production of the empire, without reckoning Finland and the kingdom of Poland. The eighty-five works belonging to individuals are in the hands of fifty proprietors or companies.

The manufacture of tools for the different trades is not in a very forward state. Its chief seat is at Toula. At Zlatoust, however, superior articles are made. Files à l'Anglaise have been manufactured, but the nicer sorts are still imported from England or France. The manufacture of locks and padlocks still leaves room for improvement: it is chiefly carried on at Pawloff, Toula, Jaroslaw, Moscow, and St. Petersburg. Padlocks, costing 2 to 35 kopecs each, are exported to Asia. The manufacture of cast-iron articles and machinery is far in the rear of its relative importance. Till of late there was only one large establishment of the kind (at St. Petersburg) except the crown works for the navy and army.*

PROVINCIAL NEWS.

Oxford.—The committee appointed by the Street Commissioners to carry out Mr. Faulkner's motion for the erection of two fountains, to commemorate the acquisition of peace, on discussing the subject, were unanimous in favour of erecting a fountain in St. Giles's, on the site where it had been agreed to erect a flushing apparatus and tank for flushing the sewer leading from St. Giles's to Magdalen-bridge; and it was unanimously resolved "That it is desirable that the flushing apparatus should be above ground; that the chief objection to such a structure above ground would be the unsightliness of it; and if this objection can be removed by making, through private subscription, a fountain, such a combination is highly desirable." It was, therefore, resolved that 200*l.* having been stated by the surveyor to the Board as the sum necessary for a mere flushing apparatus, the committee recommends that this sum be appropriated for such necessary work. They also recommend that this sum should be expended in co-operation with any general committee which may be appointed to conduct the erection of a fountain.

Andover.—On Tuesday in last week a large new stable fell, which had only been completed a very few days, in the yard of the Eagle Tavern.

Dudley.—The tender of Messrs. J. and G Lilly, of Measham, for the erection of the new workhouse and industrial schools (11,441*l.* and 2,553*l.* odds) has been accepted.

Bristol.—The *Bristol Times* revives a project for a new street, in two divisions, one from College-green to the top of Brandon-hill, and the second from the top of Brandon-hill to Clifton-hill. A road thrown over a series of arches from College-green to Brandon-hill, and likewise on arches from Brandon-hill to Clifton-hill, would, it is remarked, make the grandest street in the kingdom, "conducting people from the collegiate precincts of the old city, to that most noble of prospects, now to be enjoyed from Clifton Church."

Swansea.—On the 12th of May last, being Whit-Monday, the foundation stone of St. Peter's chapel of ease to the mother church of St. Mary, was laid by Mr. H. Hussey Vivian, M.P. of Singleton, Swansea. After the ceremony, the company was addressed by Mr. Vivian and the Rev. E. B. Squire, Vicar of St. Mary's parish. The edifice, which is to be of a plain, but substantial character, is a parallelogram in form, the internal dimensions being 77 feet by 25 feet. The chancel is formed by a continuation of the nave, and is principally distinguished by the treatment of the ceiling. There will be a porch on the south side, and on the north a vestry, with a heating chamber beneath. A bell gable will be on the west end. The roof is constructed with arched principals, and is open to the ridge, the ceiling being formed between the rafters, except over the chancel, which is to be boarded in an arched form. The style of architecture adopted is Transitional of the thirteenth century, immediately following that known as the "Early English." There is accommodation for 307 persons, including a gallery at the west end intended almost entirely for children. The whole of the sittings are free and unappropriated for ever. The subscriptions and grants received from the Church Building Commissioners amount to 750*l.* leaving a deficiency of 750*l.* the whole cost for the completion of the church being 1,500*l.* The architect employed is Mr. R. Kyrke Penson, and the builder is Mr. Joseph Richards, of Swansea.

Manchester.—A warehouse which is approaching completion in Portland-street, will be the largest building, it is stated, amongst the many already large ones, in Manchester devoted to mercantile purposes. It is being erected for Messrs. I. and S. Watts, merchants and manufacturers, Fountain-street, by by Messrs. Travis and Mangnall, architects. The dimensions of the building are 300 feet by 90 feet. It is seven stories high, and above 100 feet in extreme elevation. The architecture is Venetian, the windows of each story being of different construction, yet the whole façade, according to the local *Courier*, harmonising into one general effect. There are two principal entrances in Portland-street, one of which is opposite York-street: they are surrounded by pillars, with stone ornaments, and lead to vestibules, through three glass doors, from whence rise the principal staircases, which are three yards wide. The interior of the warehouse is lighted by five areas, and the roof is nearly all glass. At the back in Silver-street will be the offices, and a loading area, capable of accommodating two lurries at a time: there will also be a fire-proof staircase. As the chief precaution against fire there will be a large cistern at the top of the building for holding rain water. Hose will be placed on every floor, and other means taken to keep fire in check until the arrival of firemen. There will be two hoists in the building, one for raising goods and distributing them, the other for carrying them down when sold. Lavatories and other arrangements will be found on each floor, and more generally on the basement. The building was commenced early in 1855, and is expected to be finished in about eight months. The distinctive architectural features of the erection consist of four tower-like elevations fronting Portland-street, and which extend across the building, forming the seventh story, the windows in which will have the mercantile advantage of northern light. The visible parts of the warehouse will be of Yorkshire and Derbyshire stone; and the windows will be filled with plate glass. The area on which the building stands is about 3,000 superficial yards. There will be virtually three warehouses in one, Messrs. Watts occupying the principal portion.

Alnmouth.—The works connected with the erection of a new bridge across the Aln here are about to be commenced. At a recent meeting of the general committee of this undertaking, held on the 13th inst. the subscription lists were examined, from which it appears that sufficient funds have been collected for the erection of a narrow bridge; but that it would require 150*l.* in addition to the sums received, to build one of the width desirable for the accommodation of the public. It was resolved that the works be proceeded with according to the plans and specifications of Mr. F. Charlton, the engineer, upon the principle of a broad bridge; and that, as the contractors had engaged to erect a foot-path across for passengers, by 1st June next, this footway be completed and opened to the public on that day, and a toll of one penny taken from every person passing, in order to assist in making up the deficiency of funds required for erection.

* To be continued.

THE PRINTERS' ALMSHOUSES, AT WOOD-GREEN.

THE new Asylum, at Wood-green, Middlesex, is to be inaugurated on the 11th of June, by a public breakfast, to take place on the grounds of the Institution, at mid day. Earl Stanhope, who laid the foundation stone, is to preside on the occasion. There is an excellent list of stewards, even already, we are glad to see, including Messrs. Clowes, Mr. John A. D. Cox, Mr. Figgins, Mr. Henry Hansard, Mr. T. R. Harrison, Mr. H Ingram (M.P. for Boston), Mr. John Murray, Mr. W. Rivington, Mr. T. Spalding, Mr. W. Spottiswoode, Mr. Charles Whittingham, Mr. T. Longman, Mr. Charles Wyman, and many more. Mr. Douglas Jerrold, Mr. Mark Lemon, and other well-known literary men, we learn, have promised to attend. There is to be an evening-party, too, on the same day, when Mr. William Clowes will take the chair.

We some time since gave an engraved view of the new Almshouses, it may be remembered. They occupy a fine healthy suburban site, and will afford comfortable accommodation to the pensioners of the Institution.

It is the bounden duty of all who are concerned in the advancement of literature to interest themselves in the success of this Institution; and in the general term literature, we intend especially to include that modern power in the state,—the newspaper press,—and who is there that does not feel interested at least in that species of literature, to the wonderful diffusion and freshness of which the labours of the compositor and the printer night and day contribute, till they are but too often untimely and prematurely exhausted in the service of the public, and no longer fit for anything but for the asylum now prepared for them. We trust, then, that the public at large of this metropolis will extensively assist at the inauguration of the Printers' Almshouses, and contribute handsomely to the funds of the Institution; and that having once found their way to Wood-green, they will periodically remember its benevolent purposes, and assist in enabling the printers of London to extend its accommodations and its usefulness as an asylum for life to the poorer and more unfortunate brethren of the craft.

The object of the Institution being known, and its excellence admitted, our readers will not be surprised to hear that H.R.H. Prince Albert and the Duke of Cambridge have enrolled themselves amongst its patrons.

ARCHITECTURAL PUBLICATION SOCIETY.

THE annual meeting of this society was held at the rooms of the Royal Institute of British Architects, May 15th, Mr. James Bell, M.P. in the chair. The report of the committee was read: from it we learn that,—

"In the 'Dictionary of Architecture,' the letter B has been completed in the parts II. and III. and the quantity of letter-press thus issued for the year 1853-54, may be estimated at about equal to 680 pages of an octavo volume: it is illustrated by 115 woodcuts. A calculation has been made that these two parts of the text contain a quantity of type nearly equal to that in five volumes of the usual octavo novel. The year's production, as far as quantity alone is concerned, must therefore be considered as satisfactory; while from the great care and attention devoted to the work in all its stages, it is expected that very few, if any, cases of incorrectness have been found: should any be discovered, it is requested that they may be communicated to the secretary.

In the last report it was stated, in regard to the account for 1854-55, that in consequence of the shortness of the period during which it would be kept open, the income would be undoubtedly less than that of previous years, unless greater punctuality was evinced by the members themselves in paying their subscriptions. This has proved to be correct, the receipts showing an income of only 331*l.* 4s. 7d. whilst the expenditure has been 332*l.* 0s. 9d. leaving a debt of 16s. 2d. This income, however, has enabled the committee to issue twenty-four plates to illustrate the articles contained in the letters A and B of the 'Dictionary.' These parts have been considered by many members to be superior to any previously issued, and to constitute a sufficient return for the year's subscription. However, had the payments been larger, or even earlier, no hesitation would have been felt by the committee at ordering a third part."

"During the past season, the committee has been engaged in the consideration of various propositions for alterations in the conduct of the 'Dictionary:' these propositions, however, were found on discussion to involve too great an alteration in the present appearance as well as plan of the undertaking.

For the year 1855-56 just concluded, the letter C is in course of progress. The three first letters in all dictionaries contain the largest proportion of articles,

and the present one is not exempt from the rule. According to the published 'List of Terms,' A, B, and C comprise one-third of those in the whole alphabet. It is clear that the labour is well advanced, and it behoves the supporters of the society to assist in obtaining that accession of members which is requisite to complete the work for the amount estimated. The committee, as trustees of the funds of the society, can only expend the ascertained income: a larger quantity of matter, therefore, is only to be obtained by the desired increase in the funds."

"Although the desirability of adding to the number of supporters has been so frequently alluded to, the committee feel themselves called upon again to press this point upon the attention of the meeting. The present supporters consist chiefly of members of the profession: the *personal application* is only required of every member to his friends, whether amateurs, engineers, or builders, for each to secure at least two or three additional subscribers. The committee have great pleasure in quoting, as a proof of the utility of such applications, their resolution passed at a meeting held April 24th, namely, 'That the best thanks of the committee be given to Mr. Lockyer for his valuable exertions in increasing the list of subscribers.'"

The amount received for the year ending April, 1856, is 304*l.* 10s.

The report having been adopted, special votes of thanks were passed to the committee, treasurer, honorary secretary, and local honorary secretaries; also to Messrs. Benjamin Ferrey and T. Hayter Lewis, for their kind services as auditors; also to the Council of the Institute, for their kindness in allowing the use of the rooms.

Messrs. J. H. Good, jun. and Octavius Hansard were appointed auditors of the accounts for the year ending 30th April, 1856; and the cordial thanks of the meeting having been given to Mr. James Bell, for his conduct in the chair, the meeting adjourned.

APPROACHES TO HYDE-PARK FROM BROMPTON.

AUTHORITIES in office have of late deserved well of the public, by conceding to general conveniences free routes. Those through St. James's-park (when open), will mark an era in liberality, which may be termed the *Hall* mark. A new pathway has also been opened, across the north-west bridge into Regent's-park, besides numerous improvements in laying out grounds and cutting walks. There are, however, other openings and easements yet required, and the attainment of these depends on the inhabitants of the districts immediately concerned.

Brompton is one of the excluded quarters: from Albert-gate to the new roads (Messrs. Jackson and Freke's), beyond the new National Gallery, fully three-quarters of a mile, there is no traverse road. Along the park margin, from the towering Oil Cloth Factory to Mr. Freke's road, at the old Nursery-gate, a new Belgravia has been constructed. The houses are large, and the roads are raised in causeways, at right angles with the Park-road, giving factitious elevation to ranges which present enormous bastions to the dwindled domiciles of Brompton-square, and the various squares and crescents thereabout. All access to the park is barred out, although Brompton-square, which till lately was open to the aroma of the Serpentine, and other verdant influences of the Hyde, is but three hundred paces from the park railing.

The modern mimic St. Germains is wholly secluded. Princes-gate, Ennismore-place, and other accumulations, in lofty brick, the habitations of the upper ten thousand, are all *cul de sacs!* You must go out at the same gate whereat you entered, and with just the same dignity. This may be a good arrangement, but if Mr. Jackson and Mr. Freke, both very extensive builders, are right in their modes of laying out noble roads—roads 100 feet wide, and which lead from the park to various parts of the suburbs,—how can the *turn-again* plan of Princes-gate (as the whole quarter is called) be also right?

Several meetings have been held by the aggrieved householders of Brompton-square and the vicinage, to obtain a right of way by Ennismore-place to the park. A very small opening of about 10 feet still remains for a footway; but the lucky planner of Princes-gate got hold of the opening at the end of the square, built another bastion, towering 70 feet above the square—something of a "fanal," with a front to the park, a sort of temple of Janus, with as ugly a front as could be contrived to Brompton-square; in which also he has erected coach-house and stables, not leaving a foot for garden—no, not for half a yard of cabbage.

Must the Bromptonians suffer the Princes-gateians to make their square a stable lane! Will they allow their curb-stone and pavement to be cut away? (there is an iron post, too, just in the centre of the stable entrance): must they allow Mr. Elger to depreciate their dwellings 30 per cent. whilst he enhances his own perhaps by 5 per cent. only?

There is an authority of modern creation. Let those concerned convene a full meeting—let the Thurlorians, Oratorians, and the Montpellierians, unite in one common assault against the invader—let them first shut that stable-door, and then apply, on the plea of public health and utility, for a foot thoroughfare to the park, and they shall be aided by all the householders from No. 1 to No. 50,

BROMPTON-SQUARE.

PRINCIPAL WORKS CHOSEN TO THIS TIME BY PRIZEHOLDERS IN THE ART-UNION OF LONDON.

From the Royal Academy. — Landscape, with Sheep, G. Cole, 50*l.*; Welsh Fireside, D. W. Deane, 50*l.*; First Buttons, D. H. Friston, 30*l.*; Ferry-boat on Loch Leven, W. Luker, 20*l.* 5*s.*; Forest Stream, E. Gill, 30*l.*; Surrey Cottage Scenery, J. J. Wilson, 20*l.*; The First Scrape, R. Farrier, 20*l.*; A Favourite Retreat (North Wales), F. W. Hulme, 20*l.*; Dunkirk, A. Herbert, 30*l.*

From the Royal Scottish Academy.—Holy Island (Lamlach), W. H. Paton, 50*l.*

From the British Institution.—An Old Bridge near Pella, G. E. Hering, 200*l.*; Scene from the "Gentle Shepherd," W. Underhill, 60*l.*; Ruse de Guerre, J. M. Joy, 35*l.*; Wayside Inn, R. Brandard, 25*l.*; A River Bit, J. Dearle, 25*l.*; A Farm Pond, J. Stark, 20*l.*; A Roman Peasant Girl, T. Gooderson, 20*l.*; Dean Swift and the Messenger, T. P. Hall, 40*l.*

From the Society of British Artists.—Medmenham Abbey, H. J. Boddington, 60*l.*; The Youthful Gamester, J. Clater, 60*l.*; A Summer Morning, H. J. Boddington, 60*l.*; On the Conway, J. C. Ward, 50*l.*; An English Lane, H. J. Boddington, 40*l.*; The Pilgrimage Church of Bethanan, A. F. Rolfe, 35*l.*; Scene near Mysyduth, J. Tennant, 50*l.*; On the Look-out, J. Henzell, 25*l.*; A Welsh Ford, G. Shalders, 25*l.*; Goldfinch and other Birds, Mrs. Withers, 20*l.*; Highland Courtship, Miss Macleod, 25*l.*; A Fresh Breeze, J. Meadows, 20*l.*; Water-mill (Dolgelly), A. Barland, 20*l.*

From the National Institution.—The Mid-day Meal, H. B. Willis, 100*l.*; Early Morning, H. B. Willis, 60*l.*; Dutch Vessels entering Port, T. S. Robins, 50*l.*; Wild Flowers, Mrs. Withers, 50*l.*; The Woodman's Repast, H. P. Parker, 40*l.*; Surrey Scenery, W. Lukeing, 25*l.*; Rouen, A. Montague, 20*l.*; The Last Gleam in the West, H. B. Grey, 20*l.*

From the New Water-Colour Society.—The Vegetable-market (Venice), J. H. D'Egville, 26*l.* 5*s.*; Turf-boats approaching a Lock, M. A. Hayes, 21*l.*

THE METROPOLITAN BUILDING ACT.

Building for temporary Purposes.—Pray inform your readers that such buildings are not permissible unless constructed in every particular according to the Act. Under the shelter of this plea all sorts of irregularities are constantly committed:—the Act, it cannot be too widely known, does not recognise such erections, as they are often made permanent.

Cellar Arches and Vaults.—The Act makes notice to the district surveyor when vaults are to be built imperative, and regulates their construction: it also imposes a penalty of 20*l.* for every default. How is it, therefore, let me ask, that a builder of repute, employed on a large Government work too, has put in the whole of the arches for the Farringdon-street extension in default of the proper notice? The cumulative penalties would amount to a considerable sum.

District Surveyors' Fees.—Your remark that work done in default of proper notices is greatly on the increase by small jobbing builders, is very correct: this is so to a great extent: they will take work which respectable builders will not, undertaking to chance the fee and the work being found out. Some timely inflictions of the 20*l.* penalty, or in lieu thereof the incarceration of the defaulters, will be found useful. Since the abolition of the treble fees, a very salutary check, a great increase of work without proper notice is observable.

CRITO.

METROPOLITAN BOARD OF WORKS.

AT a meeting on the 16th inst. on the bringing up a report upon the "Duties of the Board under the Building Act," recommending that an officer be appointed for the purpose of verifying the plans and statements accompanying applications to the Board under the Building Act, and to assist the superintending architect in his duties, and that that officer be paid an annual salary of 150*l.*—

Mr. Leslie thought the Board were taking upon themselves duties which did not belong to them; and that under the 76th section of the Local Management Act, the province in such cases was with the district boards or vestries.

Mr. Turner moved an amendment to the effect, "That an additional clerk be appointed in the department of the superintendent architect;" and this was carried.

A stormy discussion ensued upon two paragraphs in the report, viz.—"That the application of Messrs. Turner and Sharpin, for permission to bring out the fronts of two houses, Nos. 63 and 64, Pratt-street, Camden Town, as shown by the drawings accompanying such application, be not granted."

This recommendation was denounced by Mr. Wilkinson and Mr. Corrie, the representatives of St. Pancras, as an act of injustice; and some strong comments were made upon the conduct of those who had erected a public-house and other buildings on the St. Martin's Cemetery, in Pratt-street.

The paragraph of the report was ultimately confirmed.

The second paragraph was that the application of Mr. J. Tarring, for permission to extend the porch of Sussex Villa, Sheffield-terrace, Camden-hill, Kensington, as shown upon the plan accompanying his application, be granted.

This proposal, after some opposition on the part of Mr. Hawkes, was also carried.

STATE AID IN FORMING LOCAL MUSEUMS OF ART.

A CHANGE has been made recently in the mode of examining the works of the Schools of Art, which is of a self-acting character, and calculated to assist materially in forming local Museums of Art. It has been determined that once in each year an inspector from the department, shall visit each school, hold an examination in certain of the early stages of the course: and, in conjunction with the head master, assisted, if necessary, by a master from one of the nearest schools, adjudge local medals and rewards. The principal and advanced works so rewarded will form a General or National Collective Exhibition, and be inspected by the art superintendent, who, in concert with examiners appointed by the board, will adjudge national medals to the best, in mutual competition. The collection will afterwards be sent round to some of the larger provincial towns. The works which have obtained first medals in the local competitions, being all collectively exhibited, will be examined by the art superintendent, aided by other appointed examiners, and medals awarded to the works successful in this second competition. For every medal awarded in the National Competition, the school in which the successful student was under instruction, will be privileged to select, from a list, works of art value 10*l.* The result to every school will, therefore, be proportioned to the advance of the students, and it will be by such means that the nucleus of a local museum may be established. Thus each local school will share in the State assistance, according to merits. The central authority, instead of giving the assistance as formerly, will be merely the executive of the self-acting demands of each local school.

GAS.

Weedon.—A numerous meeting was held at Weedon, on Tuesday before last, for the purpose of establishing a company for lighting this place with gas. Mr. Sharp, gas engineer, attended with estimate, &c. The capital proposed was 4,000*l.* divided into shares of 10*l.* each, nearly the whole of which were subscribed for at the meeting. A provisional committee was appointed, and it was agreed at once to proceed with the erection of the works, on a site provided by the Government. The great obstacle, hitherto, has been the difficulty in procuring the sanction of Government to light the barracks. The whole of the Government establishments are now to be lighted.

Alleged New Method of Generating Illuminative Gas.—The Boston newspapers state that an inhabitant of that city has got an apparatus for generating gas, simply from zinc and hydro-chloric acid, and without external heat. This apparatus, it is declared, yields a gas of great purity and brilliancy; as contrasted with coal gas, the same quantity yielding twice the illuminating power. The whole apparatus, it is added, is contained in a cylinder 3 feet in height and 16 inches in diameter; and a machine capable of generating sufficient gas for eight lights requires looking to and feeding only once a month, or less. That zinc and spirit of salt will yield a brilliantly illuminative gas is more than doubtful. The gas so generated is merely hydrogen, which (usually at least) yields very little light. Some time since, however, it was alleged that, by a catalytic process, it was made highly illuminative; and it remains to be seen, perhaps, whether the gas of which Boston is boasting be something of this sort, or a mere "flash in the pan."

Hansor's Oil Gas.—Mr. J. Hansor, of Vauxhall, is said to have succeeded in obviating the old difficulties in the way of preparation of gas from oleaginous substances. His process is described as consisting in the vaporization of the material in small retorts at a heat just sufficient for that purpose, and then of converting into gas, at a somewhat higher temperature, the vapour, which flows in hot volumes from the small retorts into and through a large one. The flues are

so proportioned that the proper heat of each retort is raised and equally sustained at same time. Each retort has its own flue, and each flue is regulated by a separate damper, so that the temperature of each retort may be rendered higher or lower at pleasure. By means of test-pipes and stop-cocks, the operator knows exactly when vapour is generated in the small retorts, and gas in the large one; and thus, by attention to two or three simple directions, can conduct the process with satisfactory and uniform results.

Gas-Combustion and Gas-Meting — Mr. L. Thompson, M.R.C.S. last week delivered a lecture to the Gas Fitters' Mutual Association on "Combustion" as connected with gas, illustrating his positions with practical experiments. Under certain circumstances, there was a peculiar smell with gas, particularly Cannel gas: this odour, the lecturer remarked, arose, not from the escape of gas, as generally believed, but from a peculiar compound, generated in its re-solution into water and carbonic acid, and to obviate which the ventilation should be proportioned to the amount of gas consumed. The lecturer concluded by introducing to the meeting an invention connected with the consumption of gas, leaving the inventor, Mr. Sanders, to describe it. This invention consists of an oblong trough, adapted to the size of the meter, in which is placed a semi-circular figure, immersed in water, and which revolves on its axis, and *maintains the water-level*, upon the accuracy of which depends the correctness of the gas register. The only drawback to its universal introduction among gas consumers was considered to be the liability of the water to freeze in winter, and thus prevent its efficient action, an objection, properly speaking, attributable to the wet meter itself rather than to the new invention, which, on the other hand, is said to obviate the usual objections to the wet meter.

CANDIDATES FOR DISTRICT SURVEYORSHIPS.

At the last meeting of the Council of the Royal Institute of Architects, certificates of competency, after due examination, were sealed for the following gentlemen:—Mr. Charles James Badger, Mr. Henry Astley Darbishire, Mr. William Richard Gritten, Mr. Sidney Godwin, Mr. Henry Hart, Mr. Walter Robert Kinipple, Mr. Henry Parsons, and Mr. Henry Stephen Ridley.

COMPENSATION CASE.

Lord St. Germains against the Mid-Kent Railway Company.—On Wednesday, the 21st inst. an inquiry was held at the Black Horse, Lewisham, before the assessor for the sheriff of Kent, to assess the value of five and a quarter acres of land, abutting on the road from Lewisham to Forest-hill. Mr. Alexander and Mr. Liddel appeared for the claimant, and Mr. Bovill and Mr. Holloway for the company. The plaintiff claimed 3,300*l.* and in support called Mr. William Tress, who valued the property at 2,709*l.* 7s.; Mr. Chinnock, 2,560*l.*; and Mr. Charles Smith, 3,180*l.* The surveyors on behalf of the company were Mr. Ritchie, Mr. C. Lee, Mr. E. Roberts, Mr. Withall, and Mr. Owen, but they were not called. The jury, after an hour's consideration, returned a verdict of 1,100*l.*

OXFORD ARCHITECTURAL SOCIETY.

On Wednesday in last week the fourth of the series of lectures on Foreign Architecture was read by Mr. James Parker. He said that Brittany had advisedly been chosen as a subject for a separate paper, inasmuch as it seems to have stood alone, isolated from the rest of France, in its manners, customs, history, and, to some extent, in geographical position. He showed that it had always been, as it is now, behind hand in the cultivation of the arts and sciences. That during the whole of the flourishing epoch of Architectural History in other countries, Brittany had no architecture which it could call its own, and that it was dependent both on England and France for its styles and architects. It was not till the sixteenth century, when, on the marriage of Anne of Brittany, it was united to France, that the country seems to have awoke from its sleep. Then, when, in every village, they commenced building churches, it struck out a style different to that in any other country of Europe. He described Brittany, always looking to the past, as battling with the Renaissance period; and showed that when the Classical style did penetrate, a mediæval character was given to them. In the course of the lecture, Mr. Parker dwelt some time on the "Ossiaires" and "Calvaires," which are the characteristic features of the Breton churchyards, and he illustrated his subject by mentioning many of the interesting customs of the Bretons, showing their reverence towards their dead, and their respect for their cemeteries.

Miscellanea.

The Torquay Branch of the Metropolitan Association for Improving the Dwellings of the Industrious Classes, have recently opened their first building, consisting of a dwelling-house for fifty single men; it is situated in Queen-street, and is in the Italian style, built of the local limestone, with brick and ashlar-tooled limestone dressings, and covered with a deeply-projecting roof of Italian tiles, surmounted by a lantern. The house consists of one general sitting-room, kitchen, and offices; each man has a dormitory and safe for food to himself, and the utensils for cooking, &c. are all provided. The establishment is regulated by similar laws to the London one. The charge made is 2s. per week, including cooking, washing, &c. The building is fitted up with Jennings's patent lavatories, gas and steaming apparatus, and is ventilated by a series of flues in the floors and walls. Accommodation is provided for a married man as superintendent. Mr. Edward Appleton, of Torquay, is the architect, and the works have been carried out by Mr. George Stevens, builder, of Newton Abbott.

The Works in progress at Windsor Castle.—Of late there has been active progress made with the various improvements now in progress at Windsor. The East Terrace of the Castle is being paved with Seyssel asphalte of Pyrimont, prepared by Claridge's Asphalte Company. At one end of the Terrace is a steam engine, which drives three large caldrons, containing each about one and a half ton of materials. The principal ingredient put in is a bituminous limestone, in powder, to which is added mineral tar and grit of uniform size. The caldrons being over strong fires, the contents are kept unceasingly agitated by machinery, which, in three hours, amalgamates the ingredients, in a semi-fluid state. In this condition the asphalte is run into iron trucks, on a portable railway, and rapidly despatched to the workmen on the Terrace. The thickness of the pavement is determined by strips of wood, against which the material is poured, and before it becomes set the workmen bring the surface uniform, so as to make it appear almost without a joint. The channels for water are formed in the same material, which, being impervious to water, is well suited to carry off the drainage. This asphalte has also been used upon the roofs and other portions of the Castle, and some years back the Royal Kennels were paved with it.

New Military Hospital on the Solent.—On Monday last the Queen laid the first stone of a large military hospital, about six miles from Southampton. It will include accommodation for 1,000 patients, and will cost, it is thought, about 200,000*l.* We shall give views and particulars in another number, and make it the occasion to offer some remarks on the subject. Mr. Mennie, the surveyor of the Royal Engineers' Department, in Pall-mall, is the architect.

A Cheap Self-Registering Minimum Thermometer.—The self-registering minimum thermometer, made by Messrs. Negretti and Zambra, for horticultural purposes, will supply a want. It consists of a glass tube mounted on a strong zinc scale, the bulb and part of the bore of which is filled with perfectly pure spirits of wine, in which floats freely a black glass index. A slight elevation of the thermometer, bulb uppermost, will cause the glass index to pass to the surface of the liquid, where it will remain, unless violently shaken. On a *decrease* of temperature the alcohol recedes, taking with it the glass index: on an *increase* of temperature, the alcohol alone ascends in the tube, leaving the end of the index *farthest* from the bulb indicating the lowest temperature that has taken place during the absence of the observer.

Exhibition at the Royston Institute.—At the new building lately erected for the Royston Institute, an exhibition of objects illustrative of science and art, and comprising 900 specimens, was opened on Monday in last week. Royston is a town of not more than 2,000 persons, men, women, and children. The Institute, nevertheless, has 240 paying members, or about one in every eight of the whole population, as remarked by the *Hertford Mercury*, which gives a full account of the Exhibition, and a report of a lecture by Mr. R. Hunt, F.R.S. on its various objects. Of the building itself in which the exhibition is being held, the same paper remarks that "there is no town in the county of Hertford, and probably no town in the kingdom, with a population five times that of Royston, which possesses such a building devoted exclusively to literary, scientific, and educational purposes, and with a museum, library, reading-rooms, class-rooms, and a spacious lecture-hall."

Fall of a Bridge near Montreal.—The new suspension bridge over the Falls of Montmorency gave way on 30th ult. and the whole structure was carried over the falls. A man and a woman were on the bridge, with a horse and cart, at the time, and were carried over the falls and lost their lives.

Forgery of Bank-Notes.—Mr. H. Bradbury delivered an interestting lecture lately at the Royal Institution, Albemarle-street, upon the "Manufacture of Bank-Notes, in connection with the subject of Forgery." The audience was numerous and distinguished; the Duke of Northumberland presiding. The lecturer said it was his object principally to direct attention to the engraving, as the most important feature in the manufacture of bank-notes, because upon that depended their security in the eyes of the public. The main feature of the note, the engraving and its security, depended upon the vignette: the higher the quality of the artistic impress, therefore, which this vignette carries, the greater the security of the note. The vignette derived its great value from being the uncounterfeitable seal of the note,—uncounterfeitable, because its individuality could not be imitated. However similar, there was a difference in the human countenance: however similar, there was a difference in handwriting; and if any number of the most eminent engravers were to endeavour to copy each other, it would be detected by a casual examination. The Bank of England note, the lecturer continued, had always been characterised by simplicity, but carried to an extreme in the opposite direction. In its present form it was unworthy of the bank and nation. In the case of the Anastatic and the photographic processes, the antidote consisted in the adoption of printing in different colours. If the water-mark of the bank-note were backed by excellence of art and engraving, it might be regarded as unforgeable; but if this should be found not to be the case, then it should be imperative on the Government in committee to resolve this question, or offer a reward for its solution.

Hackney.—Schools, to accommodate sixty girls and sixty boys, with offices attached, have just been completed for the committee of the New Gravel Pit Chapel, Hackney, at an outlay of about 420*l.* Mr. R. W. Wright was the architect; and the works have been carried out in a satisfactory manner by Mr. W. Harwood, of Hackney, builder.

An Opportunity for a Society.—It may be useful to say, that Societies requiring a large room of meeting have an opportunity at this moment of securing one in association with the Royal Institute of British Architects, who are looking out for some literary or scientific society to join with them in taking very eligible premises, now vacant near the best part of Piccadilly.

Rudhall, the Bell-founder.—"In the year 1684, one Abraham Rudhall, of the city of Gloucester, brought the art of bell-founding to great perfection. His descendants, in succession, have continued the business of casting bells; and, by a list published by them, it appears, that at Lady-day, 1774, the family, in peals and odd bells, had cast to the amount of 3,594. The peals of St. Dunstan's-in-the-East, St. Bride's, London, and St. Martin's-in-the-Fields, Westminster, are in the number." The above extract may perhaps form another note to the many observations in your journal on bells and bell-ringing. —W. P.

Railway Returns.—The official statements of railways in the United Kingdom for the second half-year of 1855, show that the total capital sunk in railways was 287,271,405*l.* the amount of interest and dividend in respect of it for the half-year being 5,934,589*l.* or at the average rate of 4*l.* 2s. 7¾d. per cent. per annum. Last year the rate of interest and dividend was 3*l.* 19s. 9¼d. per cent. per annum. The increase in capital during 1855, was 10,489,421*l.* The total traffic receipts for the half-year amounted to 10,915,770*l.* the working expenses to 5,188,473*l.* or 47·53 per cent leaving a profit on the working of 5,727,297*l.* or 52·47 per cent. of the receipts. The capital of twenty railways upon which no dividend was paid on the ordinary shares amounted to 25,707,077*l.* of which 12,922,947*l.* consisted of mortgage and preference capital, and 12,784,130*l.* of ordinary capital.

The Dwellings of the Industrious Classes.—An association has been organised in Liverpool, under limited liability, for the improvement of the dwellings of the industrious classes. It is called "The Liverpool Labourers' Dwellings Company," to which has been given the first certificate ever registered under this Act. A plot of land had been purchased in Northumberland-street, Toxteth-park.

Coloured Glass Window-Frames. — Another novelty in the glass window-frame invention has been produced by Messrs. Lloyd and Summerfield, of Birmingham. They have just completed a frame about 10 feet high, of transparent *coloured* glass, for a drapery establishment, at Northampton. The shafts are blue, and the caps and bases ruby, ornamental rings of amethyst being added. Each compartment, instead of being square, as in the specimens previously noticed, is surmounted by a depressed arch. The door plates will be enclosed in a frame-work of pale green glass.

THE NEW MUSIC HALL, BIRMINGHAM.—The New Music Hall, in Birmingham, of which we spoke some time ago, is nearly finished. The style is Gothic. The material used is ordinary brick-work with stone dressings. The hall itself is in the clear of the walls 111 feet 6 inches in length by 76 feet in width: on each side are saloons or refreshment-rooms of ample size. There are two tiers of galleries surrounding three sides of the building, with an orchestra at the east end, which leaves the clear space on the floor 76 feet by 50. The arrangements will afford sitting accommodation for 1,840 persons, thus disposed of;—720 on the floor, 420 in the lower gallery, 580 in the upper gallery, and 120 in private stalls to be arranged on either side the orchestra. The stalls or lower galleries are over the saloons, and project into the hall four feet on either side, with arched brackets under the projecting parts of the joists and in the saloons. The upper gallery is supported by iron columns, running up to receive the principals of the roof, which span the entire width of the building. The ceiling in its highest part is 70 feet from the floor: it presents the appearance of an open-timbered fourteenth-century roof, constructed entirely of yellow pine, stained and varnished. Projecting from the sides of each principal of the roof are traceried brackets, intended to support twenty polished brass coronæ: these brackets are to be banded to the arched parts of the principals with wrought-iron ties, filled in with brass illuminated foliated work. Considerable progress has already been made in the decoration. It consists of the primitive colours—red, blue, and gold as a basis: the compartments of the ceiling are painted ultra-marine blue—a light pattern on a dark ground, with red flowers interspersed. The timbers (consisting of the principals, arches, tracery, rafters, &c.) are relieved in colour with diapery patterns on the lower side: the octangular iron columns have their capitals picked out in blue, red, and gold, with the shafts diapered in two browns, lined with gold lines. The gallery fronts are composed of iron-work, and are finished in a sober colour, with leaves and bands in gold. The wall spaces behind the stalls and other parts of the hall are to be ornamented with a foliated decoration in various colours. The builder is Mr. Briggs, and the architect Mr. James Cranston, of Bennett's Hill. The entire cost of the hall, with its furnishings, is estimated at 10,000*l.* raised in 10*l.* shares.

DESIGNS FOR CAVALRY BARRACKS.—With reference to our notice of designs for cavalry barracks, we are asked to add that the authors of the fifth design chosen, and marked Balaclava, are Messrs. Ellis and Read.

STAINED-GLASS WINDOWS. — Some stained-glass windows have been recently fixed in Whitnash Church, Warwickshire, by Mr. Holland, of St. John's, Warwick. The east chancel window contains three subjects, namely, the Baptism, Last Supper, and Ascension, with canopies and daisy border, emblematical of St. Margaret, to whom the church is dedicated. The tracery is filled with angels, in an attitude of prayer, bearing the emblem of the Trinity, &c. A side window contains the following subjects in panels:—Christ blessing little children; Timothy being taught the Scriptures; Lamb and banner, and Dove descending. Mr. Holland has also fixed a stained-glass memorial window in Southam Church, Warwickshire, containing the following subjects:—The Ascension and Acts of Mercy; Christ healing the Sick; Almsgiving, or relieving the Pilgrim, illustrating the text—"I was hungry, and ye gave me meat; I was thirsty, and ye gave me drink; I was a stranger, and ye took me in."

CHELTENHAM SCHOOL OF ART.—The name of the master of this school is Mr. James P. Knight; not Wright, as stated in our last.

FOOD, CHEAP AND GOOD.—Dr. M'Cormack, Consulting Physician to the Belfast Hospital, &c. and an old correspondent of the *Builder*, has circulated some useful remarks on this subject in a printed form. He recommends the formation of bread from dough made with water impregnated with carbonic acid got from chalk instead of formed in the dough at the cost of the flour. This flour, he recommends, should be composed of the whole of the grain, merely stripped of husks or extraneous envelopes, and containing all its bran as well as all its flour, with no bolting or screening after grinding. On a large scale, as for workhouses, or for Government purposes, the dough should be placed in a machine, the counterpart of the common brick and tile machines, for delivery of the loaves as fast as they can be placed in permanently heated ovens, and there so arranged as to become crusted all over like the French loaf. This he regards on the whole as the best and cheapest mode of baking yet devised. In small families he advises the use of a rotating sheet iron oven before the fire for the baking of this kind of bread. Some useful instruction as to the preparation of cheap and good stews for the poorer classes is also given.

TESTIMONIAL TO DR. HASSALL.—A testimonial has been presented, at a dinner, to Dr. Hassall, whose services to the community, as the detector of adulterations in almost every article of nutriment, whether solid or liquid, are already well known and acknowledged. The testimonial was designed from Milton's "Paradise Lost," by the Rev. G. M. Braune, M.A. It represents the Angel Ithuriel, clad in armour, touching, with his spear, Satan, who, having assumed the shape of a toad, sat close to the ear of Eve, tempting her. The testimonial stands about 3 feet 6 inches in height. The figure was modelled by M. Frerèt. It might be read as the Genius of Good destroying Evil, in the shape of a toad, with the point of Truth.

WARMING APPARATUS IN FARNBOROUGH CHURCH, KENT.—A constant circulation of the air of a building through the air-drain, and its concentration on the stove, appear to be the principle of this apparatus. The warm air ascends, expands into every part, and gradually descends, as it cools by contact with the walls and windows, flowing down the air-drain, to be again warmed, and thrown up into the church. It is not necessary to conduct it to the extremities of a building, because the coldest air is always flowing down the drain; and the warm air necessarily taking its place, the warmth is diffused with very little variation of temperature. The construction of the stove is simple and inexpensive: it consists of an iron cylinder, cast in two pieces, 5 feet long by 2 feet 6 inches in diameter: the fire-bars are placed a little below its centre, and are lined with Welsh lump fire-bricks. The stove is fixed in an excavation under the aisle of the church. It has three gratings; the first serving the double purpose of a trap-door to the stoke-hole, and an air-draught to the fire: the second is placed over the stove, and admits the warm-air into the church; and the third, at a distance of 24 feet, is put over the air-drain, which is conducted down to the under part of the stove in the direction of the arrows in the section. The draft is regulated by a small screw-valve in the lower furnace-door, and no damper is used in the chimney. The fire is lighted on the Saturday, and keeps in during the night without an attendant, and it is never touched during the services. In the construction of the air-drain care should be taken that it has no sharp angles: it should be large—2 feet 6 inches by 2 feet 6 inches at the least. Sufficient air only for combustion is admitted by the screw-valve, and so very little heat escapes into the chimney, and the stove is never hot enough to burn the air. The apparatus was put into the church when it was restored last autumn, and has been found, we are told, to answer remarkably well.

FIRE-PROOF MATERIAL FOR FURNACES.—Mr. David Hill, of Tipton, Staffordshire, forge-manager, has patented an invention for "preparing a material capable of resisting fire, and especially suitable for the interior of puddling and other furnaces." In this preparation, the inventor employs materials that have been subjected to the greatest heat that furnaces excite. The combination consists of limestone and ironstone, or the cinder from furnaces, which are melted together and cast into moulds. The proportions of materials may be varied, but the following are preferred;—one-sixth part of limestone, and two-third parts of ironstone or cinder. These are mixed together and fused. Mr. Hill's experience as a forge-manager has no doubt taught him that the vitrified slag of the furnace is well adapted to resist the heat by which it has been melted, and in this respect it accords with the observations of Mr. Truran, that the vitreous covering of the bricks protects them from the farther action of fire. The specification of the invention is one of the shortest on record: the descriptive part and the claims only occupy twelve lines.

NEWS FROM NEW ZEALAND. — The Hutt-bridge at Wellington, New Zealand, a connecting link between Wellington and the river Hutt, has been opened for traffic. The following details are from the *Australian and New Zealand Gazette*:—The length of the bridge is 210 feet, the width of roadway 14 feet. The bridge is supported on four principal piers and two light embankment piers. The main piers are constructed of two parallel rows of piles (five in each row), driven on an average 14 feet below the bed of the river. Above the water-line these piles are firmly connected together by double waling pieces, planking, bolts, &c. so that one pile cannot be broken without breaking five others. The span between the main piers is 50 feet; the length of the main piers, 20 feet; width of main piers, 3 feet. The roadway is carried over the piers on girders 56 feet long, 18 inches by 15 inches, in one solid piece of totara, strengthened by two brackets, 15 inches by 10, resting on and secured to the caps of the main piers: to prevent any deflection, a king and queen post truss framing is constructed over each garden, which relieves the centre of the span and discharges the weight on the heads of the piers. The design as a whole appears heavy, but that it will withstand the heaviest flood there can be little doubt. The design is by Mr. Burt, who superintended the erection. The amount of the contract was 1,450*l.* The contractor was Mr. Carter. A dinner was given by the contractor at the opening to about forty of the workmen employed by him in town and on the works at the Hutt.——The same authority gives some details as to the Sydney College, New South Wales. The pile of building which will form the college was progressing satisfactorily. It is intended that the style and arrangements of the entire building should resemble Oxford, and it is expected that the college will be completed and occupied before the termination of 1856. This work had up to last advices cost 20,000*l.*; and the estimate for the entire construction was 140,000*l.*; but the diminution which has taken place since that calculation in the price of labour of all kinds supports the opinion that the whole expenditure will not exceed 120,000*l.*

PHOTOGRAPHY UNDER WATER.—Mr. W. Thompson, of Weymouth, gives an account, in the *Journal of the Society of Arts*, of means he adopted for taking a photograph of the bottom of the sea, in Weymouth Bay, at a depth of three fathoms. Mr. Thompson anticipates that this will be a ready and inexpensive means of arriving at a knowledge of the condition of piers, bridges, piles, structures, and rocks under water.

"CHRISTIAN ARCHITECTURE OF IRELAND."—On the 6th inst. a lecture was delivered to the members of the Highworth Institute and others, by Mr. Edward W. Mantell, of Swindon, architect. The subject was "The Early Christian Architecture of Ireland." In remarks on the early Irish churches, the lecturer noticed their general smallness in size, the larger in form resembling the Roman Basilica, the smaller only a simple oblong quadrangle, without any chancel, their roofs entirely of stone, windows narrowing as they rose in height, small, and splayed, or widening inwards, to afford more light, tops triangular or pointed, square, and semicircular. Glass seems to have been then unknown, or at least not used. Doorways for the most part quadrangular and without cement, occasionally arched at top, and but seldom ornamented. All these structures are of a plain character. Yet Ireland is not without a specimen of a more decorated architecture: there may be seen in the sequestered valley of Glendalough, the City of the Seven Churches, the Balbec of early Christianity in Ireland. They seem to have been founded about the latter end of the sixth or the beginning of the seventh century. It would seem, therefore, that a decorative style existed here, as did also civilization and learning, prior to these being introduced into England.

PROFIT ON COAL CULM, OR WASTE.—A person who not long since worked as a common collier in a mine near Glasgow had lately in his possession a mound of pit sweepings, or *débris*, which could scarcely be dignified with the name of coal-dross, and which covered an area of three acres, and consisted of about 80,000 tons. The extensive miners' strike in Scotland caused so great a scarcity of coal and dross, that the whole of this mound of sweepings was disposed of at prices ranging from 3s. to 13s. a ton, yielding the "proprietor" a clear profit of 26,000*l.* for stuff not usually worth carting away! It has, moreover, it is said, been discovered that, mixed with refuse coke from gas-works, this *débris* is better adapted to furnaces than the best coal-dross, producing a greater heat without half the smoke and waste. The *Glasgow Mail*, moralizing on this remarkable "transaction," is of opinion that "it's an ill wind that blaws nachody guid."

SHAM TENDERS.—For a concert-room, in Knightsbridge, advertised in our columns, eleven tenders were sent in, last week. Seven of these ranged from 797*l.* to 623*l.* (Messrs. Parry); the remaining four from 468*l.* 10s. to 420*l.*! Of these last not one of those who tendered was found to undertake the work: the tender being mere guess work, or worse. Ultimately, Messrs. Parry's tender was accepted. Some means should be adopted to check such conduct.

TENDERS

For the Central London District Schools, to be erected at Hanwell. Messrs. Tress and Chambers, architects:—

Jay	£43,860 0 0
Beck	43,093 0 0
Ashby and Horner	42,850 0 0
Piper and Son	42,437 0 0
Macey	41,670 0 0
Lee and Son	41,440 0 0
Myers	40,800 0 0

ADVERTISEMENTS.

APPRENTICES.—The Committee of the Jonas Philanthropic Society are prepared to advance SMALL PREMIUMS to Masters in respectable Working Trades willing to receive Jewish Boys or Girls as Out-door Apprentices. Apply to M. LAURANCE D. PHILLIPS, Hon Sec. 28, West Strand.

TO DEALERS in SANITARY-TUBES, FIRE-BRICKS, &c.—WANTED, an AGENT in London for the Sale of Glazed Sanitary Pipes, White Floor Quarries, Fire-bricks, &c. A party having a wharf in the neighbourhood of Paddington would be preferred.—Apply by letter, prepaid, to Mr. H. GOODEE, Hardingstone, Northampton.

WANTED, an IN-DOOR SALESMAN, in a wholesale paper-hanging warehouse.—Apply, by letter only, to Messrs. HUDKINSON and BURNSIDE, 50 Upper Thames-street.

TO CLERKS OF WORKS.

WANTED, immediately, by the Braintree Local Board of Health, a Young Man, to act as ASSISTANT to the ENGINEER in Superintending the Sewerage and Water-works. Any one who has been used to similar works will be preferred. Salary, two guineas per week. No one need apply who has not been accustomed to levelling.—Apply by letter, post-paid, to Mr. FENTON, Architect and Civil Engineer, Chelmsford, Essex.

TO CLERKS OF WORKS.

WANTED, immediately, for a Building in the county of Leicester, a competent CLERK of the WORKS; one who is a good draughtsman would be preferred.—Address, stating name, references and salary required, to Mr. JOHN GEO. BLAND, Architect, Uniform Buildings, Horncastle.

WANTED, in the Office of a Builder, a PERSON thoroughly acquainted with the usual routine of a Builder's Office, and who would not object to fill up his spare time at bench, if a joiner,—on the basket if a mason. As a MASON, used to lettering and monumental work.—Apply to W. H. care of Mr. Cousins, *Lincolnshire Times* Office, Lincoln.

WANTED, a few miles from London, upon the Wharf of a Building Material Merchant, a active, intelligent person as CLERK and GENERAL ASSISTANT, where others are kept. He must be a good writer and accurate accountant, and well acquainted with the building trade some branches of which are carried on by the advertiser. None need apply that object to early hours, or whose characters will not bear the strictest investigation.—Address, stating required salary, to Z. Messrs. Lee and Co's, Upper Ground-street, Blackfriars.

TO CARPENTERS.

WANTED, a YOUNG MAN, about 35, who thoroughly understands his trade, for a PERMANENT SITUATION. Reference as to character, &c. required. Address G. J. B. 19, New-road, Near Gower-street North.

TO BUILDERS, CONTRACTORS, AND OTHERS.

WANTED, an ENGAGEMENT as STOREKEEPER, TIMEKEEPER, CLERK, or any situation where the services of an honest, sober, industrious young man are required. Can produce good testimonials. No objection to the country.—Address, S. C. B. "Gibraltar," Gibraltar-walk, Bethnal-green-road.

WANTED, by a Hot and Cold Water Plumber, Oil and Spirit Grainer, Glass and Paper Writer, a SITUATION in town or country. Good wages, with constant work.—Apply by letter to Y. Z. Office of "The Builder."

WANTED, an ENGAGEMENT as BUILDER'S CLERK, by a young man thoroughly conversant with the duties. Is a good plain draughtsman, can estimate, measure up works, &c.—Address A. B. Retreat Cottage, Dorking, Surrey.

WANTED, by a good Plumber, a constant SITUATION in the country. Wages not so much an object as constant employment.—Address A. S. Office of "The Builder."

TO GENTLEMEN, BUILDERS, PAINTERS, AND OTHERS

WANTED, by an experienced Man, a Carpenter—who has filled the situation of carpenter, plumber, painter glazier, paperhanger, and colourer, in the repairs of houses; has had good experience in stairs, shop-fronts, sashes and frames, boxing shutters, &c.; can make out working drawings, and measure up work, a SITUATION, at a moderate salary.—Address, SMITH, 33, Cancell-street, Elizabeth street, Walworth.

WANTED, by a Young Man, aged 30, a SITUATION as CLERK or BOOK-KEEPER. Has filled a similar situation in the office of an eminent London contractor, and is thoroughly acquainted with book-keeping by double and single entry. Unexceptionable references.—Address to A. B. 33, St. Peter-street, Islington.

WANTED, by a Practical Man (who has been engaged on large jobs, both in London and the country), a SITUATION as AGENT or GENERAL FOREMAN, or to take an active part in the management of a Building or Contracting Business. Works executed by commission or measurement, if preferred.—Address S. H. Office of "The Builder."

TO MASONS.

WANTED, an Active, Clever, and Competent Man as a MONUMENTAL MASON, a good LETTER-CUTTER and ORNAMENTAL WRITER. A Permanent Engagement in the country may be secured on application by letter, stating age, name, terms, and wages required, to H. S. Office of "The Builder."

TO PLUMBERS, PAINTERS, and GLAZIERS.

WANTED, a SITUATION, as FOREMAN, by a person possessing a thorough practical knowledge of plumbing and glazing and painting, measuring work, from the plainest text to ill-started-mediæval, grining, and marbling. He is also thoroughly acquainted with account's and book-keeping, and accustomed to measuring and estimating.—Apply, by letter, to A. B. care of Superintendent Hughes, Marylebone Station, Oxford-street.

TO ROAD AND PAVING BOARDS, CONTRACTORS OF PAVING &c.

WANTED, by a Mason, a SITUATION as FOREMAN or CLERK of PAVING WORKS. Has filled the place of foreman for six years, and has superintended contracts for paving for a large firm.—Testimonials as to efficiency can be immediately produced.—Apply, W. B. 6, Essex-street, Gravel lane, Southwark.

WANTED, by a first-rate Draughtsman, Writer, and Colourist, an ENGAGEMENT, to make finished maps and plans of estates, towns, parishes, railways, docks, drainages, &c. Has for eighteen years executed public maps and projects, in every variety, for the profession and the Government.—Apply, by letter, to R. THEODORE, 4, Trafalgar-square, Charing-cross.

TO CONTRACTORS, BUILDERS, &c.

WANTED, a SITUATION in an OFFICE, or otherwise, by a Young Man, aged 28, who has filled a similar situation for upwards of six years in London, where he has had the general superintendence, and is therefore thoroughly conversant with the entire duties, including taking out quantities, &c. Can have the highest testimonials.—Address, R. K. Mr. Wolfe's, 1, St. Peter's-street, Islington.

TO ARCHITECTS.

WANTED, a SITUATION in a LONDON OFFICE, by a superior and expeditious DRAUGHTSMAN and DESIGNER; understands perspective, working drawings and details, and has a perfect knowledge of Gothic.—Address, F. C. 19, Amwell-street, Pentonville.

WANTED, by a respectable Lad, aged 17, a SITUATION in a CARPENTER'S SHOP; has been used to the bench.—Address to W. N. 2, Henry-street, Gray's-inn-road.

WANTED, an experienced and expeditious SURVEYOR, who is a good draughtsman, one who has been accustomed to the use of the level will be preferred. Testimonials will be required.—Apply to MARTIN and SHAW, Mining Engineers, Land Agents and Valuers, 7, Albion-place, Leeds.

TO MONUMENTAL MASONS, &c.

WANTED, by a steady Man, a SITUATION in the country; he is an experienced letter-cutter, writer, &c. both plain and ornamental, and would be willing to make himself generally useful to the interest of his employer. Is a good monumental draughtsman and colourist. Address, M. S. No. 6, Evans-street, Upper Northumberland-street, Pimlico, London.

TO BUILDERS.

WANTED, by a respectable Young Man, a SITUATION as CLERK in a Builder's Office. Has been employed eight years with London Builders. Address R. S. John Barnett's Reading-rooms, Camberwell-gate.

TO ARCHITECTS

A YOUNG MAN who has been for six years engaged in London Offices, having a portion of his time unoccupied, will be happy to UNDERTAKE the preparation of DRAWINGS for the profession.—Address, S. H. Mr. Sloper, 5, Holborn Hill.

AN ARCHITECT and SURVEYOR, of ability and experience, desires an ENGAGEMENT, either in the Office or to superintend works. High testimonials. Salary moderate.—Address, A. E. F. Office of "The Builder."

TO PLUMBERS, GLAZIERS, AND GASFITTERS.

A YOUNG MAN, aged 19, wishes to APPRENTICE himself for a short term of years.—Address, W. F. 44, Alfred-road, Westbourne-green.

TO ARCHITECTS AND ENGINEERS.

AS CLERK of WORKS.—A Respectable Man of experience in superintending very extensive public and private works is desirous of an ENGAGEMENT.—Address, B. B. Office of "The Builder."

TO NOBLEMEN, GENTLEMEN, OR BUILDERS.

A THOROUGHLY Practical Man, of fifteen years' experience in first-class Buildings, solicits an ENGAGEMENT as MANAGER or GENERAL FOREMAN to either of the above. Satisfactory references given.—Address, H R. Office of "The Builder." No objection to the country

A THOROUGHLY Business Man, with a small capital, is desirous of meeting with some one as PARTNER, or otherwise, to assist him in completing and working a Patent. Provisional protection has been obtained. Some one connected with the building trade preferred.—Address, J. A. O. 74, Lower Sloane street, Chelsea.

TO ARCHITECTS AND SURVEYORS

AN ASSISTANT, well acquainted with the general routine of the Office, is desirous of a RE-ENGAGEMENT.—Address, G. M. 246, High-street, Shoreditch.

FREEHOLD ESTATE at HACKNEY, near the Railway Station, where trains and other conveyances start for the City every quarter of an hour. TO BE LET, in plots averaging 150 feet deep, on building leases for ninety years, land tax redeemed. The roads and sewers are wholly completed, and the property situate on a fine gravel soil, in a most eligible position for villas, family residences, and shops.—For terms and particulars apply to Mr. HERING, Architect, 23, Duke-street, Portland-place; or Messrs. GRAY and SON, Estate Agents, Church-street, Hackney.

STRATFORD, ESSEX. — FREEHOLD LAND, within three miles of London, exonerated from land-tax and free of tithe. TO BE LET, on Lease, for a long term of years, in large or small plots, suitable for manufactories or building purposes.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, land tax redeemed. TO BE LET, upon building leases, for ninety-nine years, desirable BUILDING SITES upon the above Estate. The continual demand for houses in this locality, and the picture-que position of the property, adjoining the grounds of the Sydney Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For plans and terms apply to the secretary of the Orphan Working School, 32, Lodgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WEHNERT and ASHDOWN, 43, Charing-cross; or at the Lodge attached to the school.

TO BUILDERS.—FREEHOLD BUILDING LAND TO BE LET on LEASE, for a Term of 999 Years, at Norwood, Hurrow, Stratford, Wanstead, Wimbledon, Chertsey, Ash, near Aldershott Camp, and Wharf-road, City-road. Cash advanced, if required.—Apply to Messrs. BLAKE and SNOW, Solicitors, 23, College-hill, Cannon-street, London.

WOODCOTE ESTATE, CARSHALTON, SURREY.—To BUILDERS and OTHERS.—To be LET for a term of 99 years, adjoining the Carshalton Station, on the London and Epsom Railway, several plots of BUILDING LAND, eligibly and delightfully situated close to the picturesque village of Carshalton. The situation is most desirable, and commands extensive and varied scenery, and is peculiarly applicable for the erection of detached and semi-detached villas. Leases granted direct from the freeholder, and money advanced, if required. The Land is situated on the high road journey from London to bridge. For terms and to see plans, apply at the Offices of the Architects to the Estate, Messrs WEHNERT and ASHDOWN, 43, Charing-cross.

OLD FORD, near VICTORIA-PARK.—Valuable FREEHOLD BUILDING GROUND TO LET, with liberal cash advance, admirably adapted for fourth-rate houses, which are much required in it, is rapidly improving neighbourhood, and which let and sell rapidly.—For further particulars apply to Mr GEO CLARKSON, Surveyor and Land Agent, 45, Penton-street, Pentonville.

HORNSEY-ROAD.—Eligible BUILDING LAND, adjoining the Hanley Arms.—To BE LET on lease for 99 years, direct from the freeholder, about 230 feet of eligible BUILDING LAND, adjoining the Hanley Arms, and fronting Hornsey road. The present 14 houses which will be included to be immediately pulled down No roads nor sewers required to be made.—A plan may be seen, and further particulars known on application to H. W. P. OWEN, Esq. Solicitor, 48, Russell-square; or Messrs. DENT and SON, Surveyors, No. 36, Southampton-buildings, Chancery-lane.

VALUABLE FREEHOLD LAND, Upper Holloway, near the Archway Tavern.—TO BE SOLD or LET on Building Lease for 99 years, direct from the freeholder, a piece of valuable LAND, near the Archway Tavern, Upper Holloway, having a frontage to an intended new street of about 500 feet, averaging in depth 100 feet to 125 feet. The party taking this land may build thereon as many houses as he pleases, a privilege not granted to the owners who have purchased the adjoining land.—A plan may be seen, and further particulars known on application to B. W. POWYS, Esq. Solicitor, 3, Russell square; or to Messrs DENT and SON, Surveyors, 36, Southampton-buildings, Chancery-lane.

TO BUILDERS.—HOUSES are very much WANTED near the Royal Medical College, at Epsom; and this advertisement is inserted hoping that it will attract the attention of some eligible builder, who cannot fail to meet with encouragement in this locality. Some places are overdone with building, but Epsom is under one, and the demand for good houses is immense. The party inserting this advertisement is in urgent want of a good house near the College, at Epsom; and may be referred to, by letter, addressed, E. J. T. Post-Office, Epsom.

TO BE LET, at Southgate, Middlesex, a good BUSINESS PREMISES, situate near the High-street, near the Cherry Tree, with convenient dwelling-house in front, and back shop, cart-shed, and stables in the rear.—Apply to W. C. REED, Architect, 84 Old Broad-street, London.

TO PRINTERS, BUILDERS, STONEMASONS, and OTHERS.—TO BE LET, eligible PREMISES, with spacious yards, workshops, and dwelling-houses, situated in the vicinity of Tottenham-court-road.—Apply to Mr. BEALBY, 3, Princes street, Bedford-row.

EXTENSIVE WHARFS and MANUFACTURING PREMISES TO LET, situate on the Regent's Canal, near King's cross. Rents 50l, 75l, 120l, and 175l per annum, respectively.—Apply to Mr. W. DENNIS, 43, Twyford-street, Caledonian-road, King's cross.

KENSINGTON.—BUILDING LAND TO BE LET, on Campden-hill, near Kensington gardens (gravel, 80 feet above Ordnance datum), 99 years' lease, land-tax redeemed.—Apply to Mr. DAVIS, 4, Upper Phillimore-place, Kensington.

WEYBRIDGE, SURREY, overlooking Oatlands-park.—FREEHOLD LAND TO LET, with option of purchase, suitable for Villa Residences, being within a quarter of an hour's walk of the Railway Station. Season Tickets at reduced rates for this estate. Advance made if required, at the rate of 70l. per cent.—Apply to Mr. A. C. HOOK, 13a, Great George-street, Westminster

WESTBOURNE-PARK, PADDINGTON. VALUABLE GROUND TO BE LET, on Building Lease, for 90 years, at a nominal ground-rent, for third and second rate houses. No fines or premiums to be taken out, and lease direct from the freeholder.—Apply to Mr. JORDAN'S Office, 17, Durham-terrace, Westbourne park, Paddington

FOREST-HILL, SYDENHAM. — FREEHOLD BUILDING LAND TO LET, with option of purchase, for Villas, detached or semi-detached, within ten minutes' walk of the Railway Station. Season Tickets at reduced rates. Advances of 70l. per cent. made if required.—Apply to Mr. A. C. HOOK, Land Agent, 13a, Great George-street, Westminster

TO BUILDERS, SOLICITORS, or CAPITALISTS.—TO BE DISPOSED OF, an AGREEMENT for an extensive PLOT of LAND, laid out for building purposes, ample time remaining for completion. This property, from its position, possesses an unrivalled advantage, commands peculiar facilities and in the hands of an enterprising man or company, with moderate capital for such an undertaking, would secure a large fortune. For further particulars address to A. Z care of Mr. Geo. Startin, Fenchurch-street.

FREEHOLD BUILDING LAND, HOLLOWAY.—TO BE SOLD or LET, about EIGHTEEN ACRES, in large or small Plots.—Apply to Mr. PEACHEY, 17, Salisbury-square, Fleet-street.

TO BUILDERS and OTHERS.—TO LET, on Lease, BUILDERS' PREMISES, situate at Bankside, Southwark, with workshops, dwelling-house, and convenience for landing from the river.—Apply on the Premises, 49, Bankside, Southwark

CHARING-CROSS.—The desirable LEASEHOLD PREMISES, No. 47, Charing-cross, fitted for a Company or Branch Bank, TO BE SOLD or LET, with or without the Furniture. Possession may be had immediately.—The premises can be viewed, and particulars had of Mr. R. C. PALMER, Upholsterer and Estate Agent, 24, Great James-street, Bedford-row

BUILDING LAND for FOURTH-RATE HOUSES TO BE LET, at Mile-end, in the Parish of Stepney, at moderate ground-rents, with advances to respectable Builders. The ground is admirably adapted for the class of houses proposed to be erected.—Apply to Mr. ROBERT GRAY, Land and Estate Agent, 14, Southampton-street, Strand.

TO FREEHOLD LAND SOCIETIES and OTHERS.—Seventeen Acres of FREEHOLD LAND TO BE SOLD, in one or more Lots, within five miles of London, and five minutes' walk of the Forest-gate Station of the Eastern Counties Railway. It is beautifully situated, and overlooks Lower Ewing Forest.—For further particulars apply to C. C. 20, City-road, London

PREMISES WANTED.—The Directors of the Poor of the Parish of St. Pancras are desirous of Renting, for One or Two Years, PREMISES suitable for the temporary accommodation of the children in the workhouse schools, numbering from 200 to 400.—Full particulars, stating terms and situation, to be sent to C. HIBBARD, Clerk to the said Directors, Vestry Offices, Pancras-road

FREEHOLD BUILDING LAND for SALE, ten acres, having upwards of 4,400 feet of frontage to good roads close to Forest-gate Station, Stratford, Essex, four miles from Fenchurch-street and Shoreditch Stations. Price £200.—Also, between seven and twelve acres, having upwards of 2,000 feet of frontage to good roads, near the Carshalton Station of the Epsom Railway, eleven miles from London. Price, 2,300l.—Apply to D. BLADEN, Esq Solicitor, 2, King's Arms-yard, Moorgate-street.

TO BE SOLD, a newly-built HOUSE, known as No. 2, Bishop's Court, Old Bailey. It is held on a long lease of which about 60 years remain unexpired, at a low ground rent.—For particulars apply to Mr. A. B. SHEPPARD 18, Lincoln's-inn-fields.

FREEHOLD BUILDING GROUND.—TO BE LET or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St. John's-wood. For particulars apply by letter, post paid, to WILLIAM LEWIS, 2, Craven terrace, Craven hill, Paddington.

WORTH NOTICE.—TO BE LET, or SOLD, several ACRES of FREEHOLD GROUND, with Nine Carcasses thereon, covered in; also a large House, with long frontage and ground at back, for building. Attached to these premises are extensive stabling, coachhouses, or cabhouses, and outbuildings.—For particulars, apply upon the Premises, No. 31, Cale-lane place, Pancras vale, opposite the Chalk farm Station; or to Mr. MOORE, 2, Clifford-street, Bond-street.

EAST HAM and BARKING.—BUILDING LAND TO BE LET, on Building Leases, several eligible Lots of LAND, close to the Rising Sun Inn, at East Ham, and near to the station at Barking. The lots will have a frontage of 60 feet to 80 feet, and depths of about 150 feet, and are well adapted for the erection of houses of from 25l. to 35l. a year. Money advanced on security of the building erected, on the certificate of the surveyor.—For particulars, apply to Messrs. GEO. NICHOLSON and SON, 1, Old Palace-yard, Westminster; or to THOS SMITH, Esq 36, Hart-street, Bloomsbury.

TO MANUFACTURERS, PIANO-FORTE MAKERS, CABINET MAKERS, and OTHERS requiring spacious Premises. To BE LET, near the North-Western Railway Terminus, Euston-square, very COMMODIOUS PREMISES, consisting of large Workshops, newly-built, three stories high, about 200 square feet in each floor, suitable for warehouses, a Counting House, Yard, &c. and good entrance to the same.—For particulars apply at Mr. HUGGINTON'S Office, 1, Stanhope-terrace, Gloucester-gate, Regent's-park; or to Mr LEREW, 2, Cardington-street, Hampstead road.

HIGHGATE.—TO BE LET, for a term of ninety-nine years, for the erection of two villa residences, about an ACRE of LAND, having a frontage upon Hampstead-lane of 156 feet by a mean depth of 265 feet; the situation is healthy, and the views unintercepted. For particulars apply to Messrs. PRICKETT and SONS, Surveyors and Valuers, No. 34, Southampton-buildings, Chancery-lane, and Highgate, Middlesex.

FREEHOLD LAND.—WANTED to Purchase a PIECE of FREEHOLD LAND, containing from five to fifteen acres, and, if possible, situated within three miles of the General Post Office.—Particulars as to situation, nature of soil, and cost to be addressed to Messrs. AICKIN and CAPES, 3, Furnival's-inn.

MOORE PARK ESTATE, KING'S-ROAD, FULHAM.—Eligible LAND TO BE LET, on Building Leases, for long terms. Ground rents moderate, and advances will be made, if required. Plans, &c. can be inspected at the Estate Office, King's-road, near Stanley Bridge; or at Mr. Wales's Office, 9, Great St. Helen's, Bishopsgate.

HAMPTON COURT.—About eight Acres of BUILDING GROUND TO BE LET, on 99 years' lease, or SOLD, in small or large plots, near the above Palace and Railway, at moderate rents and prices. An advance of say 50 per cent. on the outlay would be made to respectable parties taking a considerable frontage. A small portion of the ground would be let for shops and cottages if desired; the residue for detached or semi-detached villas and small houses. The estate is already partly covered; also TO BE LET or SOLD, belonging to the same proprietor, a house and shop in a business.—For terms, &c. apply to Mr. F. LETT, Architect, 36, Essex-street, Strand

BUILDING LAND at ACTON, near the Railway Station, in a fine open and healthy situation, and plenty of fine water.—Apply to W. F. LOW, Esq. 67, Wimpole-street, Cavendish-square.

TO THE BUILDING TRADE.—FOR SALE, at Greatly Reduced Prices, 10,000 feet of ornamental BALUSTRADING of various designs; also 1,000 SQUARE BALUSTERS 3 feet high, and about 1,500 TRUSSES, being the remainder of the Annual Sale of the Patent Stone Company.—Apply immediately to Mr. HENRY HODGE, Company's Offices, Whitehall Wharf, Cannon-row, Westminster.

WOLSTON'S TORBAY IRON-PAINTS, Warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 28lbs. of Wolston's Torbay Iron Paint will effectually cover as much surface as 112lbs. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all priming purposes the saving will be immense. Manufactured at the TORBAY IRON-PAINT and OKE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON at the Works or No. 34, Johnstreet, Pedford-row, will have immediate attention.

TO ARCHITECTS, BUILDERS, &c.

CASENTINI and CO. FIGURE and ARCHITECTURAL MODELLERS and CARVERS, beg to draw attention to the extensive STOCK of ORNAMENT, &c. in the Italian, Louis Quatorze, Gothic, and other styles, adapted to the decoration of churches, mansions, villas, &c. Estimates given for new, or the restoration of old work, in town or country.—Show-rooms and Workshops, 21, Hercules-buildings, Westmoreland-road, Lambeth.

NAVVIE BARROWS for SALE at J. BARNES'S, Wheelwright and Manufacturer of Brickmakers' and other Barrows, Ladders, &c.—Address, 23, Picassadilly, Pentonville-hill.—A new Spring Cart for Sale, Cheap.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington Basin

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other impure exhalations, and is entirely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration had taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; and by the Manufacturing and Painting Agent, Mr. FREDK. BABY, Pitsroy Works, Newroad. In Manchester and Liverpool by R. CLAY, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting of houses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS in kegs of 14, 28, 56, and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Manufacture and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

ROYAL POLYTECHNIC.—Patron, H.R.H. PRINCE ALBERT. — On Monday Evening, at Eight, Award of Prizes to Working Men, and address on Trades Schools, by Mr. Buckmaster. On Monday, Wednesday, and Friday, at Four and Nine, the New, Grand, and Imaginative Series of Views, illustrating Bunyan's Allegory of the Pilgrim's Progress, with Descriptive Lecture, by the Rev. J. B. Brasted. On Tuesday, Thursday, and Saturday, at Three, Lecture by J. H. Pepper, on "The Moon Controversy;" on the same days, at Four and Nine, the Historical Entertainment of Kenilworth; at Eight, Musical Lecture, by G. Barker, esq.; and at 3-30 and 8-30, Performances by Mademoiselle Maudeline Cather, and by Herr Ziegra on the London Mould Organ. All the other Lectures on Chemistry, the Electric Light, and Photo-Galvanography, as usual; daily exhibition of the new and large Model of Sebastopol, mounting 2,000 guns and mortars.—Admission to the whole, 1s.; children and schools half-price.

PORTLAND and BATH CEMENTS.
TATHAM and CO.

Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs.
Warehouse, No. 1, Wharf, Paddington-basin.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the superior quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Parsa White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-pots, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.
11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seal street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 89, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 3, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

MEDINA CEMENT CONCRETE BUILDINGS.—This mode of applying cement is suitable for sea groyns, sea walls, and for soldiers' huts, emigrants' dwellings, temporary churches, school-houses, and model cottages, all of which may be built with greater rapidity and economy than with any other materials; good cement and sea beach, or washed gravel stones, only necessary. A sea groyne at London's end two soldiers' huts have been built by them for the Government, at Shorncliff Barracks, near Sandgate, Kent.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKES.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works have obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality. Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms. Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 62, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

BLUE LIAS LIME.—Messrs. GREAVES and KIRKSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cement Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead, whilst the consumption of material is less than for one coat. It dries very fast and hard.
HUBBUCK'S STONE COLOUR BODY PAINT the same as the former, at three fourths the price.
HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and iron exposed to salt water; neither bilge water, nor noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Who'esale Paint Dealers, in original packages, stamped, HUBBUCK, LONDON, PATENT; and when so marked the quality is guaranteed.
HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Timber coated with this Enamel is not attacked by the worm neither do barnacles attach to it.
Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works opposite the London Docks, London.
OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

GREAVES'S BLUE LIAS LIME.—The above Lime supplied direct from the works to wharfs alongside the river's or canals, railway stations, or vessels in the docks. A large supply always in stock.—CHARLES RICHARDSON, Brick, Lime, and Cement Merchant, 3 and 6, South Wharfs, Paddington.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump lime to boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at the Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENTS.
BLYTH, BROTHERS,
16, SOUTH WHARF, PADDINGTON,
AND PLASTER WORKS
BALDWIN'S PLACE, GRAY'S-INN LANE

BLUE LIAS LIME.—CHARLES NELSON can supply direct from the Works in his own boats to any part of the Thames alongside, in the Docks, River Lee, on any canal, or by rail to any part of the kingdom, large quantities of the above GENUINE HYDRAULIC LIME, now so extensively used.
Quality, Weight, and Measure may at all times be strictly relied on; references in proof of the above can be given.
N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enabled to know exactly what weight of Lime he is paying for.
All orders addressed to the
LONDON DEPOT, 16, SOUTH WHARF, PADDINGTON,
BLYTH, BROTHERS, SOLE AGENTS,
Will be promptly attended to, and any further information can be obtained from them
Works, Stockton-field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station in London.—Any further information can be obtained at their Works, Baldwin's-place, Gray's-inn Lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

GREY STONE LIME WHARFS,
12, UPPER GROUND STREET, Blackfriars (Surrey side),
7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Pavlors, and Pickings, of good and sound quality, constantly on sale at Mr. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for asphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and South Western and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods both Welsh and Newcastle). Fire-clay, Flare-burnt Lime, and Marl and Temper Lime; and bare lime is packed in hogsheads, casks, jars, &c. for exportation.
General Office, No. 12, GEORGE YARD, LOMBARD STREET.
Letters addressed to Grays Essex, will meet with immediate attention.

MILLS and PRICE, 8, ADELAIDE-PLACE, London-bridge.

BEST HERTFORDSHIRE MALM SECONDS AND CUTTERS ALWAYS ON HAND.
MILLS AND PRICE, 8, ADELAIDE-PLACE, LONDON-BRIDGE;
AND CROWN WHARF, GREAT SCOTLAND-YARD

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane, Dulwich. Price of good stock bricks, 25s. per thousand on the field, for cash.—Application to be made to the Foreman, A. BANHAM, at the Works.

WHITE SUFFOLK FACING-BRICKS, delivered on the railway trucks, or into barges, at Ipswich, at 38s. per thousand.
SAME CONCERN.—Compact BRICK-YARD, 24 acres, with cottage, kiln shed, barrows, planks, pump, tile machine, &c. 250,000 of earth raised, price 500l.—Apply to WM. P. RIBBANS, Ipswich.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856. Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester

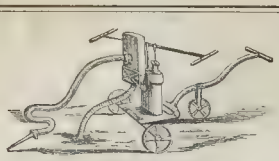
THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of these is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday.
HENRY G. MOUNT, Sec.
97, King William Street, City.

IMPORTANT to BUILDERS.—GREAT REDUCTION in the PRICE of BRICKS.—BRICKS delivered to any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 25s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 30s.; Place, 12s. to 35s. per thousand.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER TILES.
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles delivered in Agent's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURORS," page 561, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.



HOGG'S REGISTERED GARDEN EDGE TILES. The attention of PERSONS ENGAGED in LAYING OUT GARDENS and WALKS for Public Institutions, is solicited to these Tiles, as an improvement on box-edging. In colour they resemble Bath stone, they are impervious to frost, serve to drain the paths, are easily laid down, and last for years without further expense. Price 13s. per 100, or about 4½d. per yard run.—Full particulars will be sent on application to R. BLACKET, Witham, Essex, of whom alone the tiles can be obtained.
P.S. White and Brimstone Suffolk Bricks, and Paving Goods of the best quality.

TO STONEWARE POTTERS, BRICKMAKERS, CONTRACTORS, and OTHERS.—A POTTERY and BRICKWORKS TO BE DISPOSED OF, on easy terms, near a railway station, and within reach of the large Government works now in progress at Winchester, Hamble, &c. &c. The machinery, buildings, and plant are upon the most improved plan, and adapted for carrying on a large stoneware business, for which the clay is well suited. There is ample space and every requisite for making from four to five millions bricks per annum, large sheds for making tiles and red ware; a dwelling-house, stable, &c. &c. The whole in complete order, and now in operation.—For particulars, apply to Mr. F. SCHULTZ, Solicitor, 4, Dyer's-buildings, Holborn, London.

WANTED, immediately, TWO full-sized, strong, single-horse BUILDERS' CARTS, to match.—Apply to Mr. WHITE, 6, Emerson-street, Southwark.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system which gives superior tone and facility for ringing

B. FOWLER, HOLMAN, and CO.

SOLE MANUFACTURERS OF HOLMAN'S PATENT DOUBLE-ACTION CESSPOOL, SEWER FLUSHING, LIQUID MANURE, AND UNIVERSAL FORCE PUMP.

The simplest, cheapest, and best thing of the kind before the public; almost incredible from the substances it will move at times, and so portable that it can be fixed with perfect ease. Delivers a large quantity of fluid, and is a really good article, commanding extensive home and foreign sales.

CROSS'S MANUFACTORY, 22, Lower Arcade, Charing-cross, London. Splendid new designs, both in much-admired dark prices, not to be surpassed by any house in England. Patterns sent for approval to town or country. Cheapest house for panel decorations. Terms, Cash.

PAPER-HANGINGS. — JEFFERY, ALLEN, and CO. beg to inform the trade, they have a large selection of Paper-hangings of their own manufacture, of all qualities, and at very low prices. They confidently invite attention to their best papers, which in price, style, and colouring, are equal to any that can be manufactured. J. A. and CO. are the sole proprietors of the Gutta Percha Paper, and the best remedy for damp walls. Factory, 115, Whitechapel; Show-room, 500, Oxford-street.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive chain and guide-rods are unnecessary, rendering the price considerably less than Pumps made in the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 25 feet; also, Garden Engines constructed on the same principle.

W. HAYDON SMALLPEICE, Clerk.
Guildford, 27th May, 1856.

Sewers Office, Guildhall, 23rd May, 1856.
TO BUILDERS and OTHERS.—The Commissioners of Sewers of the City of London acting as the Burial Board of the said City, hereby give Notice, that they will meet in the GUILDHALL of the said City, on TUESDAY, the 10th JUNE next, at TWELVE o'clock at noon precisely, to receive TENDERS for BUILDING a LODGE, CARPENTER'S SHOP, and SHED, in the City of London Cemetery at Little Ilford, Essex, agreeably to plans and specifications to be seen at the Office of the Engineer to the Commission, in the Guildhall Yard. The Burial Board do not pledge themselves to accept the lowest or any Tender. No Tender will be received after TWELVE o'clock on the day of treaty.—Builders intending to tender for these works are requested to notify the same to Mr. JAMES WOOD, the Engineer, on or before WEDNESDAY, the 4th JUNE.
JOSEPH DAW, Principal Clerk.

EXTENSION of TIME for SENDING in TENDERS, from MAY 29th to JUNE 2nd.—To BUILDERS.—Persons willing to CONTRACT for the ERECTION of a NEW WING to the Mansion of Sir Henry G. Cotterell, Bart. may see the drawings and specifications on and after MONDAY, the 26th inst. by applying to Mr. WILSON, as above. The proprietor does not bind himself to accept the lowest or any Tender, nor will any allowance be made for estimates.
Garnons, near Hereford, May 1st, 1856.

TO GAS CONTRACTORS.
THE DIRECTORS of the OUNDLE GAS COMPANY are ready to receive TENDERS for a NEW GASHOLDER, to be 36 feet in diameter, 12 feet deep, and to hold 30 feet of gas. Two Cast-iron Purifiers. Three Condensers, and a Governor to pass 25 cubic feet of gas per hour. Specifications and plans may be seen at the Office of Mr. ROBERT JOHNSON, of Oundle, Secretary and Company. Sealed tenders will be received until the 25th inst., and the work to be completed by the 1st OCTOBER following.
Gas Office, Oundle, Northamptonshire, May 20, 1856.

TO BUILDERS AND CONTRACTORS.
SWANSEA NEW POST OFFICE.—The Town Council of Swansea are desirous of receiving TENDERS for the ERECTION of the NEW POST-OFFICE BUILDINGS, in Swansea. The drawings, plans and specifications may be seen, and further information obtained on and after MONDAY, the 2nd day of JUNE next, at the Offices of the Architect, Mr. H. HAYLIS, 12, Wind-street, Swansea. Sealed Tenders, endorsed "Tender for New Post-office Buildings," to be delivered on or before MONDAY, the 16th day of JUNE next, at the Office of the Town Clerk, Guildhall, Swansea.—The Council do not bind themselves to accept the lowest or any of the Tenders sent in.
C. B. MANSFIELD, Town Clerk.
Guildhall Offices, 20th May, 1856.

For remainder of Contracts see next page.

CONTRACTS.

TO CLOCK-MAKERS, &c. — Notice is hereby given, that TENDERS will be received at the Office of the Director-general of Contracts, War Department, Pall-mall, London, on or before the 9th day of JUNE, 1856, from such persons as may be desirous of entering into a contract for supplying and fixing at Winchester Barracks, an EIGHT-DAY TURRET CLOCK, with bells to strike the hours, half-hours, and quarters. Persons tendering are required to send in a detailed description of the several parts of the clock, &c. and the method of fixing. All workmanship to be of the best quality, and subject to the approval of the Commanding Royal Engineer. The Clock, &c. to be fixed and in complete working order within two months from the date of acceptance of Tender. Payment to be made one month from the time of completion and approval. The Clock, &c. to be fixed ready to be delivered out on application to the Clerk of Works at Winchester Barracks, and forms of Tender, or any other requisite information may be obtained, and a drawing seen, on application at the Office of the Commanding Royal Engineer, Portsmouth.

N.B. The Master-General reserves to himself the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Portsmouth,
22nd May, 1856.

By order,
HENRY WRIGG,
Engineer and Surveyor to the Board.

Preston, 21st May, 1856.

SOUTH SHIELDS CEMETERY WORKS.

To BUILDERS and CONTRACTORS.—The Burial Board for the Parishes of South Shields and Westoe, in the County of Durham, are prepared to receive TENDERS for the following WORKS in connection with the New Burial Ground, viz.—

CONTRACT No. 1.—TWO CHAPELS.
CONTRACT No. 2. SUPERINTENDENT'S HOUSE, GATEWAY, and GATES adjoining.
CONTRACT No. 3.—GATEKEEPER'S LODGE, GATEWAY, and GATES adjoining.

The Burial Board will not object to receive Tenders for the execution of the whole of the works in one contract. The plans and specifications may be seen at the Offices of the Architect Mr. ROBERT LAMB, No. 5, Ridley-street, South Shields, on and after the 23rd instant until the 30th of JUNE inclusive. Sealed Tenders to be sent in to the Office of the Clerk to the Burial Ground, Chapter-row, South Shields, on or before FIVE P.M. on the 30th of JUNE next, endorsed "Tender for Cemetery Works," Nos. 1, 2, and 3. The Contractor will be required to give security for the due performance of the works. The Board do not bind themselves to accept the lowest or any Tender.

By order,
THOMAS SALMON,
South Shields, 21st May, 1856. Clerk to the Burial Board.

BUILDERS and CONTRACTORS desirous of CONTRACTING for the COMPLETION of TWO PAIRS of semi-detached VILLAS, now in progress at Kilburn, may inspect the plans and specification, and obtain particulars at my Office, on and after WEDNESDAY, the 4th of JUNE. A portion of the contract to be taken off in bricks.

WILLIAM MUMFORD, Architect.

21, Lincoln's-inn-fields.

TO BUILDERS and OTHERS. — Persons desirous of submitting TENDERS for BUILDING a SCHOOL-HOUSE and RESIDENCE, in the PARISH of PETERCHURCH, in the County of Hereford, may see the plans, and obtain copies of the bill of quantities, by application to Mr. GOODMAN, 33, London-road, Gloucester; or to the Architect, Mr. J. P. St. AUBYN, 36, John-street, Bedford-row, London, to whom Tenders are to be delivered in, on or before the 9th day of JUNE next.—The Trustees do not bind themselves to accept the Lowest or any of the Tenders. May 26, 1856.

RICKMANSWORTH CEMETERY. — TO BUILDERS and CONTRACTORS.—Notice is hereby given, that it is the intention of the Burial Board for the Parish of Rickmansworth, in the County of Herts, to enter into a Contract or Contracts for the ERECTION and COMPLETION of TWO CHAPELS and SEVERAL HOUSES, with ENTRANCE-GATES, &c. under the Burial Acts. The plans, specifications, and form of Tender may be seen at the Office of the Clerk to the Board, at Rickmansworth aforesaid, on and after WEDNESDAY next, at the hour of Ten in the forenoon. Any person or persons willing to undertake the said Contract or Contracts, are required to forward a Tender or Tenders, directed to the Clerk of the said Board, at Rickmansworth aforesaid, on or before THURSDAY, the 12th day of JUNE next. The Board do not pledge themselves to pay any expenses incurred in the preparation and submission of the said Tender or Tenders, nor to accept the lowest or any one of such Tender or Tenders in particular.

Rickmansworth, May 21st, 1856.

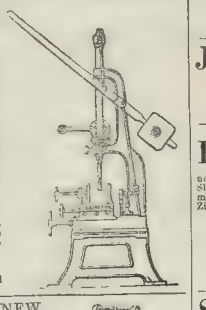
TO ROAD CONTRACTORS and OTHERS.

The Directors of the Lambeth and Provincial Fresh Id Land Society are prepared to receive TENDERS for the FORMATION and COMPLETION of Portions of the SHERNE PARK ESTATE, situate at Corfe Bar, Middlesex—and to the specifications may be seen and at the Offices of the Society, 211, High-street, Borough, from Monday next till SATURDAY. No Tender will be received after SATURDAY, the 7th JUNE next. The Directors do not bind themselves to accept the lowest or any Tender.

WM. BANKS, Secretary.

211, High-street, Borough, May 29, 1856.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,
58, 54, 55, & 57, WYCH-STREET, STRAND,
London.

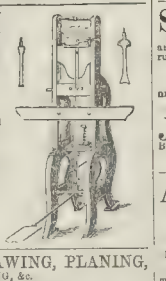


LATCHES, CORNICE POLE-ENDS, &c.

First-class Prize Medal, Paris Exhibition, 1855.

Specimens at the Hardware Court, Crystal Palace, Sydenham.
Illustrated Price-catalogues post-free on application

REGISTER STOVES, with PATENTED IMPROVEMENTS. — DEANE, DRAY, and CO. invite the attention of purchasers to their Stock of STOVES for drawing and dining rooms; also, a large assortment of PATTERNS, suitable for fitting-grates, offices, bedrooms, &c. In Feeders and Fire-Irons, DEANE, DRAY, and CO are constantly introducing every novelty at the lowest prices.—DEANE, DRAY, and CO. Stove, Range, and General Ironmongery Warehouse, London-bridge. Established A.D. 1700.

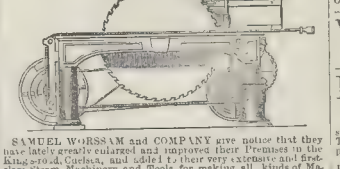


NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', DOWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

KIMBERLEY'S NEW PATENT MORTISING MACHINE occupies but little room, is most simple and durable, and complete within itself, with seven chisels and three core drivers, and being all iron, is almost impossible of injury or derangement.



Thousands who use it bear witness to it.

A Book sent by post, with full particulars, and a great number of testimonials.

See, also, Kimberley's Patent Flooring Cramps, Scaffolding Brackets, Door Springs, &c. &c.

London Agents—
Messrs. PUGH & CO.
No. 13, King-street, Snow-hill,
Wholesale Ironmongers;
or the Works, Birmingham.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added thereto very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to the part of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 84 and 85, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges adapted for dining-room doors, &c., doors lifted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent sale-trees, steam-mills, &c.

IRON FOUNDRY,
HARROW-STREET, LANT-STREET, SOUTHWARK.
W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Iron Plates, Area Gratings, Sash Weights, Pig and other Wheels, Sugars, Pulleys, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

WOOD CUTTING MACHINERY.
JOHN M'DOWALL and SONS,
WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow,
MANUFACTURERS of VERTICAL SAW FRAMES (driven by steam).

For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.

Patent vertical saw frames, of the foregoing dimensions, with steam-power attached; circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from a ½ of an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power morising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-board machines, for ring-boards, &c.; and most select feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 36 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications, as above for further particulars, will be promptly attended to

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Dane's-Inn, St Clement's, Strand

FREEHOLD BUILDING GROUND.—TO BE LET or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St. John's-wood.—For particulars, apply by letter, post paid, to WILLIAM LEWIS, 3, Craven terrace, Craven hill, Paddington.

FREEHOLD LAND, TO BE SOLD, or LET, on lease, in plots of 50 feet frontage, within five minutes' walk from the Forest-gate Station of the Eastern Counties Railway. It is beautifully situated, and overlooks Lower Epping Forest.—For full particulars, apply to O. C. 20, City-road, London.

FREEHOLD LAND for SALE, Land-Tax Redeemed.—SIX ACRES of rich MEADOW LAND, with an old Farm-house, in a pleasant situation, high and healthy, with a view of the Surrey Hills; fine timber growing thereon; thirty miles from London, and three miles from a railway station; just suited for erecting a villa on the grounds, with a row of cottages next to the high road in the village; frontage, 134 feet.—Apply, per post, H. PAGE, 195, Whitechapel road.

WATERLOO BRIDGE WHARF, Commercial-road, Lambeth.—These desirable FREEHOLD PREMISES, with 10 dry arches under the Waterloo-bridge Road, TO BE LET on LEASE or SOLD.—For particulars apply to HENRY MOTT, Esq. Solicitor, 4, King's-road, Bedford-row.

HOLLOWAY. — Valuable BUILDING GROUND TO LET, with liberal cash advances, to respectable builders, admirably situated for good Villa Residences, which are much required in this favourite and highly respectable locality. The situation is most healthy, possesses beautiful and commanding views, and the access to all parts of London easy. Property in this neighbourhood lets and sells rapidly.—For further particulars, apply to Mr. GEO. CLARKSON, surveyor and Land Agent, 48, Penton-street, Pentonville

LAND for FACTORIES and DWELLING-HOUSES, most eligibly situate, lying between the River Wandle and Garratt-lane, at Wandsworth, and near Two Railway Stations, TO BE LET, in one or more plots, for Building purposes. Lease 99 years. Money advanced if required.—Apply to Mr. GEORGE LOW, Architect, 1, Church-court, Clement's-lane, City.

CASSLAND ESTATE, overlooking Victoria-park.—Eligible PLOTS of LAND TO BE LET, for building villas and semi-detached residences; and also Plots of Land, for fourth-rate houses, on the northern portion of the estate.—Plans, &c. can be inspected at the Estate Office, Cassland-road, or at Mr. WALES'S Office, 8, Great St. Helen's, Bishopsgate.

BUILDING LAND TO LET, 150 feet frontage by 159 feet deep, situate at Woodgreen, Hornsey. Rent 20l. a year.—Address W. S. at Stiles's Mineral Water Manufactory, 93, Wells-street, Oxford street.

CAMDEN-PARK, TUNBRIDGE-WELLS. PLOTS of LAND, offering great attraction for building houses and villas, of first-rate consequence, TO BE SOLD, or LET on LEASE for 100 years.—Inquire of Messrs. STONE, WALL, and SIMPSON, Solicitors; or of Mr. J. M. RICHARDSON, Auctioneer, Tunbridge Wells.

LAND.—WANTED, about Six Acres of LAND, of Freehold tenure. It must be within four miles of London; road frontage not material.—Price, and other particulars, to be sent to Mr. J. PONTIFEX, 5, St. Andrew's-court, Holborn.

ISLE of DOGS.—TO BE LET, on Building Leases for a term of 99 years, direct from the freeholder, numerous PLOTS OF LAND, at moderate ground-rents, suitable for the erection of fourth-rate houses, which are in great demand, being in the immediate neighbourhood of manufactories and other works carried on upon the most extensive scale. For plans of the estate and further particulars apply to SAMUEL STRATTON, Esq. Solicitor, 27, Lincoln's-inn-fields; Mr. BLYTH, Surveyor, 113, Aldersgate-street; or Mr. RAMSEY, Estate Agent, 8, Bow-lane, Poplar.

TO BE SOLD, a valuable ESTATE, part Freehold and part Copyhold, situated at Brockley-hill, in the parish of Edgeware, Middlesex, about ten miles from the metropolis, one from Elstree, and only a short remove from Great Stanmore, and comprises 43a. 3r. 32p (more or less); the whole is within a ring fence, and improved by various and luxuriant plantations, having a frontage of 2,000 feet, abutting on the high-road leading from Edgeware to St. Albans. This Estate is well adapted for the erection of a mansion or villa residences, from its commanding situation, overlooking an extensive and beautiful country.—For further particulars and plan, apply to Mr. SIBLEY, Solicitor, No. 11, Sergeant's-inn, Fleet-street; or to Mr. HOLLROOK, Surveyor, Lower Hale, near Edgeware.

LAND at WEYBRIDGE.—GROUND for SIX VILLAS, in the best part of this favourite locality, TO BE LET on lease. Term 99 years, with power of enfranchisement at moderate ground rents. Apply to EDWARD GUILLAUME, Esq. 1, Angel-court, Throgmorton-street.

TO BUILDERS.—FREEHOLD BUILDING LAND TO BE LET on LEASE, for a Term of 999 Years, at Norwood, Harrow, Stratford, Mitcham, Wimbledon, Cheam, Epsom, near Aldershott Camp, and Wharf-road, City-road. Cash advanced, if required.—Apply to Messrs. BLAKE and SNOW, Solicitors, 29, College-hill, Cannon-street, London.

TO BUILDERS. — TO BE SOLD, TEN well-built CARCASSES of FIRST-CLASS HOUSES, situate in Boundary-road, Regent's-park. The houses are detached, and have large gardens upwards of 250 feet deep. The whole purchase-money may remain on security of the property, and the vendor will advance half the amount requisite for completing the buildings. Apply to Messrs. GARRARD and JAMES, Solicitors, 14, Sudbrook-street, Pullman's, London.

TO BUILDERS.—HOUSES are very much WANTED near the Royal Medical College, at Epsom; and this advertisement is inserted hoping that it will attract the attention of some enterprising builder, who cannot fail to meet with encouragement in this locality. Some places are overdone with buildings, but Epsom is underdone, and the demand for good houses is immense. The party inserting this advertisement is in urgent want of a good house near the College, at Epsom; and may be referred to by letter addressed, E. J. P. Post-Office, Epsom

MANUFACTURING PREMISES, situate at Dockhead, TO BE LET, formerly used as a foundry, and known as Mac's Foundry, with foreman's dwelling, pattern-shop and factory, 89 feet by 23 feet, with small warehouse and stable adjoining.—For full particulars, apply to Mr. ELLIS, Auctioneer and Estate Agent, 15a, Minories, City

BUILDERS and OTHERS.—TO BE LET, in one or separate leases, SEVEN SHOPS, in a good neighbourhood. Will be let reasonably, so as for a party to make a good profit-rent. Two let,—the others waiting to be finished for the convenience of tenants.—Apply to Messrs. HILL and MATHEWS, Bury-court, St. Mary Axe.

TO SCHOLASTIC, MEDICAL, or BENEVOLENT INSTITUTIONS.—TO BE LET, on Lease, a COMMODIOUS RESIDENCE, in COMPTON-SQUARE, Bloomsbury, with a large modern Building in the rear, suitable for a Chapel, Lecture or Assembly Room. The furniture and fittings are most appropriate, and are to be paid for at a fair valuation.—Apply to Messrs. RUSHWORTH and JARVIS, Auctioneers, Saville-row, Regent-street, and 19, Change-alley, Cornhill.

WANTED, PERMANENT WHARFAGE, contiguous to the Thames, below bridge, adapted to carry on the stone trade in all its branches.—Apply by letter, addressed Mr. M. 174, Tooley-street, Southwark, with all particulars.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.
H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.
These Pencils are prepared in various degrees of hardness and shades.

H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
M medium.	B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country. An extensive assortment of specimens and patterns commencing at 1s per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BUTT, 2, Charlotte-row, Mansion House; or of Messrs ARROWSMITH and CO. 80, New Bond-street.

RECENT WORKS ON THE FINE ARTS.

Now ready, 3rd edition, with 150 Illustrations, 2 vols. post 8vo. 24s.

HANDBOOK of PAINTING:
THE ITALIAN SCHOOLS.

From the German of KUGLER.

Edited, with Notes, by Sir CHARLES EASTLAKE, R.A. President of the Royal Academy.

"By far the best manual we are acquainted with, for every one who, without the opportunity of foreign and particularly Italian travel, desires to make a real study of art. Its method, its chronological arrangement, and its generally judicious criticism make it most instructive to a learner."—*The Ecclesiastic.*

"Those who require a succinct compendium of the history of Italian painting, will find what they need in Kugler's Handbook of Painting, edited by Sir Charles Eastlake, with numerous and well-executed illustrations of the most celebrated paintings referred to in it."—*Murray's Handbook of Italy.*

II.

HANDBOOK OF ARCHITECTURE;

Being a Concise and Popular Account of the different Styles of Architecture prevailing in all Ages and all Countries.

By JAMES FERGUSSON.

With 850 Illustrations. 2 vols. 8vo. 36s.

"We needed a manual which should give us a succinct account of all the principal buildings of the world; which should be intelligible to the general reader, and yet informing to the professional artist; which should be profusely illustrated with specimens of all the styles known to have existed; and, when we find that it answers perfectly its intended purpose, we treat it as a valuable and welcome addition to our current literature."—*Times.*

"Mr. Fergusson's beautiful 'Illustrated Handbook of Architecture.'"—*Murray's Handbook of Italy.*

III.

HANDBOOK FOR YOUNG PAINTERS.

By C. R. LESLIE, R.A.

With Illustrations. Post 8vo. 10s. 6d.

"Mr. Leslie adds one more to the number of accomplished men, who, like Sir Joshua Reynolds, write as admirably as they paint. Though the title of his 'Handbook' might lead to the inference that it was only adapted for artists, it will be read with delight and instruction by every person who has any enjoyment in pictures."—*Quarterly Review.*

IV.

ART AND ARTISTS IN ENGLAND;

Being an Account of the Chief Collections of Paintings, Sculpture, Drawings, &c.

By Dr. WAAGEN,

Director of the Royal Gallery at Berlin.

3 vols. 8vo.

"The work before us we unhesitatingly pronounce to contain more of the essence of true connoisseurship than any other of the same class that has yet come before the public. Dr. Waagen's name is too familiar to the art-world to require any introduction."—*Quarterly Review.*

V.

THOMAS STOTHARD, R.A.

His Life and Personal Reminiscences.

By Mrs. BRAY.

With Portrait and Illustrations from his Chief Works.

Fcap. 4to. 21s.

"The illustrations, drawn with great care, are printed in a perfectly new style—in sepia—which gives them the effect of drawings. It is difficult at times to escape the conviction that the pencil of Stothard himself has been employed to adorn the volume. We have not opened a prettier volume."—*Times.*

"In Mrs. Bray the painter has found a suitable biographer, one who, with sufficient knowledge of art and literary taste, possesses a hearty enthusiasm for the subject of her memoir. It is a worthy monument to the memory of one whom we respect as a man and admire as an artist."—*Literary Gazette.*

VI.

BIOGRAPHICAL DICTIONARY OF ITALIAN PAINTERS.

Edited by RALPH N. WORNUM.

With a Chart of Contemporary Schools.

Post. 8vo. 6s. 6d.

"As a portable compendium on Italian painters the traveller will find no work in a small space so useful as this; indeed, it may be considered as a necessary companion or supplement to the Handbooks of Italy. Except in rare cases, the artist even will find in it all the biographical details necessary for his purpose, with indications of the principal works of each painter, and a very clear view of the connection of the different Italian schools of painting with each other."—*Murray's Handbook of Italy.*

JOHN MURRAY, Albemarle-street.

LABARTE ON MEDIÆVAL ART.
Now ready, with 20 Illustrations, 8vo. 18s.

AN ILLUSTRATED HANDBOOK of the ARTS of the MIDDLE AGES and RENAISSANCE, as applied to the Decoration of Furniture, Arms, Jewels, &c.
By M. JULES LABARTE.

"M. Labarte's manual is virtually a mediæval history of ornamental sculpture painting, metal-work, and pottery—the history, indeed, of refined luxury. The illustrations are remarkably varied, representing every form of ecclesiastical furniture, of arms and armour, of crowns, thrones, and jewels, of cameos, gold tazes, urns, and ewers—even clocks and saddles. M. Labarte's work is of a standard character, and is, in all respects, a valuable addition to the literature of art."—*Leader.*

"The composition of M. Labarte strikes us as evincing equal learning and intelligence. His knowledge is large, and he has the art of arranging it, with the systematic neatness of the French mind, in a clear and pleasing manner. The volume is illustrated with upwards of 200 wood engravings, representing some of the most remarkable examples in every style of art. As a broad view of the domestic arts of the Middle Ages, and an introduction to their particular study, this 'Handbook' will be found extremely useful and satisfactory."—*Press.*
JOHN MURRAY, Albemarle-street.

MR. HILLARD'S WORK ON ITALY.
Now ready, 2 vols. post 8vo. 16s.

SIX MONTHS in ITALY.
By GEORGE S. HILLARD.

"A very remarkable work on Italy, by Mr. Hillard, entitled 'Six Months in Italy,' by Mr. Hillard, an American lawyer of great literary skill, has appeared: its perusal will well repay the reader, not only on the spot but at home after his return from his travel."—*Murray's Handbook of Rome.*

"Mr Hillard has published an excellent account of his impressions of Italy, bringing to the subject a rich store of classical knowledge, a graceful style, and a remarkable abstinence from any common-place exaggerations."—*Earl Stanhope's Addresses.*
JOHN MURRAY, Albemarle-street.

MRS. LOUDON'S GARDENING FOR LADIES.
Now ready, Eighth Edition, with Woodcuts, Fcap. 8vo. 7s.

EVERY LADY HER OWN GARDENER: being Practical Instructions in Gardening, with a Calendar of Operations and Directions for Every Month in the Year.
By Mrs. LOUDON.
JOHN MURRAY, Albemarle-street.

LOCKHART'S SPANISH BALLADS.
Now ready, a New Illustrated Edition, with Portrait, many Woodcuts, Coloured Borders and Illuminated Titles, 4to. 42s.

ANCIENT SPANISH BALLADS, Historical and Romantic.
Translated, with Notes, by the late JOHN GIBSON LOCKHART.
Also, Post 8vo. 2s. 6d.

A POPULAR EDITION of LOCKHART'S SPANISH BALLADS.

"Of the noble ballads thus collected and adorned, it is needless now to speak. Their reputation is firmly established, and in this form will long contribute to the pleasure of all lovers of art and poetry. Until perceptions of the beautiful have become dull amongst us, such a book is in no danger of losing its popularity."—*Examiner.*

"Fifteen years have elapsed since first the Spanish Ballads appeared in the illustrated edition, which was hailed with so much delight. Now we have a second issue of it, with a character delicacy of tint in its beautiful arabesque bordering, and in some instances the addition or substitution of still more exquisite specimens of that kind of decoration than almost any of the former ones."—*Spectator.*

JOHN MURRAY, Albemarle-street.

TO ENGINEERS, MILLWRIGHTS, &c.
Just published, with additional Illustrations, 11th edition, corrected and improved, 12mo. 8s. cloth.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

PATENT TERRA-COTTA.
Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Paving Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington basin.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the metal primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 82, King William-street City; and by the Manufacturing and Painting Agent, Mr. FREDK. BRABY, Pitcroy Works, Newroad, in Manchester and Liverpool by A. CLAY, 9, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Tumber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in Kegs of 14, 21 and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

WINDOW BLINDS.—Best Wire Blinds, 1s. 5d. per foot; Holland ditto 4d.; and every other kind of Inside or Outside Blind. Spring Rollers, &c. of best possible quality at proportionate prices. No extra charge for fixing in Town or Country. HENRY JINKS, late with R. JINKS and Co. Blind-makers to the Queen, Frames-bank Blind-factory, 4, Caledonia-street, near the Pimlico Steam-boat Pier.

WINDOW-BLINDS. — J. FULLER, Manufacturer, 28, Charlotte-street, Blackfriars-road. Established, 1830.—Venetian Blinds, from 10s. each, or 8d. per foot; Wire ditto 7s. each, or 1s. 4d. per foot; Holland ditto, from 5s. each, or 5d. per foot. Every other description of Blinds equally low, warranted of the best manufacture. Discount to Builders and the Trade. Fixed complete.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is JONES'S WAREHOUSE, 29, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS. — JEFFERY, ALLEN, and CO. beg to inform the trade, they have a large selection of Paper-Hangings of their own manufacture, of all qualities and very low prices. They confidently invite attention to their best papers, which in price, style, and colouring, are equal to any that can be manufactured.—J. A. and CO. are the sole proprietors of the Gutta Percha Paper, an efficient remedy for damp walls. — Factory, 118, Whitechapel; Show-room, 500, Oxford-street.

KENT'S PAINTING-BRUSHES are of the very best quality, and may be obtained at all the first houses in the trade, and of the manufacturers, G. B. KENT and CO. 11, Great Marlborough-street, London. Established 1777.
N.B. Kent's Painting Brushes are all stamped G. B. KENT & CO.
Price Lists forwarded by post.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,

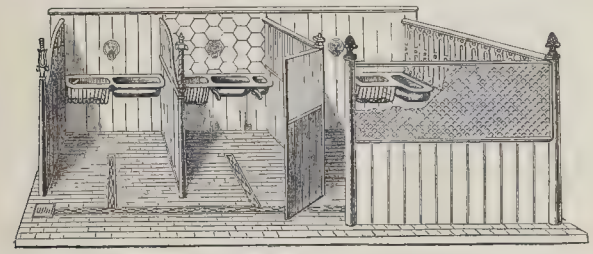
FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES

beyond the current Prices of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	1½	7s. 0d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.



THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent, that a direct end grain of the iron is presented longitudinally, and which become when built into the brickwork, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

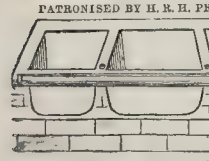
London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the ball of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.



Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings. Cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled. CASTINGS WAREHOUSE, 48, UPPER THAMES-STREET

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THESE FITTINGS will be found to possess all the latest and most important improvements, and are of the best manufacture. All kinds of Stable-furniture in stock. Iron Hurdles, Gates, Fencing, Tomb-railings, &c. New illustrated Catalogues forwarded on receipt of two postage-stamps. JAMES BARTON, Ironfounder, &c. 370, Oxford-street, London.

J. NAYLOR'S IRONMONGERY, NAIL, and METAL WAREHOUSE, 255, Oxford-street, near the Marble Arch.—Builders, Carpenters, Cabinet-Makers, Locksmiths, and Bellhangers, supplied at the lowest prices.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
136, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

FENDERS, STOVES, and FIRE-IRONS.—Buyers of the above are requested, before finally deciding to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 5l. 10s.; ditto, with ormolu ornaments and two sets of bars, 3l. 14s. to 9l. 10s.; bronzed fenders complete, with standards, from 7s. to 9l.; steel fenders, from 2l. 12s. to 6l.; ditto, with rich ormolu ornaments, from 2l. 15s. to 7l. 7s.; fire irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges:—

Firstly, From the frequency and extent of his purchases; and

Secondly, From those purchases being made exclusively for cash.

GASELIERS in GLASS or METAL.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers in metal and glass all that is new and choice in BRACKETS, PENDANTS, and CHANDELIERS, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his establishment the largest and most remarkable in the kingdom—viz. from 12s. 6d. (two light) to 16l. 16s.

The alterations and additions to these extensive premises (already by far the largest in Europe), which occupied the whole of last year, are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes and Turnery, Lamps and Gaseliers, Iron and Brass Bedsteads and Beddings), arranged in Sixteen Large Show-rooms as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.

Illustrated catalogues sent (per post) free,

39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; 4, 5, and 6, PERRY'S-PLACE.—Established 1820.

AUSTIN'S IMPERIAL

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Ridgmount place, Hampstead, March 9th, 1855.

Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extraordinary Gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels, mansions, club houses, private houses, and the army: having cooked in one day 1,000 fowls, and many cwts of ham, beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 336 lbs. in nine hours, fifty-three minutes, presented by J. Bannister, esq. Threadneedle street, to the directors, for the banquet given to the foreign ministers. They have been in full operation for ten months, and are now in as perfect order as when first finished. They have not cost one shilling for repairs.

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.

OLD STOVES and RANGES.—F. EDWARDS, SON, and CO. have constantly on hand a quantity of OLD STOVES and KITCHEN RANGES, in very good condition, which are taken down by them at establishments when they erect new work and which are to be sold at exceedingly low prices.—42, Poland-street, Oxford-street.

LESS FUEL, MORE STEAM, NO SMOKE.
GARDNER'S PATENT SMOKE CONSUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 9, 1855
"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coal. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.
"I remain, dear Sir, yours truly,
"To E. V. GARDNER, Esq. FREDK. ALLEN.
Apply to the PATENTEE, 24, Norfolk-street, Middlesex Hospital; or to Messrs. BURRIDGE and HEALY, 118, Dorset-street, Fleet-street; or Z. D. BERRY, Albion Works, Victoria-road, Pimlico. Bakers' Ovens fitted for M. license included.

TO ARCHITECTS, &c.—The IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most effectual yet invented, is made by T. SMITH, of 14, Queen street, Oxford-street, near Argyll street, where a working model can be seen or will be sent for inspection on the shortest notice.
N.B.—Espagnolette Bolts of a superior quality, at reduced prices.

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements, under their Quadruple patents of 1840-51-54 and 1855, including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).
THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.
MILNER'S PHŒNIX (212°) SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 7, Lord-street, Liverpool. London Depôt, 47a, Moorgate-street, City.—Circulars free by post.
Sold also by HOBBS, ASHLEY, and CO. 97, Cheapside

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES, CASH, DEED, and WRITING BOXES, with their sizes, fittings, and prices, will be sent by post on receipt of two stamps.—Apply to CHUBB and SON, 57, St. Paul's churchyard, London.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

MARBLE.—The Italian Marble Company, Importers of the produce of their own quarries, in the province of Massa-Carrara, Italy, beg to inform the several Marble Trade in the United Kingdom that they are prepared to undertake contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions delivered on shipboard at Leghorn, or in dock, London. A constant stock always on view, and orders taken for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Mortars, Consoles, Chimney-pieces of all classes, Circular Table-tops, Monuments, &c. executed in Italy.—For further particulars, inquire at the Office, on the premises, Bridge Wharf, Millbank, Pimlico, adjoining the east side of Vauxhall-bridge.
WILLIAM W. BONNIN, Secretary.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

Lloyd's Marble Wharf, Thames-bank, Pimlico, Adjoining Vauxhall-bridge.
ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharfat all hours.

MARBLE and STONE CHIMNEYS.—150 MARBLE CHIMNEYS of various designs and colours, most of them fixed, are now on view at the Cambridge Heath Marble Sawing-Mills. The proprietor has again enlarged his workshops, and erected so much improved machinery, so as not only to compete, but is able to manufacture more, and consequently cheaper than any house in the trade.
The Trade supplied.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the lower beds of their quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.
HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

MARBLE MANTEL-PIECES. — The Belgian Marble Company, Importers of the produce of their own quarries, and Manufacturers of Chimney-pieces of Statuary, Veined, Brocatella, Verde-de-Mer, Rouge Royale, and other Marbles, beg to invite Builders and the Marble Trade in general, to an inspection of the largest Stock of Marble Mantel-pieces, now in London, of the latest and most approved designs and at prices varying from 1l. 10s. to 40l.—LAROCHE, PUGIN, and CO. Belgian Marble Works, Freeman's Wharf, Millbank-street, Westminster; and 3, Old Trinity House, Water-lane, City.

STONE! STONE! STONE!—To the TRADE. The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Pavior, Setsface Slab, Granite Pitching and Curb, Guernsey or Kea Road Materials, and every other description of stone, at JOHN KNIGHT and SON'S, Devon Wharf, Mile-end. York tooled paving, 38s. 4d. per 100 feet; slab for hearths, 4d. per foot sup.; slab for chimney-pieces, 3d. per foot sup.; 8 by 3 window-sills, 6d. per foot run; 13 by 3 coping, 9d. per foot run; bed chimnies (any opening), 8s. 6d. each. Terms cash on delivery

TO CONTRACTORS AND OTHERS.
YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS; Horse-hill, Robin Hood, Park Spring, and Gayby, in Blocks, Headstones, and Scabbled; Purbeck Paving, Sinks, Curbs, Rickstones, Pitchers, and Squares; Caithness Flags, Firestone, Newcastle and Bilston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Cliff, and Cliffe Stone, Brantley Fall, Bath, Huddlestone, Park-wood, and other Block Stones. Valentia Slate Slabs, Bangor Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble, in Blocks and Slabs, supplied from the Wharfs, Millbank-street, City Basin, and Deptford; also direct from the quarries by vessel or rail.—Address, FREEMAN'S WHARF, 27, Millbank-street, Westminster.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON Freestone in blocks of any portable size, on applying to FRAS. and OCT. N. SIMPSON, Stamford. Specimens may be seen, and information obtained at the Offices of Messrs. PINDER, SIMPSON, and SONS, 29, Savile-row, Burlington-gardens, London.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

LANCASTER STONE, so remarkable for its free working quality, combined with colour and durability. Price, and cost of transit to any part, may be obtained upon application at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

TO CONTRACTORS FOR PUBLIC AND OTHER WORKS.
THE HAYTOR GRANITE QUARRIES.
TO BE LET, with immediate possession, the no ed and valuable GRANITE QUARRIES of HAYTOR DOWN, in the parish of Bickington, in Devon; twenty miles from Plymouth, six miles from Newton-Abbot, eight from Newton-Abbot, where there is a railway-station, and twenty miles from Exeter. The Quarries are fully opened, and railroads communicate to each of them. They are known by the Old Quarry No. 1, the New Level, working under the sole of No. 1, the No. 2 Quarry, and the magnificent Quarry called Holwell Tor, which are all in a capital state for immediate working to an unlimited extent. Stones of all scantling, from the smallest Kirb to the largest columns or blocks, may be got with the greatest facility. Annexed to the Works are an excellent Bailiff's-house, workshops, and sheds, and, if required, several labourers' cottages. The stone is transported by means of a tram-road and canal to the port of Teignmouth.—For any further particulars, apply to the Duke of Somerset's Agent, Mr. BEARNE, at the Office, Telegrace, Newton-Abbot, Devon; Mr. BEATEN, Teignmouth; or Mr. SOUTHEY, Haytor Down.

RAWDON-HILL STONE.—Messrs. TRICKETT and PERKIN are prepared to execute orders to any extent for their much admired building Stone. Depôts, where large stocks are kept, No. 3, Stone-wharf, Great Northern Railway Station, King's-cross; Victoria Stone-wharf, Millwall, Poplar. Blocks quarried to suit customers for columns, cornice, landings, steps, ledgers, bed-stones, sills, &c. Delivered to any part by vessel or railway trucks.
"This stone when better known, must come into extensive use; I should think it exceedingly valuable for the London market."
C. L. DIESSEN, F.G.S.
Address, JOHN TRICKETT, Headingley, Leeds, Yorkshire; or, SAMUEL TRICKETT, Victoria-wharf, Isle of Dogs, London.
N.B. A large quantity of Foundation Landings for sale.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen or Aubigny port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, IDLE, near LEEDS.
Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cements, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE of BEST QUALITY.—STRONG'S BATH-STONE DEPOT, BOX STATION.—Box Ground Stone, Corsham Block, Ashlar, Rangework, &c. supplied direct from the quarries. STRONG'S STONE-WORKS. Every description of Stone work for Building purposes, both plain and ornamental, prepared ready for fixing. Fountains, Chimney-pieces, Tombs, &c. &c. An elegant variety of Vases, both carved and plain, always on sale—STRONG, Stone Merchant, Box, Wilts.

BATH STONE OF BEST QUALITY
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Box Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cements, Tiles, Quarries, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lavatables, chiffoniers, consoles, &c.; baths baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 4l. 4s. to 10 guineas. Slate Cisterns made to any size.—J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

TO CAPITALISTS.—Capitalists are invited to INSPECT one of the finest and most perfect SLATE FORMATIONS now existing in the Principality, combining an area upwards of one hundred acres in extent, of the most solid material, rarely to be equalled, but certainly not to be surpassed. The quarry can be reached by rail in nine hours from the metropolis, and is only distant seven miles from the South Wales Railway. In the process of manufacture, the edges of the Slate, solely through the operation of machinery, are cut by pressure, and consequently by this mode the Lamina is exempt from flaw or fracture. Specimens of the material will be transmitted to any party who may require them by receiving their address. If after a survey of the quarry, there should be a disposition to treat with the proprietor for the working of he Mine upon an extensive scale, a satisfactory reference would be required.—Address to the Proprietor, Summerton Slate Quarry, Letterston, Haverfordwest. Specimens to be seen at the Office of "The Builder."

SLATE.—HONDURAS-WHARF, BANK-SIDE.—H. SHEFFIELD has the pleasure of informing the trade, builders, and others, that he has an excellent assortment of the best Bangor Slates, at the lowest prices. Shipping and all orders promptly attended to.—Offices also, 6, Reed lane, City

The Builder.

Vol. XIV.—No. 695.

TAKE your ways straight is a Divine commandment, to which a second application may be given. In connection with the plan we recommended the other day (p. 269), for the formation of a grand main street, leading from Piccadilly to Cheapside, there are some points coincident with that object which ought not to pass unobserved. If London were built throughout in the so-so character of the larger portion of its vast extent; if there were no fine squares, no gardens and looses, no commanding buildings and places (or piazzas), then we should not have so much to deplore the original laying out of the streets, ranging, as they do, in all directions but the rectangular. The central quarters even are nearly all obnoxious to the same objection;—the nearer the Temple or the Royal Court, the worse the lanes, the greater the "bizarrerie" of both buildings and arrangements, and the more contemptible the purlieu! Near Gray's-inn, Leather-lane, Baldwin's-gardens, with other familiar places, are too well known: near the Temple, Essex-street is the most respectable avenue: near St. Paul's, Paternoster-row, Ave Maria-lane, Amen-corner, &c. &c. keep up at a respectful distance the invariable characteristic of the ancient cathedral, viz. a plea, "ad misericordiam," for mundane externals: near St. Mary's-le-Strand, and close upon St. Clement's Danes, *Holywell*-street marks again the sanctuary,—the place formerly resorted to for its living waters, is no longer the fountain of health or of *piety*; but near Lincoln's-inn-fields,—how shall we describe the sinuosities, the complexity, and the filth which block up and degrade the very heart of the metropolis? Here is the largest and best situated of our squares (offering a causeway leading direct between the two great arteries of Oxford-street and the Strand) comparatively useless and deserted: it runs nearly half way between both, and yet there is no advantage taken of the easement it offers for a grand traverse street.

A line drawn southward from it, on the west side, would cut the dens of Clare market and street, Vere-street, Duke-street, and other *defiles*, and issue out not far from the front of Somerset House, by Newcastle-street, eastward of St. Mary's-le-Strand.

A little violence might be done to the end of the venerable stack of Holywell-street, one house at the end of which block should come down, to make an appropriate opening; and in continuation large clearances should be made through Clare-market, and the vicinal heaps of dingy houses, which seem to have been accidentally ranged as a sort of maze to amuse the special pleaders who formerly occupied New-inn, Lyon's-inn, and all the other ins as well as outs of the region.

What a misfortune would it be, if the streets and lanes above-named, or any of them, were to be fastened upon posterity by the erection upon the old sites of magnificent structures, such as those which in the City have fixed for long years the narrows of Throgmorton-street, of Lombard-street, of Threadneedle-street, and other leading ways, formerly immortalized by trade, but now by noble buildings.

No, the rising taste of our day, and spirit of improvement, assure us that, in any changes meditated, and hereafter to be carried out, the first requisite of a great population must be considered, and that is an open and direct access from town to city, with equally open and convenient lines of traverse between the principal portions.

Allow St. Paul's churchyard to be bordered with Titanic warehouses, rivalling Cook's emporium, and extend the principle to Paternoster-row,—then, indeed, would St. Paul's be in a fix, and its lofty graces, if not outshone, at least further obscured from passing admiration.

The neighbourhood of Clare-market is tolerably secure, at present, from being fixed or stereo-structured after the manner of the City. The sites are not of the value, nor are the shaky tenements: nor are the interests of monthly tenants likely to increase the purchase considerably; but once practicate a grand leading street through that locality, and an increase of 200 per cent. will be added to the value. Therefore it is, that in any plan for extensive changes, a wide scope should be taken in the first appropriation of such poor and crowded neighbourhoods; and more particularly due care should be had for the allocation and arrangement of *suitable lodging-houses* for the evicted occupants. The model lodging-house has too much of the poor-house, or parochial, or eleemosinary character, to be palatable to the industrial classes of our day; not so streets with separate houses, having but *two tenements* upon a floor: these would be eagerly sought by clerks and assistants, and respectable operatives, having families; to whom propinquity to their avocations would render commodious and moderately-priced chambers an inestimable boon.

The great traverse street (suppose we call it Lincoln-street) would issue into Holborn, and, bearing northward, come on to King-street and by Southampton-row, and afterwards Seymour-street, into Hampstead-road, and so *straight* from the Strand for a distance of nearly three miles. The short interval between Orange-street and Holborn (about 300 feet) should be opened respectably, so as to form a grand street, surpassed by none other; having in its course Russell-square and Lincoln's-inn-fields as vents, and Oxford-street and the New-road as traverses; but, in fact, the way is made already, as will be seen by reference to the map: it needs only to be opened out and connected at the intervals described.

Such a plan as this,—so easily effected; comparatively, so inexpensive; offering to the largest municipalized congregation of earth easements and facilities hardly to be calculated, would act as a ventilating duct, whilst it would give scope to free intercommunication. It may have occurred to many, and is now urged as a corollary to the preceding article of the "Via Sacra."

ON DECORATIVE PAINTING OF THE THIRTEENTH, FOURTEENTH, AND PART OF THE FIFTEENTH CENTURIES.*

In a work upon ornament, recently published by the School of Design, it has been well observed that, for want of a more general knowledge of the variety of styles, the designer has been reduced to merely copying his neighbour, and hence the prevalence of the Louis Quatorze and Roccoco styles in the great London Exhibition of 1851. An extension of knowledge thus recognised as so important, leads to experience, and without these qualifications the most brilliant genius must be comparatively lost.

In bringing forward this matter, I may be said to hold a somewhat anomalous position. Without being an architect, I venture to address those who have made architecture their chief study. It is not upon that glorious science direct that I propose to offer any observations, but upon her important handmaid *painting*, and, as far as is inseparably allied with her, *sculpture*, that I shall venture to address you. Painting, then, as subservient to architecture, where the internal composition and arrangement of colour *must accord with a given space*, is to be my theme; and that rather in the way of pointing out examples of what has been done, than to lay down laws for guidance. I conceive it to be more useful, as I have had the advantage of travelling and spending much time abroad, to give a few notes of some of the most important examples of figure-painting connected with architecture, arranging them in chronological order, and touching upon the leading historical facts associated with them, rather than to confine myself to architectural ornament and patterns alone.

At the commencement of the thirteenth century, King John had just been seated on the throne of England.

The crusaders from the West were thundering at the gates of Constantinople, no longer to be recognized as a city occupied by descendants of the Roman emperors, who had deserted the banks of the Tiber since the days of Constantine. More Greek as a nation, and in constant intercourse with Persia and other nations of the East, they maintained tastes and customs totally different from those in the West. The very name of their city in use before the advent of the Romans was not extirpated; for the original name Byzantium is still retained, and we yet speak of Byzantine art and the Byzantine empire, although referring to a date subsequent to the conversion of the city to Christianity, and the Romans had, as the seat of empire, endowed it with the name of Constantinople.

The wealth of the city of the Greco-Roman empire was exhausted at the time of the siege, and Nicetas, an eye-witness, gives a lamentable account of the plunder and misconduct of the Western assailants when they became masters of the city. Then it was that the remaining statues that had been transported to Constantinople, and had escaped the ravages of time, were finally doomed. The last works of Myron, Polycletus, and Lysippus were melted or pounded into fragments for mortar, and many a fabric of the most costly material was wantonly destroyed. But to the rich stuffs and patterns, the elaborately-wrought metal ornaments, furniture, and utensils, that escaped destruction, and were transported to distant climates, may be assigned no trifling importance in the influence they exercised on foreign tastes. The sack of Constantinople, or Byzantium, carried a peculiarly Oriental taste to the far West in 1204, and the same city 250 years later exercised an almost greater influence when it received the Turks for its masters, and poured forth the remainders of the Greeks and the descendants of the Roman empire.

To return to our starting-point, the reign of King John, before the Italians of the middle ages could point to any one building of similar importance, a magnificent fabric arose in England (1206), with sculptures fully equal both in execution and design to the works of the Italian Niccola Pisano, who appeared nearly half a century later. This was the present beautiful cathedral of Wells; and another edifice of similar character, but still greater purity, was founded fourteen years later. The cathedral of Salisbury, with its chapter-house and exquisite Gothic sculptures, was founded 1220.

The condition of Italian art at this period may be inferred from a famous mosaic on the outside of the Duomo, or Cathedral of Spoleto, by one Solsternus, dated (according to Rossini) 1207.

The taste for the earlier Christian architecture, after it had emerged from the catacombs, at the time of Honorius and the Empress Galla Placidia (440 A.D.), will be seen in a view of the interior of her chapel at Ravenna.

During the reign of King John, two religious enthusiasts arose, independently of each other, with the desire of reforming the abuses and corrupt life of the monastic clergy. They both professed poverty, and became founders of the mendicant orders called, from their names,

* From a lecture by Mr. G. Scharf, jun. read at the Architectural Museum on the 13th inst.

Domenican and Franciscan. St. Domenic, in Spain, by his active zeal carried all before him, and by his preaching led to the fifth crusade, and, above all, to the persecution of the Albigenses. St. Francis lived retired in his convent at Assisi, near Perugia, and there died. Both of these holy men exercised no small influence on the arts; not so much by their lives, as by their deaths, for it was thought necessary upon their interment and canonization to bestow all honours possible upon their memory, and the arts were called into requisition. A magnificent church, with paintings, was reared in honour of St. Francis, at Assisi; and a superb sarcophagus adorned with sculpture, to St. Domenic, at Bologna.

The order of St. Domenic was confirmed the same year that Henry III. ascended the throne, and the order of St. Francis seven years later. Niccola Pisano, the great sculptor, began the Sarcophagus of St. Domenic in 1234.

In 1228 the great convent church and monument was begun to the memory of St. Francis. It was the work of a German architect named Jacopo di Lapo, who was appointed by Frederick II. emperor and king of Sicily. The church was completed in two years, and is the first specimen of Pointed architecture north of Rome. This style, peculiar hitherto to Sicily, had been imported from the east and established by the Saracens, who had spread themselves so rapidly along the Mediterranean. The emperor, being a Sicilian, may have been designedly instrumental in inculcating the new style. As a specimen of what it had already attained in Sicily, I would refer to the Chapel of Monreale, near Palermo, 1174. Giunta Pisano was the leading artist of this time in Italy. He executed a portrait of St. Francis, from the life, still preserved at Assisi, and contributed several fresco paintings to the walls of the upper church. All this happened before the birth of Cimabue, whom Vasari claims as the father of Italian painting. Meanwhile, our own country was not indifferent to the fine arts. Henry III. however weak he may have been as a ruler, was an earnest patron of the fine arts: he built Westminster Abbey and a magnificent shrine to Edward the Confessor.

At the same time, Bishop Poore, having erected the stately cathedral of Salisbury, commenced the celebrated nine altars at Durham.

England has a greater amount of records still preserved, of disbursements and orders given in remote times, than any other country, and it is very interesting to turn to these old documents, laid up at Westminster and in the Tower, and read sums paid and orders given for such and such paintings. I append two or three, both to show the taste of our ancestors at this period and the choice of subjects for their palaces and chapels.

In the year 1233 (the year of the establishment of the Inquisition), an order was given to the Sheriff of Southampton to have the King's wainscoted chamber in Winchester Castle repainted with histories and pictures.

In 1235 the Castle Chapel at Guildford was to be adorned with two tablets, one a crucifixion with Mary and John; the other a Majesty and the Four Evangelists.

In 1236 Henry issued an order to have the wall of his chamber painted green like a curtain.

In the year following one of the chambers was entrusted to the sheriff of Southampton to be coloured green, and starred with gold, and painted with the histories of the Old and New Testament. Oil and varnish are especially included among the materials used in the year 1238.

The keepers of the Tower of London were required to have the chapel of St. John whitewashed, and painted glass to be inserted. The church of St. Peter within the Tower to be beautified also.

In 1242, when Cimabue was only two years old, the king ordered a series of pictures from the Old and New Testament to be wrought in the chapel of Windsor Castle; they were not, however, finished till six years after.

In 1245 the Sainte Chapelle at Paris, and the nave and transepts of our Westminster Abbey were commenced, the Tower of Chichester had been just completed, and Rheims Cathedral also, by Robert de Coucy.

St. Stephen's Chapel, at Westminster, a fair parallel to the Sainte Chapelle, was just built, and an order is extant of 1245, to Edward, the son of Odo, the king's goldsmith, to paint on one side of the chancel, a beautiful figure of the Blessed Virgin, and on the other the king and queen. The same artist was desired in 1250, to paint in St. Stephen's Chapel, Apostles, the Last Judgment, at the west end, and the portrait of the Blessed Virgin on a board.

In the same year, the king ordered the "History of Antioch," to be painted at the Palace of Clarendon; and Edward of Westminster desired to paint the queen's low room at Westminster, with the "gests" of Antioch, and to copy the same from a large book, to be lent by Sandford, master of the Knights Templars. In 1248, is mentioned Brother William, a monk, of Westminster. He painted the King's Chapel, at Windsor.

The sheriff of Southampton was ordered to have a St. Christopher and King Edward, and the ring with the pilgrim, painted on the west gable of the Queen's Chapel, at Winchester.

At this time, 1250, Cimabue was only ten years old. The chief material for decoration in Italy was mosaic and Tarsia, or wood inlay. In mosaic the shape of each piece of stone or glass is lost in the pattern. In opere di commesso it forms a part of the design.

The Spoleto mosaic I have already pointed out, and may mention that Cimabue, in adopting the process, greatly improved on the system, and in the year 1300 executed a fine mosaic for the tribune of the Duomo, at Pisa.

The Madonna, of Cimabue, was carried in procession to the church. The next generation included Giotto, and the illustrious poet Dante, who in the year 1300 was at the height of his political influence. Giotto, the shepherd lad, was adopted by Cimabue, and being initiated into an art that had just attained sufficient development to express passion and sentiment, the youthful painter applied this technical skill to his own poetic and original conceptions, and produced a series of works, which for intention and individuality have never yet been surpassed. Dante, the poet, assisted him, and so rapid was his pencil, that he travelled all over Italy, leaving in almost every town of importance some monument of his skill. But it was at Assisi, under the banner of St. Francis, that he most particularly distinguished himself. He also wrought in mosaic, and was summoned to Rome by the Pope.

The long reign of our Henry III. has afforded us a great variety of events and enterprises. With the reign of Edward I. is generally introduced the period of the Decorated architecture, 1272. The Early English or Pointed had prevailed in England since the death of Henry II.

In the beginning of the fourteenth century, Arnolfo da Lapo, son of the architect of the church at Assisi, died, leaving the Duomo of Florence considerably advanced, but incomplete. Brunelleschi, many years afterwards, added the dome; but in executing this wonder of mechanical skill, as we shall see presently, he merely carried into effect the designs of Arnolfo.

In 1332, Simone Memmi painted the walls of the Spanish chapel at Florence.

In the paintings of St. Stephen's Chapel, at Westminster, judging by copies and engravings extant, there is great affinity to the works of Giotto, and those in the Incoronata at Naples.

During the reign of Edward III. of England, Rienzi, the tribune, pursued his romantic career at Rome and Avignon. In the same year that the battle of Cressy was fought, 1346, Rienzi mounted the Capitol, and published his laws.

The style of art and system of employing it with allegory to address the minds of the people, is curiously shown by the banners he had painted, &c.

The same year (1354) that Rienzi died, Marino Faliero was beheaded.

The same taste for allegory and wild fables was fostered by Petrarcha; and Orcagna, in 1360, painted the "Triumph of Death and Judgment" in the Campo Santo, at Pisa; Pietro Laurati, Hermits, &c.; Giov. Pisano, erected the Campo Santo.

The year 1348 is a remarkable date for events, both in England and Italy. With us the chapels of St. Stephen, Westminster, and St. George, at Windsor, were completed and endowed; and at Florence, the most terrible plague ever known, broke out. This afforded to Boccaccio an excuse or motive for his celebrated tales,—the Decameron; and it led, with a far better feeling, to the construction of the famous tabernacle in the Or San Michele, at Florence, which was completed by Orcagna in 1359. The Perpendicular style began with Richard II. in 1377. Brunelleschi was born in 1377; Ghiberti, in 1380.

[Mr. Scharf showed numerous illustrations of the early Italian wall paintings, copies from the decorations of the Painted Chamber, and St. Stephen's Chapel, at Westminster, together with *fac-similes* of illuminations in MSS. and miniatures, by Matthew Paris, in the British Museum. He also explained the arrangement of subjects on the walls of the Campo Santo at Pisa, the Brancacci and Spanish Chapels at Florence, and the Sistine Chapel, and that of Nicholas V. in the Vatican.]

To connect varieties of style with dates and historical events, seems to me a system of the utmost importance. How often do we find the spirit and feeling of ornament and patterns allied to the habits of the day! In costume this is particularly the case, and pervades even the minutest details, from the bonnet-clasp to the shoe-button. In furniture and tapestry it is more conspicuous still; and it is not a little curious to observe, notwithstanding the comparative difficulties of intercourse, how the same fashions prevailed at the same time in France, England, Italy and Spain. I shall probably have disappointed by the manner in which I have treated the subject entrusted to me. The chief point we have to deduce from examples before us, is the connection between the period, sentiment, and style of bordering, or architectural framework, and the subject actually inserted in compartments by the figure painter with the architect at his side. We now but too frequently see strange discord between the contents of the panels or the statues and ornaments and the architecture itself. The same applies to painted glass windows, where a want of consistency may be detected. Sometimes this is owing to a *partial* use of a good original with inferior filling in, or from an injudicious use of various materials to work from.

When the designer, either on a large or small scale, who can work out every part *himself*, apportions the labours definitely and clearly to his workmen, it seems almost impossible to miss a satisfactory result. Mechanical excellence is fast rising; and whether the painter be the architect, or the architect the painter, or both of these be "rolled" into one gentleman—the sculptor,—it matters little, for they are all three inseparable.

ON THE RESTORATION AND PRESERVATION OF WOOD CARVINGS.

At a meeting of the Institute of Architects, on the 28th ult. Mr. Henry Crace said,—Being much interested in the preservation of the various beautiful carvings of this country, more particularly those of the seventeenth century, I have considered that it might be of use to give particulars of some I have lately restored for the Worshipful Company of Mercers, in their Hall, which was rebuilt after the Fire of London, in 1666. I found the whole had been removed out of the Hall, the architect fearing they might fall from the panelling, as they were worm eaten in parts into perfect dust, and principally kept together by the large quantity of paint, varnish, &c. they had received from time to time. A small piece of one of the leaves which Mr. Eugene Barnes, clerk to the company, had preserved, and placed under a shade, shows the perfect honeycomb the wood had been reduced to when the dust was blown out. The main stem is of deal, the fruit, flowers, &c. are of lime, pear, and beech. Had the carvings been more perfect and wholly of oak, or any one wood, I could have restored them to their primitive colour and freshness.

It may now be necessary to explain what has been done to them. The carving is of the same colour as when taken down. I merely washed it, and with a gimlet bored a number of holes in the back, and into every projecting piece of

fruit, and leaves, on the face, and placing the whole in a long trough, 15 inches deep, I covered it with a solution prepared in the following manner:—I took 16 gallons of linseed oil, with 2lbs. of litharge, finely ground, 1lb. of camphor, and 2lbs. of red lead, which I boiled for six hours, keeping it stirred, that every ingredient might be perfectly incorporated. I then dissolved 6 lbs. of bees'-wax in a gallon of spirits of turpentine, and mixed the whole, while warm, thoroughly together.

In this solution the carving remained for twenty-four hours. When taken out, I kept the face downwards, that the oil in the holes might soak down to the face of the carving, and on cutting some of the wood nearly 9 inches deep, I found it had soaked through; for I should observe that not any of the dust was blown out, as I considered it a valuable medium to form a substance for the future support of the wood; this has been accomplished, and as the dust became saturated with the oil, it increased in bulk, and rendered the carving perfectly solid.

Each panel has consumed a little more than a gallon of the solution; they have been finished about five months, are becoming quite hard, and in the space of four or five years will be as hard as any wood. I have no doubt that in twenty years they will become so hard that no knife will cut them. Every gentleman present is aware that common putty becomes so hard within that period, that in hacking out a broken square of glass the wood is frequently destroyed, the putty being harder than the wood.

In my case the ingredients used will become more quickly hard, and I am confident that the carving is now more durable than at the hour it left the carver's hands. The holes made by the gimlet are left open, that the air may penetrate to assist in the solidifying of the decayed parts of the wood: at the same time we are aware that no insect can enter it, and it is impossible for any such to subsist on the composition introduced.

With reference to the cleaning and restoring of old carvings, I can state that my experience ranges over a period of fifty years, having commenced in the restoration of the very handsome wards of Greenwich Hospital.

Before that period it was the fashion to wash the oak compartments and varnish them, by which process, and with time and filth, they had become perfectly black, or rather of a chocolate colour. We set to work to clean them, and at last succeeded in bringing them back to their original freshness; and I believe that during that period my father had the works, and afterwards my brother and myself: every ward fitted up with oak was restored.

The Chairman (Mr. Penrose) mentioned a case in which some carving that had been much worm-eaten was preserved from further injury by dropping corrosive sublimate, by means of a pin-point, into all the holes.

Mr. Crace observed, that in some of the specimens before the meeting there was only a single hole in one piece of fruit, yet the whole of the interior substance was converted into powder, and the mischief could not therefore be remedied by the use of the pin-point. The insect which had committed these ravages was a small brown beetle, about the size of a pin's head.

Mr. Jennings, Fellow, considered that the beetle was the perfect form of the worm, which was in reality the eating insect. He had seen it in both conditions, and believed it did not pass through any intermediate chrysalis state.

Mr. C. H. Smith, Hon. Member, observed that the insect which was so destructive to ship-timber was unquestionably a worm, but in the present instance he believed it was the small beetle described by Mr. Crace, being similar (except in size) to the wood-louse and the cockchafer.*

SOUTH SHIELDS BURIAL BOARD COMPETITION.—Competitors are inquiring to whom the second premium has been awarded, and when their drawings will be returned?

---

* At the next meeting of the Institute of Architects, to be held on Monday evening, the 2nd of June, the following Paper will be read—"On the Domestic Brick Buildings of the Sixteenth Century in Bruges, and other Places in Belgium," by R. Dennis Chantrell, Fellow. *The President.*—In consequence of the loss which has recently occurred in the family of the president, Earl de Grey, his lordship's annual *conversazione* to the members and friends of the Royal Institute of British Architects will not take place this year.

THE MATERIAL RESOURCES OF RUSSIA.*

BRICK-MAKING in Russia does not possess anything like the comparative importance it does in other countries. The greater number of the towns are built of wood. Comparing the value and progress of building and the value of bricks in France with that in Russia, the author estimates the value of bricks in France at eight millions of roubles, or thirty-two millions of francs, while the value of those in Russia he estimates at only two to two and a half millions of roubles. In France, so long ago as 1836, bricks and tiles were manufactured to the value of 28,112,000 francs; lime to the value of 23,827,000 francs; and plaster to the value of 14,714,000 francs. In Russia the brick manufacture is principally concentrated around the two capitals. The Moscow and St. Petersburg brickworks furnish at least two-fifths of the total consumption: the bricks are said to be of good quality, but very high priced. Large sized bricks cost at St. Petersburg 16 to 23 roubles per thousand: in France their price is 25 to 30 francs = 6¼ to 7½ roubles.

The manufacture of articles in terra cotta, such as statuettes, bas-reliefs, and other architectural ornaments, has lately been introduced; and this manufacture, of which the products, especially for external architectural ornaments, are very appropriate to the climate, it is thought may gradually acquire some importance.

Adding to the brick manufacture that of lime, plaster, and other cognate industries, M. Tegoborski considers that the annual produce of the whole may be estimated at 5 millions of roubles: the number of workmen employed at about 15,000.

The glass manufacture has, it seems, made marked progress in Russia within the last ten or fifteen years. The improvements introduced into the manufacture have brought down prices; but these are still much higher than the French and Bohemian. Under a protective duty of fifty roubles per pood, equivalent to from 250 to 500 per cent. *ad valorem*, the importation in 1848 was to the value of 16,308 roubles, and in 1850 to 53,609 roubles; but the duty having been reduced from January, 1851, to twenty roubles (still equivalent to 150 per cent.), the importation for that year amounted to 78,200 roubles. Most of the Russian glass works are situated in well wooded districts, where fuel is cheap, and the great difference of price is attributed to a want of competition, or to waste or errors in the processes of manufacture. "It is somewhat remarkable, however," says M. Tegoborski, "that whilst we ought to be able to furnish common window glass cheaper than any other country, a pane which sells for forty rupees at Vienna, costs seventy-five at St. Petersburg." This he ascribes to the long carriage, and to other circumstances affecting the Russian trade in general,—bad roads, we presume, or total want of roads, being one considerable circumstance amongst those here hinted at.

The manufacture of blown glass is said to have been greatly improved of late, but still prices are very high as compared with foreign countries.

The number of glass works in Russia in 1848, according to official returns, was 223, of which 27 were in the government of Wladimir, 22 in that of Wilna, 17 in that of St. Petersburg, 11 in that of Riazan, 10 in Livonia, 26 in the kingdom of Poland, and 16 in Siberia. Besides these there were 5 or 6 in Finland, making in all about 230 establishments. The total products of the manufacture are estimated approximatively at 2,500,000 roubles, and the number of workmen employed at nearly 10,000. In France there were 165 glass-works in operation in 1836, producing to the value of 47,474,300 francs = 11,868,600 roubles; and from the progress of the manufacture since then (manifested *inter alia* by the increasing exportation) the production must now amount to 13 or 14 millions of roubles. In Austria the total produce of the glass manufacture, including crystal and looking-glasses, was valued in 1845 in the official statistics at 17½ millions of florins = 11,025,000 roubles, and must now, it is estimated, be about 12 millions of roubles.

---

* See page 238, *ante*: notice of M. de Tegoborski's book.

In Russia there is a large manufacture of window glass. In the large towns the houses and public buildings are spacious, and the severity of the climate necessitates the use of double windows.

The author, on the whole, regards the glass manufacture of Russia as being progressive, but impresses on the native manufacturers the necessity of sedulously applying themselves to the introduction of those improvements which would chiefly tend to diminish the cost of production.

Cabinet work is considered as both very perfect and very inferior, "according to the side on which it is looked at,"—not in the article itself, but as regards the two phases of luxury and poverty which prevail in Russia as elsewhere. The manufacture of luxurious furniture, says M. Tegoborski, is pushed, especially at St. Petersburg, to a high degree of perfection; but, although foreign woods are as cheap as anywhere else, the prices of the manufactured articles are most exorbitant, and out of all comparison with those of other countries; so that a little exportation to St. Petersburg might not be a bad speculation. This is ascribed to the high cost of skilled labour, from the limited number of good artizans and the want of competition. Common furniture, on the other hand, is of very bad quality: the wood is seldom well seasoned, and the workmanship is almost always careless. So is it with joiners' work in buildings. The doors and windows of the middle-class houses in St. Petersburg are generally warped, and will not shut close: in the provincial towns they are said to be still worse.

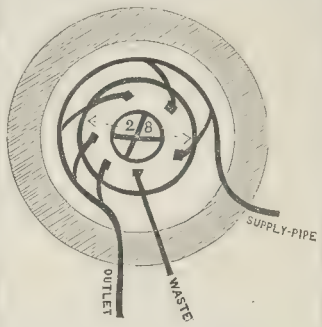
The crude value of all the industries treated of by the author, he estimates roughly at 500 millions of roubles; and the value which they add to the national wealth, exclusive of the raw material worked up, he sets down at 325 millions of roubles. The total number of persons,—men, women, and children,—employed in these various industries, he slumps at six millions. For other trades and professions not comprised in these, he adds 400,000 more, including masters, journeymen, and apprentices, and forty-eight millions of roubles as the product of their labour. These results, summed up as 500 millions of roubles, crude annual value, adding to the national wealth 375 millions of roubles, he compares with those of France, adduced by Schnitzler, as upwards of three milliards, and estimated by M. Tegoborski as now at least 3,500 million francs, or 875 millions of roubles; and with those of Austria, estimated at 795 millions of florins, or 500 millions of roubles, and further increased by the author to 550 millions of roubles. He thus regards Russia as on an equality with Austria as to the value of her various industries, and as 100 to 159 with France in these respects.

Of the building-timber exported from Russia England admittedly takes upwards of three-fifths. Prussia is next in importance to England as a purchaser of Russian timber, but the larger portion of the exports to Prussia itself is on British account. The value of building-timber exported to England, in the three years ending with 1853, is estimated at 1,955,100 silver roubles: to Prussia it was 1,367,000 silver roubles. The value of the building-timber exported to all countries was 4,285,700 silver roubles. In the timber trade of the empire, beams, deals, and staves are the chief articles exported,—beams to the value of 1,937,500 silver roubles, deals to the value of 1,430,900 silver roubles, and staves to the value of 349,100 silver roubles: all other sorts are valued at 518,200 silver roubles. More than three-fifths of the timber are exported by the Baltic, and nearly one-third by European frontier. The Baltic exports are chiefly from Riga and St. Petersburg, averaging 1,485,000 roubles from the former, and 965,600 from the latter. Pine and fir beams, about 160,000 piece, are chiefly exported by the Niemen and the Prussian port of Memel, and from the kingdom of Poland by the Vistula. Oak beams come mostly from Minsk and Volhynia to Prussian ports. Deals (about 2,000,000 pieces) are exported principally from St. Petersburg, but also from Riga, Narva, and the White Sea ports.

The average annual exports of all kinds from Russia by sea in 1849-53 are valued at

87,950,800 silver roubles, and by land 5,630,100. The imports of all kinds for same period averaged, by sea, 71,521,900 silver roubles in value, and those by land 6,394,000 silver roubles. Of the total imports, 26,363,400 silver roubles was the value of those from England alone, and 49,314,600 silver roubles that of the exports to England alone. The exports to Prussia are valued at 10,874,600 silver roubles, and the imports from Prussia 14,368,700 silver roubles, much of this traffic doubtless being also English ultimately. The next in importance to Prussia in reference to imports and exports is France, whose imports to Russia are valued at 8,301,800 silver roubles, and her exports from Russia at 8,237,600 silver roubles. It is admitted that nearly two-thirds of all the *exports* from Russia "are absorbed by the United Kingdom." Only three-tenths, however, of the total *imports* are estimated as arriving *directly* from England. France takes less than 8 per cent. of the exports, and sends nearly 10 per cent. of the imports. Austria takes about 6 per cent. of the one, and sends about 7 per cent. of the other. The general balance of exports over imports is only 20,709,200 roubles, although the trade with England alone presents an excess of exports to the extent of 22,951,200 roubles (or 3,634,000*l.*), so that all other countries taken *in cumulo* present a balance against Russia of 2,242,000 roubles only. Raw cotton and wool, dye stuffs and machinery, are the chief imports from England, and cereals, tallow, fibrous materials, and timber are the chief exports to England.

The English vessels employed in the Russian trade during 1849-53 were 3,977 in number, with a tonnage of 449,046 lasts, while those of Russia itself were only 2,188 in number, with a tonnage of 183,269 lasts. One of the next in importance was Austria, which had 638 vessels so employed, with a tonnage of 104,308 lasts. The English per centage on the whole shipping trade of Russia was 31·7, the Russian 12·9, and the Austrian 7·4. But in the triennial period 1824-28 the English per centage was 47·5, and as the Russian was then about the same as during the latter period, the shipping of other nations so employed has been on the increase, particularly the Turkish, which increased from 156 to 1,797 vessels, and the Dutch, which increased from 359 to 1,181 vessels. The Greek trade has, of course, wholly sprung up since about the earlier period,—and in 1849-53 it employed no less than 1,268 vessels, with a tonnage of 141,356 lasts, or 10·0 per cent. of the whole of the Russian shipping trade together. This is an instructive and significant item in the modern relationship of Russia to the Greeks, though, as yet, not exactly to those still of Turkey. Greece now ranks above Austria on the shipping list just quoted. It is also an important circumstance, as regards *our* influence over Russia, that "the English trade," as M. Tegoborski takes care to note, "though still foremost in rank, has lost much of its preponderance." Besides the Greek marine, the Black Sea trade of Russia has attracted a number of Italian vessels to its southern ports. The flags of all the Italian States together reckoned up only 29,333 lasts during 1824-28, but during 1849-53 that tonnage was tripled, and the Sardinian flag alone counted 78,180 lasts, and the Neapolitan 20,822.



THE WATER-TOWERS AT THE CRYSTAL PALACE.

As a more intimate knowledge of the structure and character of these erections than can be gained by a mere casual observation is likely to be interesting to our readers, we subjoin a few particulars respecting them.

The foundation of each tower is composed of a ring of Portland cement concrete, the dimensions of which are,—outside diameter, 58 feet; width of the ring, 11 feet; depth, 3 feet.

On this foundation are erected 780 cubic yards of brickwork, also in Portland cement. This cylinder of brickwork is 18 feet in height, with an average thickness of 7 feet, carrying the entire structure of outer base plates, columns, face-panels, tanks, balcony floors, and roof. The diameter of each tower, from centre to centre of the columns, is 46 feet.

In the interior of the ring of brickwork, there is another foundation of Portland cement concrete, 28 feet in diameter and 5 feet thick, carrying the chimney-shaft and six water-columns. The water-column base-plates are placed equi-distant on this foundation, and branch into a circular pipe, through which the water passes both into the tank and out of the tank to the fountain. Of these six columns (communicating with the bottom of the tank), five are for the supply of the fountain, and one for the escape of surplus water. The following rough diagram will give some idea of the arrangement:—

The chimney is in the centre, and takes the smoke from the heating apparatus and boilers within the building. The height is 276 feet, the diameter 9 feet 3 inches: thickness, up to the height of 60 feet, 14 inches, after which it is reduced to 9 inches. On the top is an ornamental cap of cast-iron 14 feet in height by 16 feet in diameter.

There are eleven stories in each tower, the height between the floors being 20 feet. Winding round the chimney-shaft is a spiral staircase of iron and wood, containing 404 steps. As a means of additional stability, each tower contains ten diaphragms of wrought-iron, 5 feet wide, weighing about 6 tons. These diaphragms are all fixed between the columns and connecting pieces, and are tied together by iron rods $1\frac{3}{4}$ inch in diameter, and 32 feet in length. The total height of the towers from the first-floor to the top of the tank is 238 feet. There are ten tiers, each tier 20 feet high, making the height of the balcony-floor round the outside of the tank from the first-floor 200 feet. The tanks are 38 feet deep and 47 feet in diameter. Each tank, when full of water, contains 448,000 imperial gallons, or about 2,000 tons. The chimney-shafts go through the centre of the tanks. The total weight on the foundation when the tank is full of water will be,—

Water	2,000	tons.
Wrought-iron	240	,,
Cast-iron	638	,,
Glass, timber, lead, &c.	200	,,
	3,078	,,

Say 3,000 tons.

The pressure on the square inch at the mouth of the jet is 262 lbs. Each tower furnishes but one jet of water, which, on a calm day, will reach the altitude of from 220 to 240 feet. Mains connected with the water towers are laid in the Palace itself, which, in case of fire, could throw a jet of water to the top of the centre transept.

When finished, the towers will be decorated similar to the Palace, in blue and white.

Mr. I. K. Brunel was the engineer; and Mr. J. P. Ashton, of the firm of Fox, Henderson, and Co. the contractors, superintended the erection of the towers.

MONUMENT TO MR. LE SUEUR, AT ST. HELIERS.—The monument to the memory of the late Mr. Constable Le Sueur, is now almost finished. The bronze lions' heads destined, hereafter, we hope, to be issues for the refreshing waters which abound on the heights above the town have been placed on the four *façades* of the pedestal; and the inscriptions on the four panels of the base of the pillar are completed, with the exception of the gilding.—*Jersey Times.*

A TREATISE ON BUILDING BY CONTRACT.

THE prevailing mode of executing nearly all building and engineering works by contract having for some years engaged the attention of the writer, he proposes in the following remarks to take a comparative survey of this system with that which was commonly practised thirty years ago, and previously.

In former days it was customary for a person proposing to build, to consult an architect as to the best methods of carrying out his views, and to employ him to estimate the probable cost in detail, and to prepare such plans and working drawings as should, together with his instructions during personal supervision of the progress of the works, ensure the due execution of the original design, or such modifications of it as might seem to be desirable as the works proceeded. The whole of the works were undertaken by one tradesman, or several were engaged, each in his own particular department of mason, bricklayer, plasterer, carpenter, smith, plumber and glazier, slater, or painter.

On the completion of the works, they were measured off generally by the architect and the several parties directly interested, and it was the duty of the former to send in to his employer detailed bills of quantities (the result of the previous admeasurements), and his own valuation. For these labours the architect was compensated by a commission on the outlay, paid by the employer.

This mode of doing business has the following advantage;—the absence of disposition on the part of those employed to be dishonest, or at least the very slight temptation held out to them to be so; for supposing the tradesman to endeavour to take unfair measure, we must also suppose the architect to be either careless, incompetent, or venal, for such an attempt to succeed; and the author believes that architects, as a body, are too respectable a class of men for this evil to apply to any extent. Still, as architects are but mortal, there may be some amongst them to whom any one, or all three, of these characteristics might be justly applied; but as the cost of works generally is very well understood, and forms a most common topic of conversation amongst those interested in the business, culpable acts of injustice are very apt to ooze out in the gossip of those assisting in the admeasurements; and if the employer suspect any thing wrong, he can employ another surveyor and valuer to go through the works, and to supply him with his separate valuation to test the former. The risk of detection in any flagrant act of carelessness, incompetency, or dishonesty, is therefore great, and hence a considerable check is placed upon each, even where higher motives are not at work. Moreover, let it be always remembered, both by employers and architects, that it is the true interest of the latter to keep down the cost of buildings as low as is compatible with fair remuneration to tradesmen.

Another advantage consists in the ease with which works may be altered in their arrangements, or accelerated in their progress, or be suspended, or altogether stopped, at any period of their creation, without subjecting the proprietor to large claims for compensation for losses entailed upon the contractor in work prepared but not put in, in his workmen being suddenly thrown out of employment, or in materials bought and thrown upon his hands,—all which claims may have some foundation in fact, but more frequently have none. It is true these evils operate to some extent under the old system, but are reduced by the whole works being more under the control of the architect, who can generally anticipate any material departure from the first scheme, and by having the whole works under his own eye, check the undue advancement of one portion over the other; whereas it may occasionally suit the convenience or caprice of a contractor to finish one department entirely before commencing another,—as, for instance, he may prepare the whole of his joiner's work in the shop before laying a single brick, and should any alteration take place in the character of the doors and windows, his claim for work prepared but not used would apply. Under the old system the progress of the several portions of the works

would be balanced as it ought to be, and any such alteration would scarcely affect more than one story or division of a building.

A third advantage occurs in the fact of the builder having no interest in substituting worse material or workmanship, or less quantity than that ordered, because the valuer gives him only its equivalent.

The circumstance of its being to every tradesman's benefit to put in as good work as possible, that it may act as a specimen to invite patronage, constitutes a fourth advantage of no small moment.

The disadvantages of this system of "measure and value" are comparatively small, and may probably be summed up in the following;—The difficulty at times of getting work carried on with due rapidity, arising out of the tradesmen having much on their hands, or from a want of activity on their parts, or, perhaps, some negligence. The two latter causes soon provide their own remedy, for if tradesmen become notoriously negligent or inactive, nobody employs them. The first-mentioned cause no doubt occasionally operates prejudicially to the interests of employers; but whether the much-talked-of superiority of contracts, with conditions to complete by fixed periods under penalties in default, has really an existence, is a very open question.

Secondly,—The liability to high prices, which may be kept up by trade-unions, or by the absence of that stimulus to cheapen labour by method and machinery, which the fact of a minimum profit, or no profit at all, unquestionably supplies to contractors. There is, however, but little danger in trade-unions for such purposes: the real cost of work is too well understood, and the small capitalists will always reduce it to its smallest remunerating amount. Neither is it likely that improvements in machinery, giving promise of solid benefits, will be lost sight of in this mechanical age, though it must be admitted, that without the stimulus referred to, the prejudice in some minds for the old mode of doing work will impede their adoption.

Let us now enter upon a consideration of contracts, with their advantages and disadvantages.

Inasmuch as one man from the possession of capital or plant, from locality, from want of employment, or from talent for business, may be able to afford to do certain work for less money than another man, employers may be consulting their own interest by inviting tenders for the execution of the work proposed, and will have the advantage of knowing, or believing that they know, how much money they are about to expend, and that that sum of money is the lowest for which the work can be properly done.

So long as competitions are governed by the above recited considerations only, and the tenders vary in their amounts only as the one or other of such considerations particularly apply in each case, no harm, or but little, can result; but as there are many parties ready to contract to build anything, who have neither money nor plant, and who are without talent or character, employers may rest assured that in an appeal to the building community, they are asking for tenders from some in whose calculations not one of the foregoing legitimate elements will have a place, except the want of employment. Now, such men must live, and they know their only chance of getting a job is "to put it in as low as possible," that is to say, to send in a tender based upon the very lowest prices at which *any* work coming under the *general* description can be done, or actually involving them in a loss.

It is not to be supposed that these contractors (like the old woman) expect to realise a profit by an extension of their losses. They, no doubt, intend to obtain one by inadequate work, by avoiding the conditions of the contract,—or from extras thereupon. The lists of tenders for divers works, which are occasionally published in the *Builder*, wherein the lowest, and generally the accepted, tender is sometimes about half the amount of the highest (and that where thousands of pounds are concerned), show the recklessness (not to call it by a harsher term) with which contractors rush into heavy liabilities.

It is urged by the friends of the contract system, that irresponsible persons need not be treated with; and, indeed, there is usually inserted, in the advertisement for tenders, a notice that the lowest will not necessarily be accepted; but is it too much to say, that it almost invariably is,—and that such persons are treated with, notwithstanding this published tacit avowal of the employer's knowledge, that he is subjecting himself to tenders of amounts, for which his proposed works cannot be properly done? But employers seem to think, that in publishing a declaration to show no favouritism to the lowest tender, they are driving the adventurers out of the competition, or inducing them to put down such prices as should justify the expectation of a fair execution of the engagement, and they almost invariably accept the lowest tender. It is of little or no use the architect saying he does not approve of the party,—that he will not do the work well,—that he cannot at the price, and so forth. The answer of his patron is generally, "That is not your business, nor mine: the man is willing to engage to do the work for a certain sum, after having been warned in the advertisement, that cheapness was not my sole object. It *is* your business to see that he does it well, and in accordance with the plans and specification: you have drawn up the latter with certain clauses for my security, and I shall expect you to see them carried out." Now, herein the architect is an ill-used man: perhaps, out of a dozen competitors, the lowest is accepted, under his protest, as being incompetent, litigious, or unscrupulous, at a price for which he knows the work cannot be well done; and he is told that he is to see that it is: in other words, that he (the architect), is to do the maximum work for the minimum remuneration; for, be it remembered, the architect is paid by commission. Is this liberal? is it even fair? is it not turning the architect's as well as the builder's necessities to account? The philanthropist should look at the justice of the case—the mere man of the world, at the rational prospect of either architect or builder doing his duty under such circumstances.

The writer does not hesitate to affirm, that contractors are almost daily binding themselves to do work for less than it will cost them, and that they are fully aware of this. What, then, is the consequence? Naturally, that they do not fulfil their engagements according to the acknowledged understanding of them between employers and employed, but either put in inferior materials, or leave them out altogether, where they can without detection. It is utterly impossible for an architect to prevent this. To prevent it effectually, he must stand by the workmen and see everything done: this is out of the question, but recourse is sometimes had to a deputy in the shape of a clerk of the works, whose duty it is to see all the conditions of the specification carried out in their integrity. However honest, active, and intelligent this functionary may be, mal-practices on the part of the contractor will be successfully carried out if there is a disposition to adopt them. Superintendents of police have had their pockets picked, although they knew they were in bad company. The best guarantee against dishonesty is the absence of temptation to commit it.

Constantly at war with the contractor, the clerk of the works soon gets into disfavour with the workmen, who, having executed work according to their master's orders, do not like to have it pulled down or found fault with; and his position is one requiring great moral courage, patience, forbearance, and intelligence, and is, consequently, one demanding high wages. Now, if the salary paid to him be added to the amount of the contract, it will be found, probably, that the great saving which held out its allurements, in the sum total of the tender, has broken faith with the employer, and that which should have been spent as the price of *good* work has been swallowed up in expenses incidental to *bad*.

If a builder undertake to do for 900*l.* work which he knows should cost him 1,000*l.* he either does not look to his business as a source of income, or he intends to obtain profit by some dishonesty in the execution of his contract.

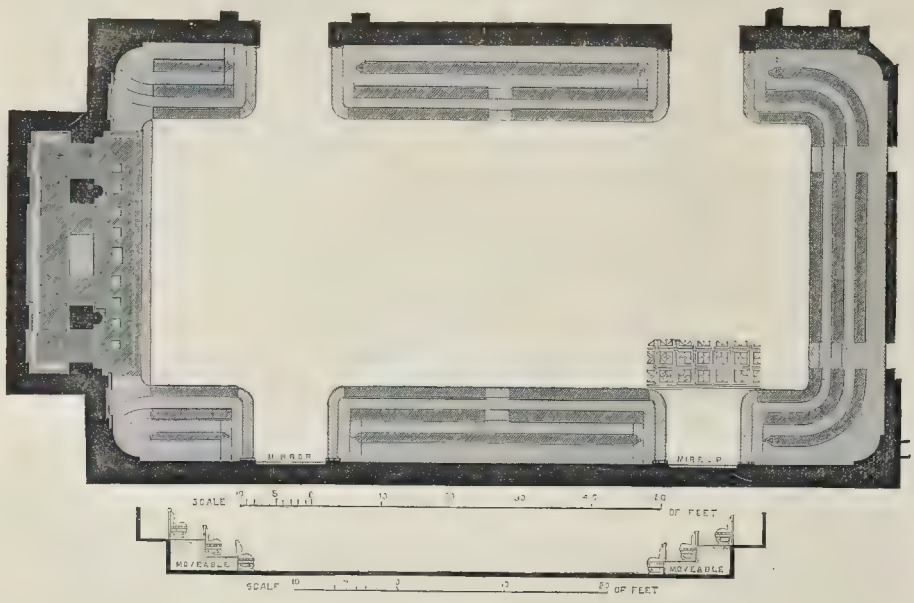
An employer may say, "I have nothing to do with this; I will take care, by means of stringent clauses and clerks of the works, that he does not cheat me, and whether he will lose by the job or not is not my business." Mr. Employer, it is your business: you either quietly arrange to involve in a serious loss, an honest man (supposing for the sake of argument the contractor to be one), or (adopting the supposition that he is not), by entering into such a contract with him, and taking care that he shall not impose upon you, you are an accessory before the fact to his robbing somebody else. "Honour among thieves" will scarcely avail you anything in the latter case,—for he will infallibly rob you notwithstanding all your care-taking. But you can go to law with him and obtain damages. Of course you can; but taxed costs will not cover your expenses, and their excess will add something to your intended outlay, perhaps rather more than would have made up the difference between your contract sum and a fair measure and value price of good work.*

GRADUS.

PRIZES TO THE METROPOLITAN SCHOOLS OF ART.

LORD STANLEY of Alderley, as President of the Board of Trade, distributed the prizes to the students of the Metropolitan Schools of Art on Saturday, the 24th, at Marlborough House. In the course of his observations he announced that it had been determined to hold, in the year 1858, an exhibition of those works of ornamental art produced since the establishment of the Schools of Art, as articles of commerce, which, either in their original design, or in their execution, have been carried out by those who have derived instruction from the schools. The works would consist of carvings in all materials, furniture, metal-working, pottery, &c. He also spoke of the other important measure, for promoting the extension of art instruction, to which we have already alluded. Instead of limiting the award of prizes to students taught in the Schools of Art, the Department would hereafter hold examinations at which any person might present himself to be examined in freehand and mechanical drawing.

We were glad to observe the number of female students who have been successful competitors. It is earnestly to be hoped that the special classes of wood engravings, porcelain painting, and others, in which female students have proved themselves so successful, will open a legitimate field of labour to a large number of young ladies, who would otherwise be at a loss to obtain an honourable livelihood.



A large number of medals were also awarded to the male students. It is doubtful whether this extremely liberal distribution is calculated to stimulate the students, inasmuch as obtaining a medal seems such an easy matter that more than ordinary care and exertion is not required. The Board of Trade seem to have felt this, and to have wished for some higher prize than the present bronze medal, which should be the reward of greater excellence than that displayed in the regular class drawings. To effect this, the Board have selected four English sculptors (amongst whom is the modelling master at Marlborough House, Mr. Hancock) to make designs for two medals,—one to be the prize in *local* competition amongst the students of each school, the other to be awarded in a *general* competition of the successful works in the local competitions.

THE NEW STATE ROOMS AT BUCKINGHAM PALACE.

THE new state rooms on the south side of Buckingham Palace now completed, were constructed by the late Mr. Thomas Cubitt from the designs and under the superintendence of Mr. James Pennethorne, architect. They include a ball and concert room, a large supper-room, and a promenade gallery, with ante-room and approaches. The sculptures which adorn them are the work of Mr. W. Theed, and the decorations have been carried out under the direction of Mr. Lewis Gruner, in conjunction with the architect. The character of the decorations is

* To be continued.

THE BALL AND CONCERT ROOM AT BUCKINGHAM PALACE.

Plan and Section

that known as Cinque-cento,—the style which prevailed in Italy, contradictory, as it sounds, in the sixteenth century.

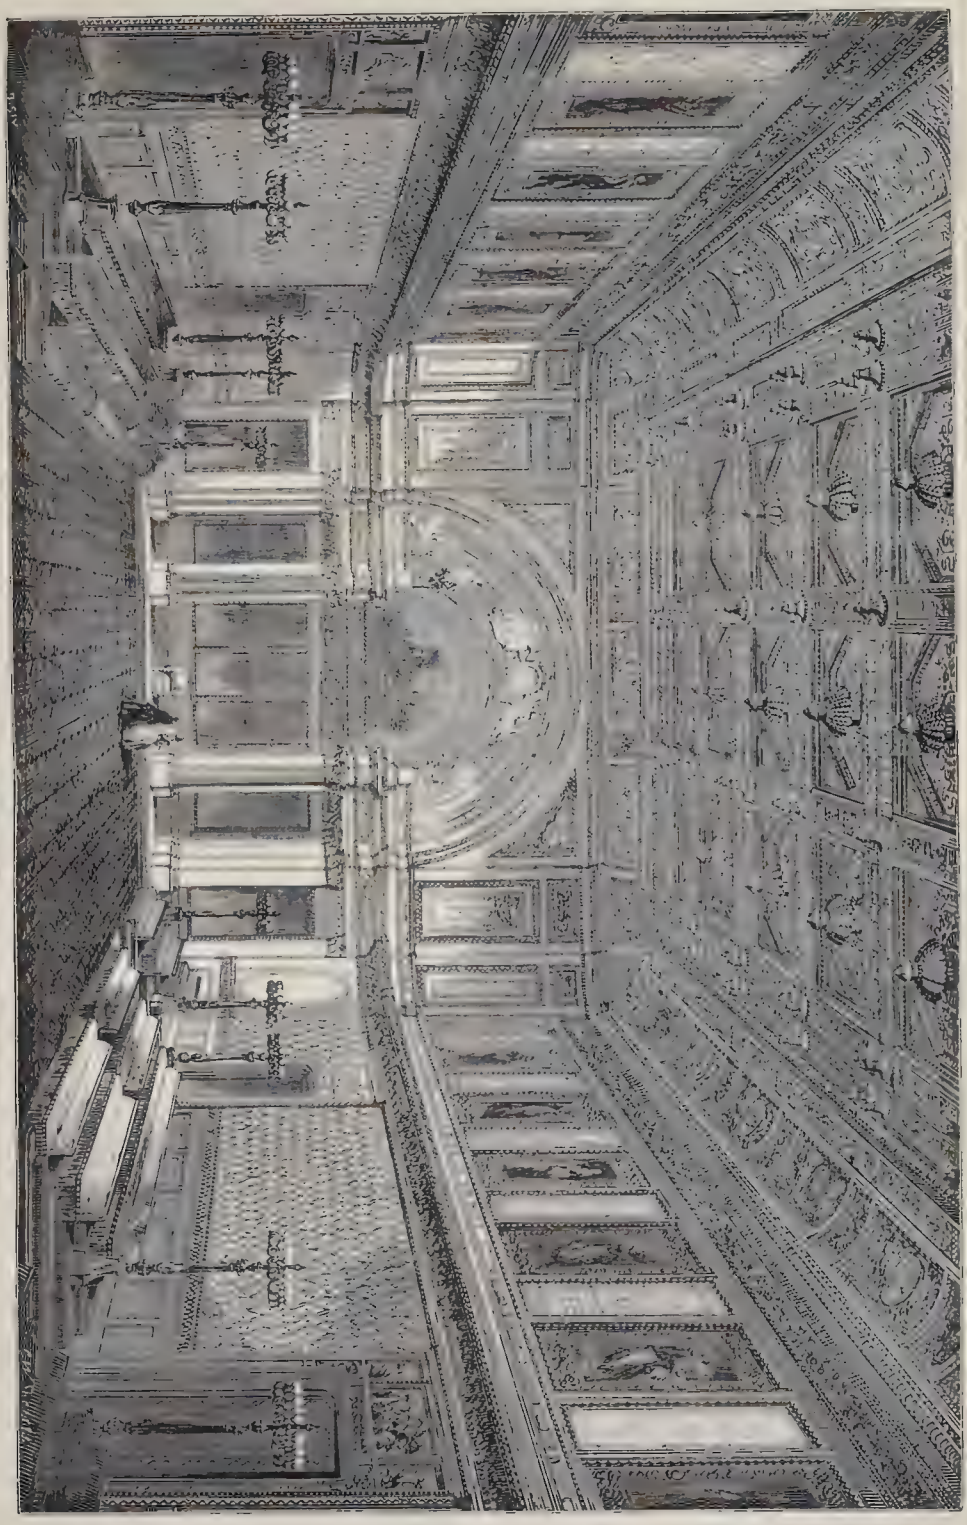
We give a view of the ball and concert room. This is a very fine rectangular apartment, 110 feet long, without the two recesses, at the east and west ends, 60 feet wide, and 45 feet high; including the recesses, the length is 135 feet. At the end towards the west a bold arch, supported by Corinthian columns, and surmounted by emblematical figures of Fame holding a medallion, upon which are the profiles of the Queen and Prince, rises above Her Majesty's seat, as shown in our engraving. The lunette formed by this arch will ultimately be filled with a copy from Raffaelle's Parnassus; it is at present decorated with an allegorical composition, representing "Britannia sanctioning Peace," exemplified by children with branches of olive, while a rising lion indicates the watchfulness and the strength of the nation. At the opposite end another arch, but without enrichments, confines a similar recess, containing the orchestra and a richly, but not very successfully decorated organ. At the foot of this and along the two sides of the room a triple row of seats, covered with red silk, and having a passage way behind, extends, which seats, with the other furniture of the apartments were furnished by Messrs. Johnstone and Jeanes. The roof of the ball-room rests on a wide cove enriched with stuccoes; double beams of considerable projection running parallel and transverse divide the whole roof into twenty-one compartments, each of which is shaped into a deep octagon recess, from which descends a glass burner for gas. The lustres are the work of Messrs. Osler, of Birmingham. Below the cove a cornice and frieze richly ornamented in stucco separate the walls from the ceiling. The upper part of each of the two side walls is divided into thirteen compartments, seven of which are the windows, which at night are filled with gaslights from behind, and six are surrounded with large borders, and represent figures of the Hours, taken from sketches by Raffaelle, and executed above life-size by Professor N. Canzoni, at Rome, where the originals are existing. Within similar spaces at the sides of the arches at the ends of the room, the arms of Great Britain are suspended from flower and fruit knots. Arabesques on gold ground and marbled panels fill the other spaces in the corners, while the four spandrils formed by the arches contain four Cupids from Raffaelle's frescoes at the Farnese Palace. The whole of the length of the lower part of the two side walls is covered with a rich silk, decorated with the national devices in flowers, and executed by Messrs. Jackson and Graham. On the north side of this apartment are two large doors with sculptures by Mr. Theed, of which the one leads from the Promenade-gallery, and the other opens into a similar room called the Approach-gallery, and through which the State dining-room of the palace is reached. Opposite to each of these doors, in the ball-room and concert-room, a mirror of large size, viz. 10 feet by 15 feet, has been placed to correspond with the doors. The ten candelabra of gilt bronze which are placed at the two sides of the seats of her Majesty and the royal family, and at the sides of each of the doors and mirrors, as also the two lustres in the recess on the west end, have been executed by Messrs. Barbedienne and Co. Each of these candelabra supports forty-three wax candles.

The floor is formed in solid parquetry, of wainscot, satin wood, and mahogany. The seats, we should mention, are not fixtures; so that in the event of using the apartment as a Banqueting Hall, they can be taken away, leaving only the raised footway next the wall, to serve as a sideboard for the service.

All the stucco enrichments are beautifully drawn, and with the general arrangement, reflect the greatest credit on Mr. Pennethorne. The Promenade-gallery is 95 feet in length and 31 in height, with a coved roof, from which the apartment receives its light.

The lower part represents an open gallery with vases filled with flowers under its arches; above these a series of panels has been introduced with chiaroscuro paintings of children. Eight busts, by Mr. Theed, are placed along the walls on marble columns.

The Approach-gallery has its walls painted in imitation of tapestry, divided by pilasters, with scrolls, and the two ends have large reliefs, representing the birth of Venus, and Venus descending with the armour for Achilles, in life size.



The Supper-room, the last apartment we have to speak of, is not far from a square, being 60 feet one way, and 70 feet the other, and is 45 feet high to the top of the dome. A large blue velarium, sown with golden stars, and bordered by cords and arabesques, extends over the whole of the dome, and it is painted as if the sky were seen beyond, between the cords which tie it down at the foot, and some birds are shown as having entered!

The walls of the upper part of the room are divided into panels alternately painted with arabesques in colour, upon a red ground, and with the royal arms in chiaroscuro on a gold ground, each panel being surrounded by a rich frame. The north and south sides contain a frieze in relief, each divided into one large and two small compositions, of which the principal ones are taken from Raffaelle's "History of Psyche," to which Mr. Gibson, the Royal Academician, has made some additions, the whole having been modelled and executed by Mr. Theed.

In the lower part Mr. Moxon has executed a variety of panels of various coloured marbles, as he has also executed all the other marbles and gilding in the whole building; and we bear willing testimony to the admirable manner in which the imitations are executed.

Many will doubtless find cause for regret that here, at the head-quarters of taste, intelligence, fashion, and wealth, the principle of truthfulness even in decoration has not been adhered to to a greater extent than is apparent: but we need not now discuss the question.

Let us add in conclusion, as affording a useful hint, that in order to study the effect of various combinations of colour, and to determine on the decorations to be adopted, careful drawings in outline of the sides and ceilings of the various apartments were lithographed, so as to afford any number of copies for experiments.

THE BALL AND CONCERT ROOM AT BUCKINGHAM PALACE.—Mr. Jones Pennethorne, Architect.

CHURCH-BUILDING NEWS.

Peterborough.—The erection of the new church of St. Mark, on the Lincoln road, under the superintendence of Messrs. Ellis and Son, is progressing. The site was presented by the Ecclesiastical Commissioners. The edifice is in the Gothic style of fourteenth century, and will accommodate about 800 persons, free. Upwards of 2,800*l.* including 1,000*l.* from the Bishop and 300*l.* by his son, the vicar of Peterborough, have already been guaranteed; but to complete the tower and spire, fence the ground, provide organ, bells, &c. about 700*l.* more will be required.

Ipswich.—The foundation-stone of a new church was laid last week at California, a remote suburb. The church will be in the Perpendicular style, and built of rubble with stone dressings. In plan it will comprise a nave, transepts, and chancel, the latter of apse form. The roof, of lofty pitch, will rise direct from the side-walls of the building. The structure will furnish about 350 sittings, mostly free. Mr. Woolnough is the architect, and Mr. Plumstead the builder.

Braintree.—The restoration of Braintree church is to be forthwith commenced, although the funds fall far short of the required amount, about 1,200*l.* only having been as yet secured, including 200*l.* from the Incorporated Society.

Brentwood (Essex).—The church in this town, erected about twenty years ago, being too small for the increasing population, has rendered an enlargement necessary; and this is to be effected by erecting a new chancel and chancel-aisle, which will occupy the extremity of the site, east of the church. The aisles will be gabled north and south, and thus the difficulty got over of adding to the wide span and roof of the present church. The walls will be of rag, with Bath stone dressings; the roofs, waggon-headed, with the main timbers showing. The arches opening into the chancel and nave will be divided by parclose screens, and the stall seats will be open and of massive construction. The floor is to be laid with tiles. A memorial east window is already in Mr. Ward's hands, and two others of painted glass are expected. Mr. Joseph Clarke, of London, is the architect.

North Kilworth (Leicestershire).—The interesting Early English chancel of this church is being entirely restored and re-seated, with a new roof, &c. The works are being carried out by Messrs. Law, of Lutterworth, under the direction of the architect employed at the Brentwood church. The east window will be painted by Mr. Holland, of Warwick, as a memorial to the rector's family. The doing away with the old square seats, the removal of a fire-place and a tall-brick chimney, the unstopping and restoration of the windows and chancel arch, and the removal of the present flat roof and ceiling, are amongst the works. The plastering is to be done in party colour.

Wardle (Rochester).—The foundation-stone of a new church for the village of Wardle was laid on Friday in week before last. Mr. G. Shaw is the architect. The style of the architecture is Early English. The building will consist of a chancel, nave, two side aisles, vestry, and organ-room, tower and spire, the latter occupying the south-west angle of the church. The roofs will be open-timbered, supported on columns, with clerestory. There will be no galleries. The accommodation will be for 500 persons, and the estimated cost, including architect's commission, warming apparatus, and other minor matters, is about 2,500*l.* It is expected to be finished about next May. The contractor is Mr. E. Taylor.

Tunbridge Wells.—On the 9th inst. an influential public meeting was held at the Town Hall, Tunbridge Wells, to consider a proposal for the erection of a new church in the town.

Weymouth.—A new tower, with peal of bells, are proposed to be added to St. Mary's church here. The design for the tower has been prepared by Mr. Pierse Arthur.

Wimborne.—The building of the new choir at the Minster is progressing. The organ is being reconstructed with modern improvements by Mr. F. S. Blount.

Malmesbury.—On the 8th inst. Garsdon Church was reopened, having been rebuilt at considerable cost. The new church is in the perpendicular style, with open stained roof, and uniform sittings for rich and poor. The builder was Mr. Chapman, of Frome. The operative mason was Mr. Francis Bowman, of Malmesbury. The architects were Messrs. Coe and Goodwin. There is a balance of 200*l.* due to the builder yet to be made up.

Tenbury.—Greet church has been restored and re-opened. Mr. Cranston, of Birmingham, was the architect employed, and Mr. G. Smith, of Tenbury, the builder.

Godmanchester.—It is in contemplation to put up a memorial window in the chancel of the church here, in token of respect to its former vicar, the late Rev. Charles Gray. It is calculated at a cost of 400*l.* The Dean and Chapter of Westminster have given 50*l.*; and the subscriptions already amount to nearly 200*l.*

Bath.—Some time since the citizens of Bath resolved to erect a monument in the Abbey Cemetery, as a memorial of the officers and private soldiers connected with the city who fell during the late war. The monument, of which Mr. S. Rogers, of Widcombe, is the sculptor, will be nearly twenty feet high, according to the local *Chronicle*. Its material is the finest pennant. "The design was derived from Père la Chaise." It is in the form of an obelisk, with wreaths on the faces. On the sides of the pediment will be engraved the inscriptions.

Prees.—The consecration of the new church at Fauls, an outlying district of Prees parish, in Shropshire, took place on Tuesday before last, according to the *Shrewsbury Chronicle*. Viscount Hill gave the site and the bricks, and the parsonage, now in the course of erection near the church. The church is in the pointed style of fifteenth century. It consists in plan of a simple parallelogram, 54 feet long by 17 feet wide inside, and, with the gallery at the west end, is capable of holding between 150 and 200 persons. It is almost wholly constructed of bricks. The dressings of the windows and details are of Grinshill stone, and various devices are worked in black and red brick on the face of the walls. At the junction of the body of the church and chancel, is a small open-timbered bell-turret. The roof is covered with Staffordshire red and blue tiles, of varied patterns. The interior is fitted up with open seats. The east window is to be of stained glass, representing the Crucifixion. The western window is in the wheel fashion, variegated with tracery. The architect was Mr. Ferrey, and Messrs. Nevett, of Ironbridge, were the builders. The cost was about 700*l.*

Uffington.—The church of Holy Trinity, Uffington, near Shrewsbury, was consecrated on Wednesday in last week. The new church consists of a nave and north aisle, 43 feet by 27 feet, separated by an arcade of stone-work; a chancel 21 feet by 18 feet, and two chancel aisles 11 feet by 9½ feet each. The style is Early English. The walls are of white Grinshill stone. The roof is of oak. The windows on the south of the nave are arranged in single and coupled lancets. The north aisle has also coupled lancets; the organ aisle having tripled lights cusped, and the old Norman loops. The east-end has a wheel window, surmounting three single lancets. The floor is of encaustic quarries, laid on hollow chambers, damp proof, and capable of being filled with hot air. This mode of warming renders unnecessary all wood flooring. The east and south windows of the chancel, the eastern and western windows of the south aisle, and the western lancet, have been filled with stained glass by Mr. Evans, of Shrewsbury. The remaining windows have been glazed in cathedral glass, varied in shade, each light being charged with one or more roundels or squares, containing scriptural subjects,—this being part of the collection of foreign glass left by the late Rev. W. G. Rowland to Mr. Corbet, of Belmont. The squares on the south side were obtained from the Abbey of Einsiedlen, Switzerland: the roundels were from Belgium. The architect, from whose designs the edifice has been erected, is Mr. Samuel Pountney Smith, of Shrewsbury. Mr. Ralphs, of Uffington, has carried out the woodwork, and acted as clerk of works; and Mr. Smith, of Grinshill, erected the masonry. The whole of the timber has been supplied from the Sundorne estate.

Wrexham.—The tender of Mr. Ebenezer Thomas, of Menai bridge, for the new Church of St. Mark, to be erected at Wrexham, has, according to the *Wrexhamite*, a local paper, been accepted. The amount of the tender was 4,561*l.* Mr. Thomas was the contractor for Gwersyllt Church. The successful competitor for the design of St. Marks was Mr. R. Kyrke Penson. The edifice is to be ready by 25th April, 1858. The requisite funds have not yet been fully subscribed.

Walsall.—The foundation stone of a Parsonage, in connection with the Church of St. James, at Ogley Hay, was laid on Monday before last. The architect of the Parsonage-house (which is in accordance with the style of the church) is Mr. G. T. Robinson, of Leamington; the builders, Messrs. Hardwick, of Birmingham, who also built the church.

Rainhill (Liverpool).—The new Chapel at Rainhill County Lunatic Asylum has just been completed. It stands at some little distance from the Asylum, at the north-east corner of the grounds. Mr. H. P. Horner, of Liverpool, was the architect. His instructions were to provide accommodation for a congregation of 350, but "with a view to future enlargement and strict economy of cost." The style is the late geometrical. The edifice consists of a nave, south aisle, south porch, belfry, and turret-spire, at the north-west angle, a small waiting or resting room for patients adjoining the turret, vestry near the north-east angle, and organ aisle on the south-east. The lower portion of the turret forms a north-west porch. The nave and aisle are separated by a series of six arches of dressed stone on octagonal stone piers. The roofs are open-timbered of simple carpentry, curved ribs over the communion space and champers on the angles being the only approaches to decoration. The wood is slightly stained and varnished. The timbers of the roof rest on the plain stone corbels in the nave and aisle, and a hexagonal ventilating louvre, surmounted by a spire-roof and vane, rises from the roof near the east end of the nave. The east window of three lights is fitted with stained glass, by Messrs. Pilkington, of St. Helen's, from a design by Mr. Horner. A diaper pattern, intermixed with bands inscribed with appropriate texts, fills the body of the lights, and the heads have symbolic letters, combined with foliage. A small quatrefoil light in the gable is also filled with stained glass. The west window is of four lights, this and the east having moulded internal jambs. The seats are open, excepting those for the choir and officers; the whole, except those obtained from the old chapel, being of varnished deal. The turret spire, with a light gilt cross which crowns it, is sixty-four feet in height: the other principal dimensions are as follow:—

	Ft.	In.
Extreme internal length	68	0
Length of aisle	73	0
Length of organ aisle	15	0
Width of nave	22	0
Width of aisle	13	0
Total outside breadth	42	0
Height of nave roof to ridge	37	0
Height of aisle roof	18	9

The building is of stone, furnished by a quarry on the site, and from which the asylum was built, the materials of the original chapel being also used in the new one. The external stone-work is of "Cumberland walling," with dressed quoins, jambs, &c. The contractor for the whole was Mr. H. Fisher, of Birkenhead. The amount of the contract was 1,283*l.*

Chorley.—The Chorley Improvement Commissioners have purchased the land for the cemetery for upwards of 3,120*l.* and have let the contract for the erection of the three cemetery chapels to Mr. Thomas Banks, of Chorley, joiner and builder. The chapels will be of the following dimensions;—Church of England, 32 feet by 18 feet; Dissenters', 24 feet by 24 feet; and Roman Catholic, 32 feet by 18 feet.

East Keswick.—On Saturday in week before last the foundation-stone of a new church was laid at East Keswick, in the parish of Harewood. The site, which is in the centre of the village, has been given by the Earl of Harewood, and com-

prises two roods twenty-three perches. The building will consist of a nave, chancel, porch, and vestry; the whole surmounted with a small spire. It will accommodate about 300 people, and the works, which are let to Mr. Hall, of Leeds, are expected to be completed about the end of the year. Messrs. Mallinson and Healy, of Halifax, are the architects. The building will be in the Early English style.

Carlisle.—A new Wesleyan chapel has been erected at Hallbankgate. Mr. Beattie, of Brampton, was the architect. The building, according to the *Carlisle Journal*, is in the Early English style, and is 42 feet 6 inches long by 32 feet 4 inches wide; height to ridge, 32 feet 6 inches, and will seat 200 persons. It stands on elevated ground.

PROVINCIAL NEWS.

Chelmsford.—The tender of Mr. S. Simpson, of Ipswich, for the erection of the new Corn Exchange here, at the sum of 4,923*l.* was accepted, there being four other tenders, of which the highest amounted to 6,450*l.* and the lowest to 5,697*l.*

Great Pandon, Essex.—The interior restoration of this little church, with a late transept added by Sir Josiah Childs, the eminent banker, soon after 1600, is now being completed, under the direction of Mr. Joseph Clarke, architect. The old seats in the nave will be restored, and followed throughout the nave; whilst in the chancel the stall seats will be of a richer character. The same architect is carrying out a village club-house: the walls will be of coloured brick, with a high open roof, and accommodation for reading, with a supply of tea and coffee from a bar at the end. Attached will be a smoking-shed, and every inducement to attract the labourer from the beer-shop.

Oxford.—A model of the public fountain proposed to be erected in St. Giles's, was exhibited in the Public Library, used as a withdrawing-room at the civic banquet. From the designs, it appears that the fountain would be 50 feet high and 50 feet wide at the base, with a jet over all of 50 feet, making the total height, when playing, 100 feet. The uniformity of the stem is broken by two smaller basins, the water of the main jet falling into them in succession before reaching the largest. Surrounding the latter, it is proposed to have seven sculptured figures representing Great Britain, France, Turkey, Sardinia, Austria, Prussia, and Russia, each emblematical of the peace, and throwing a jet of water. The name of the originator of this design and model did not transpire.

Liverpool.—The surveyor of the Liverpool Dock Trustees has reported that the connection between the lines of railways belonging to the trustees, at the north end of the Sandon dock, and the high lines of railway communicating with the Lancashire and Yorkshire and the London and North-Western Railways, are completed, and that a circuit by rail is now complete on the dock quays.

Manchester.—The front of the new Free Trade-hall, in Peter-street, has just had a piece of allegorical sculpture placed in the circular head of each of its nine windows. The centre piece represents free trade, with outstretched arms and open hands. On her right hand Europe is seated, followed by Asia, with the arts and manufacturers. On her left are Africa and America, with agriculture and commerce. All the work is in bold relief. In each case a single figure represents the allegory; but to each are added the various emblems, &c. which help to render intelligible the idea of the artist. The attitudes and draperies of the nine female figures are so disposed as to produce varied effects. The sculptures have been executed by Mr. Thomas, of London.

Blackpool.—The building of a school, in Bank Hey-street, for infant children, was commenced on Tuesday before last. The building is to consist of a school-room and mistress's house, with rooms for pupil teachers, after a plan prepared by the architect of the council on education. A large play-ground is to be attached to the school. The estimated cost is 682*l.* Mr. Thomas Topping has contracted for the whole building, under the superintendence of Messrs. Myres and Veevers, of Preston. Upwards of 200*l.* says the *Preston Guardian*, are still required to complete the undertaking, in addition to the amount promised.

Sunderland.—The erection of the new Sailors' Home has been let, says the *Shields Gazette*, to Mr. Alexander Thompson, of the firm of Thompson and Hunter, and will be commenced immediately, so as to be ready for habitation by November term. The building embraces two large rooms for the use of the Marine Board, with other smaller rooms. The Home embraces a spacious dining-hall, one large front sitting-room and library, and one large smoking and sitting-room. There are also about forty small bedrooms, intended each for two shipmates, with separate beds; while contiguous to these will be the baths and washing-rooms, with all the other necessary appliances for carrying out the objects of a sailors' home.

LIGHTNING AND CONDUCTORS.

THE following notes, made whilst going through M. Arago's "Meteorological Essays," lately published by Baron Humboldt, may not be uninteresting to some of your readers.

J. D. J.

"The celebrated Duhamel du Monceau says, that lightning, unaccompanied by thunder, wind, or rain, has the property of breaking oat-stalks. The farmers are acquainted with this effect, and say, that the lightning breaks down the oats."

NOTE.—This is a well-received opinion, I know, with the farmers in Devonshire. It may amuse our country members to inquire into the extent of this belief.

"In thunder weather the barking of oak-trees is said to be effected with less difficulty than when the day is fine, the wind in the north, and the sky clear."

Bodies shattered by Lightning.

"The hypothesis entertained on this subject is, that lightning by its action developes, in the substances which it traverses, an *eminently elastic fluid*, the tension of which must inevitably act in all directions. Would it be a very hazardous supposition if we were to assume the elastic fluid in question, to be no other than the vapour of water?" *i.e.* that the tension we have spoken of is the *force of steam.*

"Lightning, as we have seen, fuses thin metallic wires. May we not conclude, also, that it will render incandescent the minute aqueous particles which it may find in its passage?

"What force would water not have at the much higher temperature of red-hot iron? Such a force would evidently be adequate, in point of intensity, to all we know of the mechanical action of lightning."

"Suppose humidity in the fissures or small cavities of a block of freestone; and if struck by lightning the steam developed will shatter the stone to pieces, and the fragments will be projected to a distance in every direction."

Effects of Lightning on Animals.

"In the summer of 1774, lightning struck two persons who were under a tree: portions of their hair were thrown to the top of the tree."

"A workman was struck in a tavern: portions of his hat were found incrusted in the ceiling."

NOTE.—This of course is caused by what is termed the "up stroke" of lightning. Two years ago in this neighbourhood [Worcester], a hay trusser left his rick on the approach of a storm. Lightning struck the tree and the man: it split the bark of the former and destroyed the man: his shoes were burnt and much of his clothing, portions of which were driven up into the tree.

A Hint to the Ladies.

"A lady was putting out her hand to close a window during a thunder storm: the lightning darted, and a gold bracelet which she wore disappeared altogether, so that no vestige of it was found: she herself received only some slight hurts."

"When lightning falls on men or animals, ranged either in a straight line or in an open curve, it is at *the two extremities of the line* that its effects are, generally speaking, most intense and disastrous."

"This has been exemplified where lightning struck a stable in which were ranged thirty-two horses, when the two outside horses were killed! When lightning encounters an iron bar, it is only on entering and quitting it that it does much damage."

Precautions against Lightning.

"Franklin recommends persons to avoid the neighbourhood of fire-places. Lightning does, indeed, often enter by the chimney, on account of the internal coating of soot which is one of the bodies for which, as for metals, it evinces a preference."

"For the same reason, avoid as much as possible metals, gildings, and mirrors, on account of their quicksilver."

The best place is in the middle of the room; unless, indeed, there should be a lamp or chandelier hanging from the ceiling.

"The less the contact with the walls or the floor, the less the danger. A hammock, suspended by silk cords, in the middle of a large room, would be the safest place."

"In the absence of the means of suspension, the next best place is on substances which are bad conductors, such as glass, pitch, or several mattrasses."

"These precautions must be supposed to diminish the danger, but they do not altogether remove it."

"There have been instances of glass, pitch, and several thicknesses of mattresses being traversed by lightning."

"It should also be understood, that if the lightning does not find round the room a *continuity of metal*, which it may follow, it may dart from one point to another diametrically opposite, and thus encounter persons in the middle of the room, even if they were suspended in hammocks."

"The greater the mass and the volume of the conducting matter brought together in one place, the greater the chance of being struck by lightning in its neighbourhood.

"There is another cause which may contribute to render numerous assemblages of men or animals dangerous during thunder-storms.

"Their *perspiration* cannot fail to occasion an ascending column of vapours, and it is well known that moist air is a better conductor of lightning than dry air: such a column has a natural tendency to attract the lightning, by preference, to the place whence it proceeds. Need we, therefore, be surprised that flocks of sheep are so often struck by lightning, and that a single stroke should sometimes cause the death of thirty, forty, or even fifty of these animals."

Is the danger of being struck by lightning increased by running, or by rapid motion, during a storm?

"The rapid motion of any body leaves behind him or it a space, in which, mathematically speaking, the air is comparatively rarified. All other circumstances being equal, lightning will be more likely to strike such space."

NOTE.—Hence, ride for your life in a storm.

Lightning Conductors.

"All other circumstances being equal, lightning directs itself, generally speaking, to the *most elevated* portion of edifices."

"All other circumstances being equal, lightning directs itself, by preference, to *metals*. When, therefore, a metallic mass occupies *the most elevated* point of a house, we may feel pretty nearly certain that lightning, if it falls, will strike that point."

"Lightning, which has entered a metallic mass, does mischief to the surrounding masses at *the moment when it quits the metal, and at the vicinity of the point or points at which it issues from it.* A house, therefore, may be rendered safe from its highest point to its foundation, *if the metallic parts of the roof are prolonged without interruption to the ground.*"

"When there are upon the roof or summit of an edifice several distinct metallic masses *completely separated from each other*, it is difficult, and even impossible, to say which of them will be struck by preference. The only safe practice is to unite all these various metallic masses by rods of iron or copper, or bends of lead, zinc, &c. so that there may not be any one of them which shall not be in *metallic communication* with the bar which is destined to transmit the lightning to the damp earth, and which runs down one of the upright walls of the building."

"*Damp earth* offers to the fulminating matter which is passing along a bar a channel, by which it escapes easily, and *without detonation* or damage, provided the *bar plunges a little deeply into the earth*."

"By a proper conductor, I mean, on the one hand, that it should go into the ground until it reaches *earth, which is always damp;* and on the other, that it should be *sufficiently massive* to transmit the strongest lightning without being fused by it."

"A pointed rod is much more effective than a blunt one."

"In order to protect an extensive building, it would be necessary to arm it with several lightning-conductors, and the *less the length of the rods, the more they must be multiplied.*

"In certain cases, *oblique* rods may do good service.

"Platinum points are to be preferred to copper ones, not only on account of their unalterability under the action of water or air, but also on account of their *infusibility.*

"The conductors should be preserved from rust by a coat of paint.

"When the conducting bar enters the ground, there is an alternative between two opposite difficulties.

"If the soil is *humid*, the fulminating matter passes off easily; but the metal *rusts and is soon destroyed.*

"If the soil is *dry*, the bar lasts a long time; but it fulfils its function very badly. It was, therefore very desirable to discover some substance which should be a good conductor, but which should not injure iron. *Charcoal, when it has passed through a red heat, is of this description.*

"In passing the eaves and cornices, the conducting bar is sometimes bent into a right angle, and sometimes into an acute angle. Such *inflections become dangerous:* care should be taken to make the necessary changes of direction by *gentle curves.*

"We do not learn either from the Bible or Josephus, that the Temple at Jerusalem was ever struck by lightning, during an interval of more than a thousand years, from the time of Solomon to the year 70, although, from its situation, it was completely exposed to the violent thunderstorms of Palestine.

"By a fortuitous (?) circumstance, the Temple was crowned with lightning conductors quite similar to those which we now employ, and which we owe to Franklin's discovery.

"The roof, constructed in what we now call the Italian manner, and covered with boards of cedar, having a thick coating of gold, was garnished, from end to end, with long pointed and gilt iron or steel lances, which Josephus said were intended to prevent birds from resting on the roof, and soiling it.

"The walls also were overlaid, throughout their extent, with wood thickly gilt. Lastly, there were, in the courts of the Temple, cisterns into which the rain from the roof was conducted by *metallic pipes.* We have here both the lightning-rods and a supply of means of conduction so abundant, that Lichtenbergh is quite right in saying that many of our present apparatuses are far from offering in their construction so satisfactory a combination of circumstances."

A STROKE OF LIGHTNING AT BROMPTON.

As a practical illustration of the necessity of attending to the teachings of science to prevent evil from the presence of that powerful agent, electricity,—an agent always and everywhere at work,—we may mention what occurred at Mr. Rymill's, house, Brompton-crescent, on the 17th inst. It was raining while the family were dining, and Mr. Rymill sent his servant downstairs to take out a bell-trap close to the front of the house, that the water might get away. He had opened the lower door, and was about to stoop to do so, when the maid-servant called to him that she had already removed it. That call saved his life: an electric flash descended diagonally past the front of the house to the spot he would have occupied: as it was, he was struck down and remained insensible for a considerable time. The fluid seized upon the copper bell-wire, which it fused wherever a brass crank occurred to break the connection, leaving marks of the explosions on the wall, and in one case it fused part of the crank itself. It passed through a small hole in the front wall, along the wire, into the house, to the extent of 3 or 4 feet, and then, meeting the bell-spring, appears to have returned in preference along the copper wire to the outside, where the wire was inclosed in a zinc tube up to the garden-gate, up which it ran to a distance of about 45 feet, where, first again fusing the wire at its junction with a crank, it passed away. Mr. Rymill has reason to be thankful.

THE EMPEROR OF THE FRENCH AND MODEL LODGING-HOUSES.

The emperor, anxious for the well-being of the working classes of Paris, has caused to be announced in the *Moniteur*, that he has, at his own cost and risk, undertaken the construction, on a grand scale, of model lodging-houses, for which purpose he has caused 18,000 metres of land to be bought on the Boulevard Mazas. The *Labourers' Friend*, in mentioning this, says,—"The necessary and happy consequences of all prudent and well-considered enterprises is gain; and, as no enterprise can be more prudent than to supply a pressing and daily increasing demand, there can be little doubt that these lodging-houses, when finished, will leave a large profit upon the capital invested in them, for the home accommodation for the poor is at present very inadequate to their wants; but, as if to meet in advance all possible suspicion of self-interest in this generous undertaking, it is expressly stated that "so soon as the letting is completed, the lots will be granted, at cost price (*au prix de revient*), to such persons as will undertake to build within the term fixed upon, and according to a given plan."

EXPERIMENTAL ARCHITECTURE IN AMERICA.

Our readers may be glad to hear what is being said about architecture in America. The following is from the *Transcript*:—

The first thing that strikes a stranger in Boston is its admirable commercial buildings. An Englishman, for instance, must be surprised at our light, airy, yet substantial warehouses, compared with the cavernous, ill-ventilated, yet often flimsy structures, in which business is transacted in London.

In other parts of our city, perhaps the most striking fact is the absence of uniformity. It is evident that we are studying architecture in the way that we are studying everything else,—experimentally. The book architect says, 'You musn't use this or that feature: it's contrary to the rules of the pure Greek, or the pure Gothic, or the pure Renaissance.' 'Pure fiddlestick,' says the Yankee: 'you say that won't do, I'll try and see. You say that design there is meant for a base: now I think it would look well turned upside down, for a cornice, I guess I'll try.' Accordingly, a conspicuous building in Summer-street has such a cornice: The experiment, to be sure, is not strikingly successful.

Again, a sensitive classicist says, 'Don't touch, with rude fingers, these ancient, sacred forms. You may copy a little, but be careful to copy exactly. Don't dare to shake up these wonderful fragments.' 'I'll just try,' says the Yankee; and he shakes the kaleidoscope till it shows him a fair interior cornice—new out of the old,—classical yet original,—and he puts it up in Winter-street. Honour to the successful boldness of that man, whom, by the way, too few have honoured.

One says, 'I'll try an iron building. For ornament, I'll try what I've seen used in stone.' The experiment is going on, and the Yankee begins to see how insipid are Corinthian caps of cast-iron,—how all the interest of the delicate carving is lost when it comes to be cast. You can see he feels nervous, for he is smearing them with gum and sprinkling them with sand, a sort of tar and feather architecture. We won't give up the iron. It is not the material which has failed, but we were mistaken in subjecting it to stone ornament.

The 'trimming' style of building has been tried on and worn threadbare. One courageous man says,—'I'll try a cornice made of the old homely brick, on my big building up in Washington-street.' People look at the cornice, and remark how it grows out of the wall, as if necessarily of the same material; and they find that they can dispense with the binding after all.

Now the way the Londoners manage is the reverse of all this. An architectural guild has settled everything by rule and line. The great divisions are sharply marked out—Greek, Gothic, Revival. These architects have copied three Greek monuments, and piled them one upon another at St. Pancras. They have frozen the Gothic into the Parliament Houses. They have smeared the great town with stucco moulded into renaissance ornament.

The Greek was god-like when it blazed with colour above the blue sea: the ghost of the Parthenon is yet lovely: the Gothic is sublime in Westminster Abbey: Whitehall, and St. Paul's, and Somerset House, are graceful and imposing. But the question is, 'Why should the world be filled with bad copies of Whitehall?' London is full of unsuccessful, ineffective, renaissance buildings: English architecture is frozen.

Now what is to save us from falling into the same stupor? Our very barbarism. We are saying, in our rough way, 'We won't be bound by your rules: we'll try all sorts of things in all manner of places.' By-and-by, perhaps, we shall see clearly the truth that merit in a building depends on the developement of that building's individuality, consistently with its position in time and space;—in a word, that 'its architecture should be a function varying with the variation of all its co-efficients;' hence that preceding styles should be *used* for instruction, not *abused* for imitation.'

SUNDERLAND DOCKS.

INSTITUTION OF CIVIL ENGINEERS.

On May 13th, the evening was entirely devoted to the discussion of Mr. Murray's paper "On the Progressive Construction of the Sunderland Docks," read at the previous meeting.

It was said that the site of the docks was very peculiar, inasmuch as they had been constructed on ground gained from the sea by the action of groynes projected from the shore. There had been originally much doubt as to the feasibity of that plan or mode of proceeding: it had however proved very successful. The dams employed were novel in construction, apparently cheaper than usual, and had been used with success in exposed positions. There had occurred some casualties with one of these dams, which were unanxiously met, and would be interesting features in the paper if added before publication.

All the harbours on the north-east coast suffered more or less from the formation of bars across the mouths of the harbours themselves, or of the rivers leading to them. The difficulties in keeping open the [illegible] were considerable, and the [illegible] hitherto employed had not been very successful: the system [illegible] had adopted to be [illegible] devised, and the results were stated to be superior to anything attained elsewhere: it would be very desirable to be well informed on all these particulars.

The effect produced by the three southern groynes placed seaward of those originally constructed, had been to collect a mass of sand and *débris* on their southern sides; whilst the old groynes at the northern end of the embankment collected the sand on their northern sides. This apparent anomaly was due to the action of the litoral currents, which set sooner into Hendon Bay than at the mouth of the harbour, in consequence of the tidal wave having a more rapid progress in the deep water of the offing than along the shallow water of the coast. In consequence of this, there was a counter-current northwards from Hendon Bay, and similar counter-currents existed both north and south of the mouth of

the harbour, caused by the projection of the piers. A point had been observed between the northern and southern groynes, where there was a junction of these tidal currents, indicated by a spit of sand and gravel.

The coffer-dam in the tide-way of the river enclosed 2½ acres within it; there was considerable difficulty in obtaining a secure footing for the main piles, but after a deposit of clay had been made, the object was effected, and being secured together by walings and bolts, the dam proved quite water-tight. A series of raking shores inside gave great solidity to the structure, and enabled the rock to be excavated close up to the inner piles.

The sea coffer-dams of the channel were, however, of a different construction;—the object being to protect the inner dam by another in front of it, in skeleton, secured by a deposit of clay brought up to the low water-mark. The inner dam had then a mass of clay deposited on the interior side, having a tendency to force it outwards, but this effect was prevented by a series of raking shores. This pressure had the desired effect of keeping all in place, although powerfully acted upon by the waves of the sea. On more than one occasion it had been found necessary, during raging storms, to add extra weight to the dam, by bringing waggons, heavily loaded with rubble stone, along the railway, to the centre part. The effect of this additional weight was to impart greater stability to the structure, even when the waves were lashing against the timbers with considerable violence.

The average cost of the three channel coffer-dams, for timber, iron, and labour in fixing, and for depositing the clay, amounted to 19*l.* 3*s.* per lineal yard, and deducting from that sum the value of the timber which had been used in other portions of the work, the actual cost had been 16*l.* 12*s.* per lineal yard of coffer-dam, exclusive of the expense of rooting out the timbers and removing the clay. When compared with coffer-dams of the usual construction, even in situations not exposed, as these were, to the action of the sea, the cost was very moderate.

The scouring conduits were supplied by water from the half-tide basin, through archways, into a well 40 feet long, on each side of the shipping entrance. The four entering ports from each well were closed by shuttles, having the cills all laid at one level of 23 feet below the datum, or 8 feet 6 inches under low water of ordinary spring tides.

Each entrance was 7 feet wide by 9 feet high, and the conduits were separated into two, for a short distance within the discharging ports.

	Under low water of spring tides. Ft. In.
The first pair adjacent to, and on either side of, the shipping entrance had their bottoms laid at the depth of ...	12 0
The second pair beyond on each side ...	9 4
The third pair „ ...	7 4
The fourth pair „ ...	5 4

The sectional areas of the last-mentioned pairs were about 10 per cent. less than the sectional area of the entering ports, being each 7 feet wide by 4 feet high.

The sectional areas of the first-mentioned pairs were about 20 per cent. less than the entering ports, being each 6 feet 9 inches wide by 4 feet high.

The sectional areas of the intermediate pairs were proportioned in like manner, with the intention of keeping up the force of the currents; and on plan the conduits had the form of a fan, for the purpose of conducting the issuing water into the centre of the channel.

The area of the Great Dock, with the Southern Half-Tide Basin, was taken at 34 acres = 1,481,040 superficial feet.

The scouring water, at an ordinary spring tide, might be lowered to the permanent level in the dock, being a depth of 4 feet 6 inches.

Hence, 1,481,040 × 4·5 = 6,664,680 cubic feet of water available for scouring.

Eight apertures, each 7 feet wide by 9 feet high.....	=	504 sq. ft.
Deduct 10 per cent. for friction through the conduits	=	50 „
Gave as available area for scouring water	=	454 sq. ft.

	Ft. In.
Then the rise of an ordinary spring tide ..	= 14 6
Deduct for rise of tail-water	= 1 0
	13 6
The mean depth 4 feet 6 inches ÷ 2.....	= 2 3
Leaving mean pressure	= 11 3

which was calculated to produce a velocity of 862·44 feet per minute. Then 862·44 × 454 = 391,548 cubic feet per minute,

and $\frac{6,664,680}{391,548}$ = 17 minutes

Deduct 2 minutes consumed in opening the shuttles, leaving 15 minutes available time for scouring.

Assuming $\frac{6,664,680}{15}$ = 444,312 cubic feet per minute, which, passing through the sectional area of the channel, on the inner side of the pier heads = 1,232 square feet.

$\frac{444,312}{1,232}$ = 360 feet per minute,

= 4·091 miles per hour for the mean current,

= 3 166 miles per hour along the bottom, which was a current capable of carrying along large shingle and broken stones.

The effect of an experimental trial had been most conclusive. Although a large quantity of clay remained in the channel of the outer coffer dam, standing at the height of 6 feet above the bottom, and consequently holding the water within it in a quiescent state, yet when the shuttles were drawn, although there was a depth of 16 feet of water in the channel, or 4 feet above low water of spring tide, and the pressure of the water in the docks only 10 feet, and when closed was reduced to 7 feet, the column of issuing water caused that in the channel to be heaped up; and, being prevented by the channel cut through the marly rock, from escaping laterally, the whole mass of fluid was set in motion like a river. Meeting with the resistance of the clay in the outer coffer-dam, it rose and fell over it, as a tumbling bay; and even then the course to seaward was strongly visible on the surface, for a distance of more than 2,000 feet beyond the pier-heads.

It was stated, that Mr. Murray might be congratulated on having carried out a system of sluicing which promised to be useful in important cases. It was argued, that a marked distinction should be drawn between the operation ordinarily mis-called sluicing, or scouring, and the much more effective principle applied in this case. In the former, the object was to direct a small stream of water, with a high velocity, directly upon the spot to be scoured; and though this was usually effective, in removing deposit from one particular place, it only carried it a short distance away, to be soon again deposited; and hence, as at Dover and many other places, this system of scouring had, from its inefficiency, fallen into disrepute. The process, however, adopted at Sunderland, was on a different principle, namely, to create what might be called a temporary artificial river, which, running in a well-defined channel, for a certain time, at low water, should not only scour or clear the bed of such channel from deposit, but should carry that deposit away to a considerable distance. The velocity with which this scouring stream should run could be perfectly regulated by the sluices, the only object of which became, in this case, to supply such a quantity of water into the channel as would impart and maintain the velocity required: they, therefore, should be so placed as to distribute the supply widely, and thus to insure an equable stream in the channel. It was considered important, that the channel should become gradually narrower towards the mouth, so that the stream might act with the greatest power on the part where the deposit was most likely to occur. Confident expectations were held out, that by the more general application, under suitable regulations, of this system of sluicing, deep entrances might be efficiently and economically maintained in situations where they would otherwise have been impracticable.

THE HOUSE OF PEERS ON ARCHITECTURAL AND ART IMPROVEMENTS.

ON Friday, 23rd inst. Lord Ravensworth brought several points of architectural and sculptural interest under the notice of the House of Lords. His lordship first alluded to the projected approaches from Pall-mall to St. James's-park, and remarked, that in connection with the proposed improvement it was expedient to consider whether the east front of St. James's Palace might not be made a little more ornamental. The central gateway was a fair specimen of the style in which it was erected, but on the east side of the gateway was a most faulty specimen of that style, crowded with windows, and so rotten as to risk being blown down by the wind: it was surmounted, too, by chimney-pots not fit for farm-houses. As to the internal accommodation, the ladies of England who attended her Majesty's levees had but too much reason to complain. The ground wasted in court-yards might provide a large amount of accommodation. He wished to call the attention of Government to these desirable alterations. With reference to metropolitan statues, his lordship pointed attention to the fact that one of the pedestals in Trafalgar-square was still unoccupied. In Hanover-square there was a statue of Pitt, on a lofty pedestal, while northward, in a direct line, was one of Lord George Bentinck in Cavendish-square, where also an equestrian statue of William, Duke of Cumberland, stood on so low a pedestal that it could not be seen to advantage, being overshadowed by the higher statue adjoining. The grotesque effect ought to be obviated by placing it on a higher pedestal, and turning the figure in a different direction. The statue of the Duke of Kent, at the top of Portland-place, one of the widest streets in the metropolis, was too small to terminate such a vista, hiding itself as it did among the trees. The position reminded him, with the alteration of a single word, of the line in the Latin poet:

"*Nec* si cupit, *ante* videri."

He suggested the removal of the statue to the front of the new entrance to Buckingham Palace, in compliment to her Majesty. His lordship concluded by suggesting that now the pictures of Turner had been decided in Chancery to belong to the nation, they should be provided with a fitting gallery, and restored to the light. If a building could not be at once erected, Government ought to hire a public room, where the pictures would be safe from injury, while the public would have the advantage of seeing them. Lord Redesdale was of opinion that a straight road past Buckingham Palace, at the west end of Pall-mall, would be preferable to the park improvement proposed by the committee. His lordship thought there should be no line of road at all across the park. The Marquis of Clanricarde agreed with Lord Redesdale as to the straight road, and with Lord Ravensworth as to the want of accommodation at St. James's Palace, which was unbecoming the dignity of the Sovereign. Lord St. Leonards called attention to the state of one of the fronts of Somerset House, disfigured by two rows of chimneys, and suggested the removal of such an eyesore. It was impossible for any one to walk the streets and not be convinced of the want of a pile of buildings for the offices of the Government. The Earl of Malmesbury also urged similar views, and remarked that the Foreign Office was in so critical a state that it had to be propped up, and it may be remembered that a great part of the roof fell in some years since, and nearly destroyed the inmates. The accommodation for the reception of distinguished foreigners was disgraceful to the country. The Marquis of Lansdowne was understood to say that notice had been given in the other House for a committee in order that it might consider the plans and proposals which would be laid before it on the subject of new Government offices. Besides being an ornament to the metropolis, he believed that the erection of new buildings would ultimately prove more economical than any other way of providing the accommodation required. Earl Stanhope said that forty years ago there were no public statues but statues of royal personages. Now there were many of eminent public men. The great want, however, with respect to these statues was the omission of any inscription on the pedestal, except the name and date of birth and death.

METROPOLITAN BOARD OF WORKS.

AT a meeting of the Board, on Monday last, a report in favour of Mr. Bazalgette's plan for the sewage interception and main drainage of the districts *south* of the Thames, was carried, on the motion of Mr. Carpmael; and a deputation was appointed to see Sir Benjamin Hall on the subject. A point was raised by Mr. Leslie, touching the proposed outfall at Plumstead, which will probably lead to the removal of the outfall farther from London.

The scheme for the drainage of the north side of the Thames has been printed.

THE PROPOSED MEMORIAL OF THE '51 EXHIBITION.

IN reply to the subscribers to the memorial who have addressed us on this subject, we are enabled, by Alderman Challis, to state that differences of opinion as to the mode of carrying it out have alone postponed the fulfilment of the idea. The money collected has been funded, and before long we shall probably be able to announce the course determined on. The money was subscribed for a memorial of the Great Exhibition, and to that specific object it should be applied.

TO COLOUR MORTAR.

IN reply to the inquiry at p. 280, to colour mortar for what is called front work, I would recommend pounded hot lime, fine clear sharp sand, and smiths' ashes (passed through a fine sieve), in *equal* proportions. This will make an excellent hard *dark* mortar. Should a darker colour be desired after this admixture, a less proportion of sand to a greater of smiths' ashes would do it; also, if soot were added to the water previously to its being chopped up with the lime, &c. it would assist. But what is the best, "*after all*," would be to add black oxide of manganese: this

would be a lasting colour, which no weather would deface: the quantity required of this latter is but small, and is well understood by a "good bricklayer." It is used for staining the red roofing tiles to imitate slate.—J. B. W.

Notices of Books.

Examples of Antient Domestick Architecture. By Francis T. Dollman, Architect. Part I. London: Bell and Daldy. Also at 6, Albert-street, Regent's-park.

There has been a lull for some time in the production of ancient examples: Mr. Dollman breaks it worthily. He proposes in the work before us to illustrate the hospitals, bede-houses, schools, almshouses, &c. of the middle ages in England. In the present part, he gives ten plates, four from St. John's Hospital, Northampton, and six from Grey Friars [or Ford's] Hospital, Coventry, the latter one of the most beautiful specimens of mediæval wooden construction in the kingdom. The accuracy of Mr. Dollman's pencil is known to most of our readers.

Miscellanea.

Stonemasons' Dispute and Disturbance at York.—Mr. Lucas, the contractor for the stonemasons' work required on completing the additional buildings at the North and East Riding Pauper Lunatic Asylum, at Clifton, has had a dispute with his workmen, and he discharged twenty of them on 26th ult. and on 7th inst. brought nine men from Bradford, who were intimidated by his old hands, and prevented from continuing in his employment. One of the discharged workmen used threats, for which he has been sentenced to a month's imprisonment, with hard labour, the magistrates remarking that they were resolved to break up so fearful a combination; and that while workmen had a right to combine for their mutual protection, they had no right to tyrannize over their fellow-workmen, or to prevent their former employers from obtaining new hands. One of the causes of the disagreement was a demand made in course of the contract work of a rise in wages of 6d. a day, to which, however, the employer agreed for a time, to suit his own convenience. Another was a demand of short time on Saturdays. One of those who appeared for the defendants charged with intimidation, said the employer agreed to give the increased wages, with three months' notice, but had turned them off at a fortnight's notice. One of the magistrates, in reference to the unlawful combination, said the secretary and treasurer of the club were each liable to three months' imprisonment.

New Public Health Bill.—In the House of Commons, last week. Mr. Cowper, in moving for leave to introduce a Bill to amend the Public Health Act, stated that the measure was rendered necessary in order to correct the defects and ambiguities of the old Act. His Bill was to give power for the effectual cleansing of pavements, and removal of refuse and filth from the rear of houses. It would empower authorities to establish a system of drains and sewers to be carried out at a certain distance from the houses, also out-falls and reservoirs, into which the refuse or sewage could be carried. It would provide for sewage being applied as manure where practicable. The Bill would also extend the power of raising money for the erection of public works, and for repayment of the same over fifty years. The Bill was only intended to apply to towns where there was no representative government. Leave to bring in the Bill was then given.

To Clean Windows.—Windows should be cleaned with whitening, mixed very smoothly in some water: the addition of a very little *gin to the water* is a great improvement: afterwards polish with chamois leather. In Holland, small garden-engines are used in cleaning windows on the outside, an excellent plan, if used very early in the morning.—J. B. N.

On the Cultivation of Flowers in Windows.—There are fewer tests of a happy home *within* than the flower-decorated window, and neatly-kept garden; and there is no occupation for the leisure hours more calculated to keep it so, or to soothe the mind. It yields pleasure without surfeit: the more we advance, the more eager we become. And, how unlike this is to most of our worldly engagements! To those *blessed* with children, how delightful it is to bend their young minds to a pursuit so full of utility and intellectual instruction, combined with the advantages usually accompanying industry; and in children, carefulness and thought about their plants will lead to the same feelings respecting other matters.

J. B. N.

The Manchester Fine-Art Exhibition Building.—A meeting of the subscribers to the guarantee fund for the forthcoming Fine-Art Exhibition Building, at Manchester, was held in the Town-hall, Manchester, on Tuesday in last week, when it was resolved to hold the exhibition next year. The Earl of Ellesmere was elected president, and the Mayor of Manchester, chairman. A report was read, announcing that her Majesty had accorded her patronage, and the Prince Consort his favour to the proposed exhibition, although the prince regretted that previous exhibitions had not resulted in any permanent benefit to the district in which they had been held. The deputation who waited on H.R.H. however, assured him of the great probability of a permanent Museum of Art and Industry being established on the foundation of the Manchester Exhibition. An offer had been received from Messrs. Young and Co. of London and Leith, the contractors for the new Museum building at Kensington Gore, to erect a fire-proof building capable of holding 20,000 people for 22,500*l.*; the original estimate being 25,000*l.* The total estimated expenditure will be 40,000*l.* Messrs. Fox, Henderson, and Co. had also sent estimates. The building is to be erected in six months' time. The guarantee fund consists of thirty-two subscriptions for 1,000*l.* each, and sixty for 500*l.* each,—in all, 62,000*l.* Our readers will have seen that a design for the projected building has been advertised for.

New Westminster-bridge.—In reply to Mr. Henley, on the 19th inst. in the House of Commons, Sir B. Hall said that, after he came into office, the contractors for the works of the new bridge became bankrupts, and he placed the matter, which was attended with very great difficulty, entirely in the hands of Messrs. Rendell and Simpson; and he hoped, in a week or two, to be able to lay their report on the table of the house, as to the present state of the works and the course they recommended to be adopted.

New Streets.—I have this moment read your proposition for a new street, east and west. Could not something be done towards opening the communication with Leicester-square, by continuing King William-street, Strand. This was intended by Mr. Nash, but was prevented by the obstructives of St. Martin's, who would not consent to part with their workhouse—it was so "dear to them." If this could be accomplished, it would remove, from one of the finest sites in the metropolis, a nuisance of so extensive a character, that it is presumed its equal is not to be discovered in mighty London.—A. B.

The Iron Trade.—Complaints prevail in Staffordshire that orders come slowly in, and the nominal prices of last quarter-day have not been sustained, an extensive system of "underselling," as it is called, being prevalent; in other words, the nominal prices are, as usual, a point rather to be aimed at than realized. In Yorkshire and Derbyshire, the trade is rather in an active state. The ores of Northamptonshire are coming into extensive use.

Manchester Royal Institution.—In connection with the forthcoming Exhibition of the Manchester Royal Institution, it may be useful to mention that the Exhibition will open about three weeks after the close of the Royal Academy. The council are particularly anxious to obtain as good an exhibition as possible, and for that purpose the Honorary Secretary, Mr. Edward Salomons, has been in London, to obtain pictures from the artists. The inducements held out to contributors, are the general taste for the fine arts in Manchester, and the valuable pictures that are there purchased.

TENDERS

For erecting six pairs of semi-detached villas, near Reading, Berks, for Mr. C. E. Vine. Mr. W. H. Lovett, architect:—

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gas-holders, acid pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge street, Manchester.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter.—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and I there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Rentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

¼	⅜	½	⅝	¾	1	1¼	1½	2	3 in.
9d.	11d.	1s.	1s. 3d.	1s. 5d.	1s. 7d.	1s. 9d.	2s.	2s. 3d.	2s. 6d. 2s. 9d.

Super-extra stout quality.

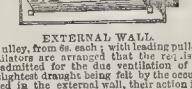
2	2½	3	3½ inches.
2s.	2s. 3d.	2s. 6d.	2s. 9d. 3s. per yard.

No. 6. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1¼	1½	2	2½	3½ inches.
8d.	10d.	11d.	1s.	1s. 3d.	1s. 6d. per yard

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door springs, and Solid Round Rubber Cord of all sizes and any length. Bilbied Cushions and Rubber Strips cut to any pattern for bagatelle tables.

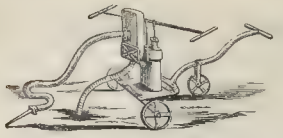


Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

VENTILATION.—PURE AIR.

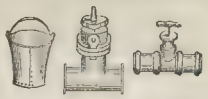


Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 106, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.



B. FOWLER, HOLMAN, and CO.

SOLE MANUFACTURERS OF HOLMAN'S PATENT DOUBLE-ACTION CESSPOOL, SEWER FLUSHING, LIQUID MANURE, AND UNIVERSAL FORCE PUMP.

The simplest, cheapest, and best thing of the kind before the public; admirably adapted for thick substances; valve ways three times usual size, made to suit liquors of all kinds, hot or cold, is portable, or can be fixed with perfect ease. Delivers a large quantity at small labour. A really good article, commanding extensive home and export sale.

B. FOWLER and CO.'S

FARM and COTTAGE PUMPS, 30s

All sizes and descriptions of Pump, in various plain or ornamental patterns, for public places; for deep or shallow wells. Brass Lift Pumps, Engine Frames, Horse Gear, Crabs, Pulley Blocks, Wrought Pails, and Rubbish Baskets, Sewer Lamps, Sluice and Hot-Water Valves, at lowest prices.

N.B. Every attention paid to country, export, and trade orders. Experienced workmen sent to any part of the kingdom, to fix PUMP WORK, HOT-WATER, STEAM, BATH, or DRYING APPARATUS.

S. W. SILVER and Co. Works, North Woolwich.

TESTIMONIALS.

"Commercial Mills, Cornbrook, Manchester, Oct. 6, 1854.

"Messrs. S. W. Silver & Co. 3 and 4, Bishopsgate-street-t, London.

"Gentlemen,—We have been using alm ost exclusively, for the last three years, your Packing to our stuffing-boxes and steam and water joints, previous to which time we tried all the sorts which came under our notice, but yours we consider decidedly the best and most economical.—We are, yours respectfully,

"Joshua Sorocold and Sons."

"King and Queen Iron Works, Rotherhithe,

"London, Nov. 17, 1854.

"Gentlemen,—We have tried your Patent Packing for some time in our steam-engines, and also in steam pipe joints, and find it efficient and economical, and to be much superior to the ordinary hemp packing. It is especially serviceable in the slide valves.—Yours truly, "Howard and Hill, and Co.

"Messrs. S. W. Silver & Co. 3 & 4, Bishopsgate-street, London."

"Works, Deptford, Jan. 29, 1856.

"I have pleasure in stating that the Packing of Messrs. S. W. Silver and Co. has been in use in the various parts of the engines on board the steam-ships of the company and given every satisfaction. "J. Beardmore, Engineer,

"General Steam Navigation Company."

Copies of further testimonials forwarded, on application to S. W. SILVER and Co. Nos. 3 and 4, Bishopsgate-street Within, opposite the London Tavern.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to the destination, whether for stucco, brick-work, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belve-lere-rd, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage of greatly excels them in its cementitious properties; that it is not affected by frost, and does not age in any temperature. Account of COMPARATIVE EXPERIMENTS of the strength of this and other Cements, tried at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbanks-reet, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS. The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all works requiring neatness, decision, and as having all the qualities requisite for an impervious cement and a fine quality stuff for Cornices and Mouldings. The Company also supply BLUE LIAS LIME, ground and stone, which will carry more sand than any in the market.—Communications to the General Offices, 80, Old Broad-street, London; to the MONUMENT, 4, Caroline-place, City-road; or to Mr. TIMEWELL, the Depôt, 2, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

Agents in London, Messrs. GEORGE POTTER and CO. Limemerchants, Purfleet-wharf, Earl-street, Blackfriars, and No 18, North-Wharf-road Paddington.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which every great advantage in quality is obtained over the old method of manufacture, insuring at once uniformity of colour and quality, Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms. Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 20, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

BLUE LIAS LIME.—Messrs. GREAVES and KORSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Roman, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote—office, at Warwick

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 8d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-in-Surrey Stone Lime Works on the Medway, near Rochester.

MEDINA CEMENT CONCRETE BUILDINGS.
This mode of applying cement is suitable for sea groyne, sea walls, and for soldiers' huts, emigrants' dwellings, temporary churches, school-houses, and workmen's cottages, all of which may be built with greater rapidity and economy than with any other materials; good cement and sea beach, or washed gravel stones, only necessary.
A sea groyne 200 feet in length, erected four years since in Sandown Bay, Isle of Wight, is a perfect specimen.
Two concrete models may be seen at FRANCIS' (BROTHERS), Cement Works, Nine Elms, London; and two soldiers' huts have been built by them for the Government, at Shorncliff Barracks, near Sandgate, Kent.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead; whilst the consumption of material is less than for one coat. It dries very fast and hard
HUBBUCK'S STONE COLOUR BODY PAINT the same as the former, at three-fourths the price.
HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and iron exposed to salt water; neither bilge water, nor noxious vapours from cargo, nor heat on frame of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages stamped. Hubbuck's London Patent; and when so marked the quality is guaranteed.
HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Timber coated with this Composition is attacked by the worm neither do barnacles attach to it.
Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.
OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

GREAVES'S BLUE LIAS LIME.—The above Lime supplied direct from the works to wharfs along side the rivers or canals, or railway stations, or vessels in the docks. A large supply always in stock. CHARLES RICHARDSON, Brick, Lime, and Cement Merchant, 3 and 6, South Wharf, Paddington.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump lime from the Works, at the Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Myland, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, Enchina and French Plaster, &c.

PORTLAND and ROMAN CEMENTS.
BLYTH BROTHERS,

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane Dulwich. Price of good stock bricks, 25s. per thousand on the field, for cash.—Application to be made to the Secretary, A. BANHAM, at the Works.

CHEAP WHITE BRICKS, for FACING HOUSES, Beard's Patent. These bricks are of excellent make and colour, and impervious alike to frost, and do not vegetate on the same green. For particulars, address, Patent Brick Works, Rugby, Warwick-shire

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 to 30,000 bricks per day, of far superior quality to hand-made, with three horse power, one man to feed the machine with clay and two to remove the bricks. For a lithographic description see "Practical Mechanic's Journal," for January 1st, 1855.—Any further information or the machines seen at work on application to Mr. HUMPHREY CHAMBERLAIN, 8, Compey near Worcester.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working to a field at Addington, near Croydon, and arrangements are made with the owner for hearers of a letter from the Secretary, to see it in operation every Thursday, at 1 Friday
HENRY C. SCOTT, Sec.
37, King William Street, City.

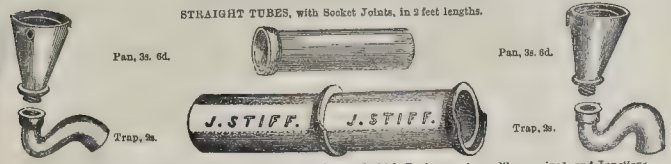
BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—offices, 1, Adelaide place, London bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last when wood and iron are rotten and gone, and will last when wood and iron are rotten and gone, as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 3d. per foot. This leave to include tiles, labourers, Aqua-vitæ sand, cement, and hair. May be had in London, Gloster, Bridgwater, and Rugby

PEAKE'S TERRO METALLIC TILES, PIPES, &c. Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No 21, WHARF, Macclesfield-street, North, City-road Basin. Second, that the trade terms, "TERRO-METALLIC" is the exclusive trade of the Proprietors; and, thirdly, that the "Reports of the Jurors," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TO STONEWARE POTTERS, BRICKMAKERS, CONTRACTORS, and OTHERS.—A POTTERY and BRICKWORKS TO BE DISPOSED OF, on easy terms, the railway station, and within reach of the large Government works now in progress at Dover. Humble, &c. &c. The machinery, buildings, and plant are upon the most improved plan, and adapted for carrying on a large stoneware business, for which the clay is well suited. There is ample space and every requisite for making from four to five million bricks per annum, large sheds for making tiles and red ware; a dwelling-house, stable, &c. &c. The whole in complete order and now in operation.—For particulars, apply to Mr. F. SCHULTZ, Solicitor, 4, Dyer's-buildings, Holborn, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale.
With improved Clappers, and peculiar to a new system which gives all error tone and facility for ringing.



GREAT REDUCTION IN PRICES.

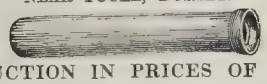
GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.



Also to his IMPROVED REGISTERED CLOSET PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

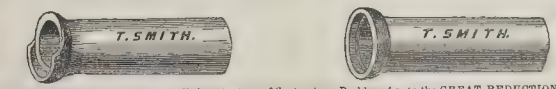
N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

THE BRANKSEA POTTERY,

NEAR POOLE, DORSET.

GREAT REDUCTION IN PRICES OF DRAIN-PIPES.

TO THE METROPOLITAN BOARD OF WORKS, DISTRICT BOARDS, BOARDS OF HEALTH, TOWN COUNCILS, IMPROVEMENT BOARDS, SURVEYORS, AND BUILDERS.



THE BRANKSEA POTTERY and CLAY COMPANY are prepared to supply all descriptions of Glazed Drain-pipes, Bends, Double and Single Junctions, Closet-pans, &c. Also, Terra-cotta Chimney-pots and Fire-bricks of a very superior quality at moderate prices.

N.B. A LIBERAL DISCOUNT TO THE TRADE. A LARGE ASSORTMENT OF GOODS CONSTANTLY ON SALE.

The clay obtained from the pits on the island of Brancksea is of the finest quality, and the goods are manufactured by men of long experience in the trade, with the aid of powerful machinery. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.

A list of prices forwarded free on application to Mr. T. G BECK, at NEW WHARF, No 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. H. PETTS, at the Works, Branksea Island, Poole, Dorset.

GREAT REDUCTION IN PRICE OF SMITH'S DRAIN-PIPES.

THOMAS SMITH begs respectfully to call the attention of Contractors, Builders, &c. to the GREAT REDUCTION in his PRICES of GLAZED STONEWARE DRAIN-PIPES, &c.

T. S. is the ORIGINAL Manufacturer of the CONED or REBATED SOCKET PIPES, and the Medium-backed Closet-pans (with superior White Enamel Glaze inside), as made under the direction of JAMES PILBROW, Esq. Engineer to the Tottenham Local Board of Health, with which he is now supplying several large towns.

N.B. Half-socket Pipes same prices, which obviate all difficulty arising AT ANY TIME from the Inspection of Pipes in the event of the unusual circumstance of a Stoppage occurring, or a Junction being required to be inserted.

DRAWINGS AND LISTS OF PRICES FORWARDED FREE ON APPLICATION.

MANUFACTORIES,—71 and 72, PRINCES-STREET, LAMBETH; and ALBION POTTERY, OLD FORD, BOW.

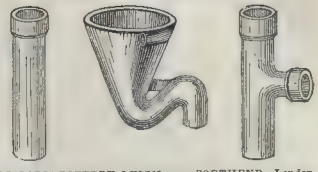
Drawings and Prices will be forwarded on application.

SOCKET.

HALF-SOCKET.



MANUFACTORIES: HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE and SMETHWICK, near BIRMINGHAM.

OFFICES: HIGH-STREET, LAMBETH, LONDON.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment,—Falcon Wharf, 37 Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine-Elms, London, and at all their Warehouses.

PRICES.

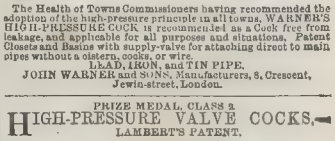
3 inch bore, in 2 ft. 6 in. lengths, at				3d. per foot.	
4	"	"	"	4d.	"
6	"	"	"	6d.	"
9	"	"	"	9d.	"
12	"	"	"	1s. 3d.	"
15	"	"	"	2s. 6d.	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.



PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

HIGHGATE ARCHWAY and BALL'S POND POTTERIES.—Drain Pipes, Bricks, Tiles, Chimney and Garden Pots constantly on sale

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS, LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO BROOM-MAKERS.—The Vestry of St. Martin-in-the-Fields will meet on THURSDAY, the 5th of JUNE next, to receive TENDERS for the SUPPLY of BASS BROOMS, HANDLES, and BROOMHEADS, to be required for sweeping the streets. Further particulars, and a sample of the brooms, may be seen at the Office of Mr. BURSTALL, Surveyor to the Vestry, 15, Castle-street, Long-acre. Tenders to be sent to the Vestry, at the Vestry-house, before THURSDAY, the 5th of JUNE next.

J. DANGERFIELD, Vestry-Clerk.

May be viewed on Monday previous and morning of Sale. Catalogues obtained at Mr. PEAKE'S Offices, 44, Tooley-street, Southwark.

PECKHAM, SURREY.

MESSRS. BLAKE will SELL by AUCTION, at the SURREY-CANAL BRICKFIELD, Crab Tree Shot-road, on WEDNESDAY, JUNE 4th, at THREE for FOUR o'clock, by order of the Executors of the late Mr. Davis, 1,000 BRICKS.—May be viewed and catalogues had on the Premises; at the Inns in the neighbourhood; the Artichoke Inn, Newington-causeway; and of Messrs BLAKE, Croydon.

SALES BY AUCTION.

Valuable and important Estates, St. Pancras, by order of the Vestry of the parish of St Pancras.

MESSRS. DENT and SON have received instructions to offer for SALE by AUCTION, on WEDNESDAY, JUNE 11, the very valuable and extensive LEASEHOLD PREMISES, situate 10, Edward-street, Hampstead-road, St. Pancras, heretofore the board-room, offices, stone-yard, and premises of the Southampton Paving Commissioners, now transferred to the vestry under the Metropolis Local Management Act, held under Lord Southampton for a term of which sixty-five years will be unexpired at Michaelmas next, at a ground rent of £72 12s.; also, a Freehold House and Premises No. 7, on the south side of Charles-street East, originally erected for the said Commissioners held likewise under the Southampton estate for a term of which fifty-two years will be unexpired at Michaelmas, 1856, at a ground-rent of £9 15s. per annum; the latter underlessed for a term of twenty-one years from Midsummer, 1849, at £45 per annum, the under lessee having substantially repaired and improved the property. Particulars and conditions of sale, with plans, to be had on the Premises; at the place of sale; at the Vestry Clerk's Office, Old St. Pancras, where the lease may be seen; and of Messrs. DENT and SON, Surveyors, 36, Southampton buildings, Chancery-lane, and 38, High-street, Camden-town.

The Valuable and Important Freehold Manor of Newington-Barrow, otherwise Highbury, in the Parish of St. Mary, Islington, in the County of Middlesex

MESSRS. DENT and SON have received instructions to offer for SALE by AUCTION at GARRAWAYS Coffee House, Change-alley, Cornhill, on WEDNESDAY, the 25th JUNE next, the above most valuable and improving MANOR, heretofore parcel of the possessions of the Crown, with all the customary advantages, arising from a manor baron, courts leet, courts of survey, fines at the will of the lord, on death or alienation, quit rents, reliefs, heriots, and all rights, members, profits, emoluments and appurtenances thereto belonging. By a survey made by order of Henry Prince of Wales (the eldest son of King James I.) in 1611, the Manor was found to contain nearly 1,000 acres, of which 112a. 2r. 6p. were freehold, 407a. 0r. 4p. demesne lands, and 454a. 3r. 14p. were copyhold of inheritance. By the rental, dated the same two years' imposed rent is payable to the lord on death or alienation. The quit rents payable at this time amount to £58 11s. per annum, exceeding by over twenty pounds the amount at which they have been settled to be for ever, or are malevolence, are very considerable; and the whole forms an important investment in every respect worthy the attention of gentlemen of the legal profession or the capitalist. Particulars and Conditions of Sale with a plan of the Manor, are in progress, and will shortly be ready at the Place of Sale; the Angel Tavern and the Blue Coat Boy at Islington; the Gate House, Highgate; the Archway Tavern, Upper Holloway; the Compasses at Hornsey; the Plough, Hornsey-road; at the Offices of B. W. POWELL, Esq. Solicitor, 3, Russell-square; and of Messrs. DENT and SON, 36, Southampton Buildings, Chancery-lane and Camden Town.

CAMDEN-TOWN.—Valuable Premises, formerly the Board-room and Offices of the Commissioners of Paving for the Camden Estate.

MESSRS. DENT and SON have received instructions from the Vestry of the Parish of St. Pancras, in whom the above property has become vested under the Metropolis Local Management Act, to offer for SALE, by AUCTION, on WEDNESDAY, JUNE 11, all those substantially erected and valuable PREMISES, with the spacious Yard and Appurtenances, situate No. 10, on the north side of Pratt-street, to which there is a frontage of 52 feet 4 inches, by a depth of 150 feet; held under the Marquis Camden and Prebend of Cantlowes for a term of which 71 years will be unexpired at Michaelmas, 1856, at a ground-rent of 10l. per annum—further particulars and conditions of sale, with plans, to be had on the Premises; at the Place of Sale; at the Office of the Vestry Clerk, Vestry-hall, 98 Pancras Old Road; and of Messrs. DENT and SON, Surveyors 36, Southampton-buildings, Chancery-lane, and 38, High-street, Camden-town.

PORTPOOL-LANE.—Valuable Builder's Stock of seasoned Timber, Plant, Implements and Effects, on the Premises of the late Messrs. Lee and Veal.

MESSRS. EVERSFIELD and HORNE are instructed by the Executors to SELL by AUCTION, on the PREMISES, the extensive and valuable STOCK, on TUESDAY and WEDNESDAY, JUNE 10th and 11th, the FIRST PORTION of the valuable STOCK and EFFECTS, which will comprise a large quantity of well-seasoned yellow and white deals and battens, prepared floor-boards and battens, pine plank, matched lining and skirting, 8in. square timber and scantlings, 4 and 5in. planed and moulding, stone steps slabs, and paving, also, several builder's carts, stone-trucks, and timber-carriage; scaffold-boards, poles, and putlogs; crab-engines, hoisting-gear, trestles, ladders, wheeling planks, barrows, pile-driving engines, and monkeys; a travelling-crane, saw in situ, the workmen's benches; planers', painters', and other useful stores; a few handsome and numerous other effects.—Catalogues will be sent, post-free, to any parties who will apply to the Auctioneers, 40, Parliament street, Westminster.

GOVERNMENT STORES, WESTMINSTER.

MESSRS EVERSFIELD and HORNE are instructed by the Commissioners of Her Majesty's Works and Public Buildings, to SELL by AUCTION, at the STORE YARD, Great Smith street, Westminster, on TUESDAY, JUNE 3rd, at ELEVEN for TWELVE, a large quantity of STORES, comprising mahogany, satinwood, and deal cases, desks, tables, bookcases and shelves, oil-cloth, cocoa-nut fibre, and other matting, cloth cuttings, rope-mats, brooms, chairs, stools, lead, brass, copper, and iron work, oil-tins, and various other effects. May be viewed one day previous, and catalogues had at the Office of Works, 13, Whitehall-place; at the Store yards; and of the Auctioneers, 40 Parliament street, or Coal Exchange.

Valuable Leasehold Builder's Premises, Gray's-inn-lane.

MESSRS. EVERSFIELD and HORNE are instructed by the Executors to prepare for SALE, early in JULY, the valuable LEASE of the extensive and valuable PREMISES, in Portpool-lane occupied by the late firm of Locke and Nesham, covering large area of ground, with covered sheds, timber stages, and 4 saw pits, cart, offices and joiners' shops for city benches, plumbers', smiths', and painters' shops, store-rooms, &c.; also an excellent steam-engine and boiler, 20-horse power, mortising, tenon &c. A large sum has been expended in substantial improvements upon it, premises, and they are held for a long term at a low rental.—60, Parliament-street.

Valuable Materials of the temporary buildings erected in the Prince of Wales's-gardens, in the Green park, Hyde-park, and Victoria-park, for the use of Her Majesty's Government, in connection with the late display of Fireworks

MESSRS EVERSFIELD and HORNE are instructed to SELL by AUCTION, early in JUNE, the valuable MATERIALS, FITTINGS, and FENCING, comprising a very large quantity of timber of the most useful description, in framed principals, inch boarding, 9-inch planking and quarring, also the glazed sashes, doors, and other fittings; the whole of which have been selected with a view to economy, and will be put into suitable lots. For further particulars and permits to see the same apply to the Auctioneers, 40, Parliament-street, Westminster.

PIMLICO.—LARGE CHIMNEY-PIECES, &c.

MESSRS EVERSFIELD and HORNE are instructed to SELL by AUCTION, on FRIDAY, JUNE 13, at TWELVE, at the MARBLE SHOW-ROOMS, Belgrave-place, about 100 CHIMNEY PIECES, in marble, stone, and alabaster, several of which are richly sculptured, and others of a plainer character; also, a Gothic Oven of the manufacturer; an alabaster ditto, with statuary tablet, several wall tablets, and two marble vases. May be viewed three days previous, and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal-Exchange.

SALES BY AUCTION.

Nos. 1, 2, 3, 4, and 5, Camers-street, Chelsea.—Desirable Leasehold Investment.

MR. W. F. HAMMOND will SELL by AUCTION, at the COMMERCIAL HALL, King's-road, Chelsea, on TUESDAY, JULY 1, at TWELVE for ONE, FIVE LEASEHOLD HOUSES, in a neat terrace, in perfect repair. Lease, fifty years, from Michaelmas, 1855. Ground rent, 24l. let to excellent tenants, producing 107l. per annum. Particulars and condition of sale to be had of Mr. C. Hooper, Solicitor, 7, Staple-inn, Holborn; at the Commercial-hall, King's-road, Chelsea; of Mr. Ogorton, 8, Jubilee-place, King's-road, Chelsea; and at the Auctioneer's Office, 3, Carey-street, Lincoln's-inn.

28 ELIZABETH-TERRACE, CHELSEA.

MR. W. F. HAMMOND will SELL by AUCTION, at the COMMERCIAL HALL, King's-road, Chelsea, on TUESDAY, JULY 1st, at TWELVE for ONE, the above genteel PROPERTY, let to a respectable tenant at 52l. per annum; ground-rent, 8l.; lease, ninety-six years, from Michaelmas day, 1855. 80 per cent of the purchase-money may remain on mortgage. Particulars and conditions of sale to be had of Messrs. Wadd and Rees, Esq. Solicitor, 25, Bedford-row; and at the Commercial Hall, and at the Auctioneer's Offices, 3, Carey-street, Lincoln's-inn.

TO BUILDERS. Peremptory and important Sale of Twenty-three unfinished RESIDENCES, forming Lansdowne-crescent Terrace, Lansdowne Road, Notting-hill, and Lansdowne-crescent, Kensington-park, Notting-hill.

MR. ROBINS is directed by the Mortgagee to SELL by AUCTION to the highest bidder, at the Mart, on FRIDAY, JUNE 13, at TWELVE, in 23 Lots, a noble Terrace of TWENTY-THREE SECOND CLASS RESIDENCES and STABLES, forming Lansdowne Crescent Terrace, formerly known as St. Column's-terrace, Kensington-park, Notting-hill. The development of this most attractive estate is rapidly advancing, the superior character and it is considered that the commandable and tenants of the first respectability, the accommodation proposed to be given, the superior construction, will, in the early and salubrity of the air offer most desirable residences in the immediate neighbourhood. There is a garden to each house opening to an ornamental pleasure ground at the rear. The houses are held for a term of 93 years, at a ground-rent of 8l. a year each, and 2l. 2s. a year each to the ornamental pleasure-ground, and it is presumed, when complete, they will readily realize 1,400l. per annum.—May be viewed daily, and particulars had at the premises, at the Clarendon Hotel, on the Estate; of Messrs. Rolland Cockburn, 8, Hinde-street, Manchester-square; at the Auction Mart; and at Mr. Robins's Offices, Cpt. at garden.

N.B.—No reserve bidding whatever will be made by the vendor.

TO BUILDERS.—French Papier-Mâchés direct from Paris, Fancy Decorations, and a large assortment of English Papers.

MESSRS. ROBINS will SELL by AUCTION, at their ROOMS, in Covent-garden, on WEDNESDAY next, at TWELVE, FRENCH PAPERHANGINGS, recently imported direct from Paris, by an eminent house, of the newest patterns in satins and flocks, enriched with gold, also fancy decorations for drawing-room and borders, and a large assortment of English papers of a superior description, arranged into convenient lots.—On view two days prior in Covent-garden

SOUTHALL, MIDDLESEX.—Compact Freehold gentlemanly Residence, Park-like Grounds, Pleasure and Kitchen Gardens, Farm-yard, and Seventeen Acres of rich Meadow Land, close to the railway station, which is undergoing a change.

CHINNOCK and GALSWORTHY have been favoured with instructions to SELL by AUCTION, on THURSDAY, JULY 3, at TWELVE o'clock, at the AUCTION MART, London (unless previously disposed of by private treaty), the important FREEHOLD and small Part Copyhold ESTATE, late the residence of Mrs. Lawes, situate near the high road, at Southall, comprising a good square-built family house, stable, double coach-house, delightful pleasure and kitchen gardens, fish-pond, well stocked and well timbered, and seventeen acres of superior meadow land in high cultivation; the whole lying in a ring fence.—Lesser private particulars, with plans, may be obtained of Messrs. Sole, Solicitor, 3, Hatton-court, Threadneedle-street; of Geo. Wales, Esq. Surveyor, Great St. Helens; and at the Auctioneers' Offices, 23, Regent-street, Waterloo-place.

TO TIMBER MERCHANTS, GUN MAKERS, CABINET AND CHAIR MAKERS, AND OTHERS.

GEO. F. CORBETT will SELL by AUCTION, on TUESDAY, JUNE 3, at ONE o'clock, on the PREMISES, York-road, Lambeth, near the Waterloo Station, on account of inconvenience of sale, about fifty loads of capital dry WALNUT PLANK, and a few loads of SYCAMORE and LIME in PLANK, suited to suit the convenience of sale. May be viewed the day preceding and morning of sale, and catalogues had at the House of York and Hero of Waterloo, Waterloo-road; at the Place of Sale; and of the Auctioneer and Timber Surveyor, Lewisham, Kent.

43, UNION STREET, SOMERS TOWN

MR. LEREW will SELL by AUCTION, on the PREMISES, as above, on THURSDAY, JUNE 12th, at TWELVE for ONE, about 2,000 feet of Mahogany, 6,000 yellow, white, and pine planks, deals, and battens, 2,000 feet of prepared flooring, 3,000 feet wainscot, pine boards, 3,000 feet waintscoting, dry cut stuff, doors, and other useful stock. May be viewed the day prior to the Sale, when catalogues may be had on the Premises; and of the Auctioneer, Cardington-street, Hampstead-road.

WESTMINSTER-BRIDGE-ROAD.—TO BUILDERS, CONTRACTORS, AND OTHERS

MR. LEREW will SELL by AUCTION, on the PREMISES, Palace New-road, on MONDAY, JUNE 9th, at TWELVE, 1,000 yellow planks, battens, battens; 500 squares of flooring, 1in., 1¼in., and 1½in. thick; 3,000 feet 1¼in. quarter-inch; a large quantity of matched boarding, lap bank, and useful old materials; 5 tons iron, 3 capital spring carts, chaise, brown mare, harness, ranges, 24 vcs. old iron, &c.—Auction Offices, Cardinal-street, Hampstead-road.

FARRINGDON-STREET EXTENSION.—Building Materials of several Houses also a large Quantity of surplus Materials.

PULLEN and SON will SELL by AUCTION, on the PREMISES, on MONDAY, JUNE 2, at TWELVE, by order of the Improvements Committee, if their Agent is not up of several Houses, forming the BUILDING MATERIALS and fittings, Timber, Deals, and Battens, Joists, and Turnmill street, Clerkenwell, of the usual description: also a large quantity of surplus materials, as follows, consisting of about 10,000 feet run of 1½in. 1¼in. and 1in. planks, 3in. and 2½in. battens; 2,000 feet run of 1¼in. and 1in. stuff, &c. May be viewed on SATURDAY.—Catalogues had on the premises; of Mr. Gilbert, Land Surveyor, 5, Fore-street, Cripplegate.

2,500 Oak Gates, 5 Tons of Wrought-iron, and sundry loose Materials, removed from Smithfield-market

PULLEN and SON directed to SELL by AUCTION, on the PREMISES, Smithfield-bars, Long-lane, and Weaver-street, Smithfield, on MONDAY, JUNE 2, at TWELVE, about 2,500 Oak Gates, with wrought-iron hinges, Oak Posts, Rails, and Bars, and other surplus Materials. May be viewed on SATURDAY previous.—Catalogues had at the Auctioneer's Office, Guildhall, and of PULLEN and SON, 5, Fore-street, Cripplegate.

June 6, 1856. HENRY CLUTTON, Hon Sec.

ARCHITECTURAL ASSOCIATION.—At the next Ordinary Meeting, to be held at Lyon's-inn-hall, JUNE 13th, the nomination of officers for the next Session will take place; after which Mr. Allom, the Vice-President, in continuation of the paper read at the last meeting, will open a discussion upon the future prospects of the architectural student and of the Architectural Association.—Members of the Association, and of the Profession, are earnestly invited to attend.—The Class of Design will meet JUNE 20th; subject for sketch, "The Junction of Two Buildings of unequal height."

T. W. GOODMAN,
Lyon's-inn-hall, Strand. J. A. BUNKER.

ROYAL ACADEMY of ARTS, Trafalgar-square. The EXHIBITION of the ROYAL ACADEMY of ARTS is NOW OPEN. Admission (from Eight till Seven o'clock), One Shilling. Catalogues, One Shilling.
JOHN PRESCOTT KNIGHT, R.A. Secretary.

THE NEW SOCIETY of PAINTERS in WATER-COLOURS.—The TWENTY-SECOND ANNUAL EXHIBITION is NOW OPEN at their Gallery, 53 Pall-mall, near St. James's-palace daily from Nine till dusk. Admission, 1s.; Season-tickets, 5s. JAS. FAHEY, Secretary.

COMPETITIONS.

TO ARCHITECTS.—NEW CORN EXCHANGE at DEVIZES.—The Committee appointed to superintend the erection of a New Corn Exchange are prepared to receive DESIGNS and ESTIMATES for the erection on a site having a frontage to the present market-place of 46 feet, and extending backwards along the side of the proposed road to the railway station 140 feet, and will give a premium of £21 to the person whose Designs and Estimates are approved of. The Designs, Estimates, &c., obtaining the premium, will belong to the Committee, who do not bind themselves to employ the successful Architect to carry out the works. A sketch of the site, with further particulars, may be obtained on application to the Honorary Secretary. The Designs, &c. to be sent in under seal (without the author's name, but with a motto) on or before the 31st day of JUNE instant, addressed to the Honorary Secretary, Devizes, and marked "Corn Exchange." A sealed letter containing the author's name and address must accompany each plan, which will be opened after the selection has been made.

ALEX. MEEK, Hon. Secretary.
Devizes, 4th June, 1856.

CONTRACTS.

TO BUILDERS.—Persons desirous of submitting TENDERS for BUILDING a WESLEYAN CHAPEL at Bayswater, Middlesex, may inspect drawings, &c. and obtain bills of quantities, by applying to the Architect, Mr. W. W. POCOCK, No. 10, Trevor-terrace, Knightsbridge, where Tenders are to be delivered at SEVEN P.M. JUNE 12, 1856.—The Trustees do not bind themselves to accept the lowest or any of the Tenders.
June 4, 1856.

CONTRACTS.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Director-General of Contracts, War Department, Pall-Mall London, on or before SATURDAY the 14th day of JUNE next from persons desirous of Contracting with the War Department for ERECTING a STORE, to contain Shells for Sea Service, at Upnor Castle, near Chatham. Plans and specifications of the Work are to be seen, and Form of Tender obtained on application at the Store-keeper's Office, Chatham, between the hours of TEN and FOUR, till the 13th of JUNE next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 600£. for the due performance of the contract. Tenders to be addressed to the Director General of Contracts, War Department, Pall-mall, London, and to be delivered free, endorsed "Tender for Works at Upnor Castle." No Tender can be admitted after the said 14th day of JUNE, 1856.

N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Chatham, 27th May, 1856

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Principal Officers of Her Majesty's War Department hereby give Notice, that they will receive PROPOSALS for the following Contract, viz.:—For Work required in forming 1,558 Ventilators in Gables of Field Officers' Quarters, Servants', Soldiers', Hospital Huts, Privies, &c. and in the construction and erection of 13 External Porches to Doors exposed to the weather, of Staff and Regimental Officers' Huts, and 113 Internal Porches to Doors exposed to the weather of Soldiers' Huts, &c.; also for enlarging 17 Ante-Rooms of the Mess Establishments, at the Temporary Barracks, Curragh of Kildare, in the Curragh District. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin; and at the Royal Engineer's Office, at the Curragh, and may obtain specifications, with the terms of Contract. The whole of the work to be completed within eighty-four days after the date of order to proceed with the work. The letters of Tender with specifications to be sealed, and transmitted under cover to "The Director-General of Contracts, War Department, Pall-Mall, London," so as to be delivered free on or before the 9th day of JUNE, 1856, and to be marked on the outside "Tender for Work at the Curragh of Kildare."

Commanding Royal Engineer's Office, Dublin, 21st May, 1856.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Principal Officers of her Majesty's War Department hereby give Notice, that they will receive PROPOSALS for the following Contract, viz.—for the CONSTRUCTION and ERECTION of TWELVE WOODEN BUILDINGS, for staff-officers, Court-house, Lock-up, Guard-room, staff-officers' Stable, Hut for butcher's men, hay, corn, and straw Stores, and waggon and litter Sheds for land transport corps, and about 200 yards of Fencing, at the Temporary Barracks, Curragh of Kildare, in the Curragh district. Persons desirous of Tendering for the same, will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and at the Royal Engineer's Office, at the Curragh, and may obtain specifications with the terms of Contract. The whole of the work to be completed within 94 days after the date of order to proceed with the work. The letters of Tender with specifications, to be sealed and transmitted under cover to "The Director General of Contracts, War Department, Pall Mall, London," so as to be received on or before the 11th day of JUNE, 1856, and to be marked on the outside, "Tender for Work at the Curragh of Kildare."

Commanding Royal Engineer's Office, Dublin, 23rd May, 1856.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Director General of Contracts, War Department, Pall-mall, London, on or before SATURDAY, the 14th day of JUNE next, from persons desirous of CONTRACTING with the War Department, for FORMING PARADE GROUND, at the ROYAL SAPPERS' and MINERS' HUTS, near Brompton Barracks, Chatham. Specifications and forms of Tender for the work are to be obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 13th of JUNE next (Sundays excepted). The person whose Tender may be accepted, will be required to enter into a bond, with two eligible securities, jointly and separately to be bound under a penalty of 100£ for the due performance of the Contract.—Tenders to be addressed to "The Director General of Contracts, War Department, Pall-mall, London," and to be delivered free, endorsed, "Tender for Works at Chatham." No Tender can be admitted after the said 14th day of JUNE, 1856

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Chatham, 31st May, 1856.

NOTICE to BUILDERS.—TENDERS are wanted for the ERECTION of a HOSPITAL at the CAMP at SHORNCLIFF. Plans and specifications, and every other particular, may be obtained at the Surveyor's Office, War Department, Pall-mall, London, on and after MONDAY, the 9th instant, between the hours of NINE and FIVE (Sundays excepted). Tenders to be addressed to the Director-General of Contracts, War Department, Pall-mall, London, to be delivered on or before MONDAY, the 16th instant, after which no Tender will be received. To be endorsed "Tender for Hospital, Shorncliff."

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

War Department, Pall-mall, London, June 2, 1856.

TO BUILDERS, &c.—Notice is hereby given, that the Plans and Specifications for the ENLARGEMENT and REPAIRING of the VICARAGE-HOUSE at Wargrave, in the county of Berks and diocese of Oxford, will be left at the said Vicarage on WEDNESDAY next, the 11th day of JUNE, and six following days (Sunday excepted), and all persons willing to CONTRACT for the same must send in sealed Tenders directed to Rev. H. HUTCHINSON, Swyncy, on or before the 18th JUNE. The lowest Tender will not necessarily be accepted, but the Contractor will enter into the usual legal bond, with two approved sureties for the due execution of the works.

CONTRACTS.

NORWICH NEW WORKHOUSE.—NOTICE to ARCHITECTS.—ADDENDA to INSTRUCTIONS.—Accommodation in eight separate but contiguous rooms, each capable of containing ten persons, and to be used for both day room and dormitory purposes, is to be provided for each sex of Class 2, as named in instructions to architects. The plans, &c. may either be sent by post or parcel, prepaid, or delivered at my office, Little Orford-street, Norwich, on or before the day named in the instructions.—By order,

Norwich, May 22nd, 1856 F. C. BAILEY, Clerk.

GUILDFORD UNION.—To BUILDERS and CONTRACTORS.—Extensive additions and alterations to the Guildford Union Workhouse.—The Guardians of the Guildford Union, in the County of Surrey, hereby give notice that they are desirous of receiving TENDERS for BUILDING NEW SCHOOLS and DORMITORIES, a NEW HOSPITAL and other ADDITIONS and ALTERATIONS to the Workhouse of the said Union according to the plans and specifications prepared by Mr C. H. HOWELL, architect, of Godalming, Surrey, and of the Norwich Union Insurance Office, New Bridge-street, London. The plans and specifications may be seen at the Workhouse, Guildford, after SATURDAY, the 31st day of MAY instant. The Contractor whose Tender may be accepted will be required to give security for the due performance of the Contract. The Guardians do not pledge themselves to accept the lowest or any of the Tenders. Tenders, indorsed "Building Tenders," must be sent to me by SEVEN o'clock in the evening of WEDNESDAY, the 25th JUNE next.—By order of the Board,

W. HAYDON SMALLPEICE, Clerk.

Guildford, 27th May, 1856.

Sewers Office, Guildhall, 20th May, 1856.

TO BUILDERS and OTHERS.—The Commissioners of Sewers of the City of London, acting as the Burial Board of the said City, hereby give Notice, that they will meet in the GUILDHALL of the said City, on TUESDAY, the 24th JUNE next, at TWELVE o'clock at noon precisely, to receive TENDERS for BUILDING a LODGE, CARPENTER'S SHOP, and SHED, in the City of London Cemetery at Little Ilford, Essex, agreeably to plans and specifications to be seen at the Office of the Engineer to the Commissioners, in Guildhall. Security will be required for the due performance of the contract. The Burial Board do not pledge themselves to accept the lowest or any Tender. No Tender will be received after TWELVE o'clock on the day of treaty. Builders intending to tender for these works are requested to notify the same to Mr. HAYWOOD, the Engineer, on or before WEDNESDAY, the 4th JUNE.

JOSEPH DAW, Principal Clerk.

TO BUILDERS and OTHERS.—The Guardians of the Poor of the Edmonton Union will meet at the Board-room at Edmonton, on WEDNESDAY, the 25th of JUNE instant, at noon, to receive TENDERS for the ERECTION and COMPLETION of an INFIRMARY adjoining the Children's Establishment at Chase-side, Enfield, Middlesex. The plans and specifications may be seen at the Office of the CLERK of the UNION, in Silver-street, Enfield; and all further information obtained at the Offices of Mr. T. E. KNIGHTLEY, Architect, 25, Cannon-street, City. Sealed Tenders must be sent to me before the 25th JUNE instant. The Guardians do not bind themselves to accept the lowest Tender.—By order of the Board,

Enfield, June 5th, 1856. JOHN SAWYER, Clerk.

Surety will be required for the performance of the Contract.

SOUTH SHIELDS CEMETERY WORKS. To BUILDERS and CONTRACTORS.—The Burial Board for the Parishes of South Shields and Westoe, in the County of Durham, are prepared to receive TENDERS for the following WORKS in connection with the New Burial Ground, viz.:

CONTRACT No. 1. TWO CHAPELS.

CONTRACT No. 2.—SUPERINTENDENT'S HOUSE, GATEWAY, and GATES adjoining.

CONTRACT No. 3.—GATEKEEPER'S LODGE, GATEWAY, and GATES adjoining.

The Burial Board will not object to receive Tenders for the execution of the whole of the works in one contract. The plans and specifications may be seen at the Offices of the Architect, Mr. ROBERT LAMB, No. 70, Nile-street, South Shields, on and after the 23rd instant until the 10th of JUNE inclusive. Sealed Tenders to be sent in to the Office of the Clerk to the Burial Ground, Chapter-row, South Shields on or before Noon of the 10th of JUNE next, endorsed "Tender for Cemetery Works," Nos. 1, 2, and 3. The Contractor will be required to give security for the due performance of the works. The Board do not bind themselves to accept the lowest or any other Tender.

Information with reference to the subject will be given by Mr. F. CARTER, Engineer, Newnham, 28th May, 1856.

By order, THOMAS SALMON,
South Shields, 21st May, 1856. Clerk to the Burial Board.

NEWNHAM, GLOUCESTERSHIRE.—To GAS ENGINEERS and OTHERS.—Persons willing to CONTRACT for the ERECTION of GAS WORKS at Newnham aforesaid, with all necessary Mains and appliances for the purpose of lighting the said Town, are requested to send in TENDERS, with Plans, Specifications (free of expense), and all other necessary particulars explanatory of the system proposed to be adopted, to Mr. F. CARTER, Solicitor, Newnham, on or before the 19th day of JUNE next. The promoters of the above works do not bind themselves to accept the lowest or any other Tender. Information with reference to the subject will be given by Mr. F. CARTER.

Newnham, 28th May, 1856.

TO BUILDERS and OTHERS.—Persons desirous of CONTRACTING for the ERECTION of a COVERED HOME-STEAD and SIX LABOURERS' COTTAGES on the Priory Farm, Prittlewell, near Rochford, in the county of Essex, may see the plans and specifications at the Spread Eagle Inn, Prittlewell, or at the offices of Messrs. DENTON and DRAKE, of 32, Parliament-street, Westminster, on and after the 9th day of JUNE. Tenders to be sent to Messrs. DENTON and DRAKE on or before the 21st day of JUNE. Quantities will not be supplied.

5th June, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

BOROUGH of SUNDERLAND.—SEWERAGE WORKS.—CONTRACT No. 1.—To BRICK MANUFACTURERS and OTHERS. The Corporation of Sunderland are desirous of receiving TENDERS for the manufacturing and delivering in a depôt within the Borough of Sunderland, the Bricks necessary for the construction of the brick sewers comprised in the contracts, &c. in connection with the said works. The quantity of bricks required will be about two and a quarter millions, including square bricks, and brick to different radiuses for upwards of eight miles of sewers. Further particulars may be known on application to WILLIAM HENDERZIE, C.E., Borough Engineer, at his Offices, East Cross-street, Sunderland; to whom Tenders are to be sent on or before the 8th day of JULY, 1856, endorsed, "Tender for Bricks." The Corporation do not bind themselves to accept the lowest or any Tender.

By order,
WILLIAM SNOWBALL, Town Clerk.

BOROUGH of SUNDERLAND.—SEWERAGE WORKS.—CONTRACT No. 2.—To STONEWARE PIPE MANUFACTURERS and OTHERS. The Corporation of the Borough of Sunderland are desirous of receiving TENDERS for the manufacturing and delivering in a depôt within the Borough of Sunderland, the STONEWARE PIPES, Bends, Junctions, Invert Blocks, Junction Blocks, &c. necessary for carrying out the Sewerage Works of the borough. The works comprise the necessary pipe, bend, junctions, &c. for about 18½ miles of pipe sewers from 9 to 24 inches in diameter in the bore of private works, the necessary junction and invert blocks for eight miles of brick sewers, and other articles in stoneware which may be required in carrying out the said works. Further particulars may be known on application to WILLIAM CHEZIRE, C.E., Borough Engineer, at his Offices, East Cross-street, Sunderland; to whom Tenders are to be sent on or before the 8th day of JULY, 1856, endorsed "Tender for Stoneware Pipes." The Corporation do not bind themselves to accept the lowest or any Tender.

By order,
WILLIAM SNOWBALL, Town Clerk.

PARISH of ST. PANCRAS, in the County of MIDDLESEX.—DEPARTMENT of WORKS.—TO BUILDERS, SEWER CONTRACTORS, and OTHERS.—The Highways, Sewers, and Public Works Committee of the Vestry of the Parish of St. Pancras, in the county of Middlesex, will meet at the Office of the Department of Works, 19, Edward-street, Hampstead-road, on MONDAY, the 16th day of JUNE instant, at FOUR o'clock in the afternoon, to receive TENDERS from parties who may be willing to CONTRACT until Midsummer, 1857, for the execution of the GENERAL WORKS and REPAIRS to the SEWERS, GULLIES, DRAINS, &c. in the said parish, at, or under, or above a schedule of prices, which, together with the form of Tender and Contract may be purchased at the office of the Department of Works, 19, Edward-street, Hampstead-road, on and after WEDNESDAY, the 4th day of JUNE instant, between the hours of TEN and FOUR, up to the day and hour fixed to receive the Tenders. Sealed Tenders to be sent in, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of his Contract to the office of the Department of Works, by or before TWELVE o'clock at noon on the said MONDAY, the 16th day of JUNE instant. The Vestry do not bind themselves to accept the lowest or any Tender. No Tender will be received or accepted unless made out on one of the printed forms. Further particulars may be obtained on application to the Surveyor, at his Office, as under.

C. W. F. COOK, Vestry Clerk.

Department of Works, 19, Edward-street,
Hampstead-road, June, 1856.

ST. MARYLEBONE, May 31st, 1856.—CONTRACT for YORKSHIRE PAVING.—Notice is hereby given, that the Vestrymen of the parish of St. Marylebone, in the county of Middlesex, will meet in the Board-room of the Court-house of the said parish, on SATURDAY, the 14th day of JUNE, at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to contract for the SUPPLY of 24-INCH YORKSHIRE TWO-STRING, from the 2nd to the 14th day of JUNE to the 25th day of MARCH, 1857. Further particulars may be known, and forms of Tender procured from the Surveyor, Mr. ROBERT SEAGER, at the daily attendance at the Court-house, from TWELVE till ONE o'clock. All Tenders to be upon the printed form, and to be delivered, sealed up, before ELEVEN o'clock in the forenoon on said 14th day of JUNE, and no Tender will be received after the specified time. The Vestry do not pledge themselves to accept the lowest Tender. The Vestry will require the parties Tendering, or some person on their behalf, to be in attendance at the time of opening the Tenders. By order,

W. E. GREENWELL, Vestry Clerk.

EDMONTON LOCAL BOARD of HEALTH.—To CONTRACTORS, BUILDERS, and OTHERS.—Notice is hereby given that persons desirous of contracting to LAY an IRON GIRDER BRIDGE, and to work RETAINING WALLS, ABUTMENTS, &c. near the railway station, Wood-green, Edmonton, Middlesex, are requested to send in sealed PLANS for the execution of the said works on or before MONDAY, the 16th JUNE instant, endorsed, "Tenders for Wood-green Bridge," and addressed "To the Clerk of the Edmonton Local Board of Health, Edmonton." The plans, specifications, together with the form of Tender, can be inspected, and further particulars obtained, on and after WEDNESDAY, the 11th instant, upon application at the Office of Mr. GOSSET, Surveyor to the Board, Church-street, Lower Edmonton, between the hours of TEN and FOUR. The Board do not bind themselves to accept the lowest Tender. Security will be required for the due performance of the contract, and it is requested that the names, descriptions, and address of the proposed sureties be furnished with the Tender.—By order of the Board,

WILLIAM PULLEY, Clerk.

Edmonton, June 3rd, 1856.

TO IRON-FOUNDERS and CONTRACTORS.—LOUGHBOROUGH CEMETERY WORKS.—The Burial Board, for the Parish of Loughborough, in the county of Leicester, are desirous of receiving TENDERS for about 7 yards of CAST IRON FENCING, for enclosing the proposed Cemetery Ground at Loughborough aforesaid, including stays, rivets, screws, and bedding. The drawings and specifications may be seen at the Offices of the Architects, Messrs BELLAMY and HARDY, 10, Broad-st., Lincoln, on and after the 9th day of JUNE next, and on the 11th day of JUNE inclusive and the said drawings and specifications may be viewed on and after the 16th day of JUNE until the 21st day of JUNE inclusive, at the Offices of Messrs. HAWKSLEY TOOKE, Solicitors, Loughborough, where sealed Tenders are to be delivered, addressed to the Chairman of the Board not later than the Saturday of JUNE, endorsed "Tenders for Iron Fencing." The Board do not bind themselves to accept the lowest Tender. By Order,

W. H. TOOKE, Clerk to the Burial Board.

Loughborough, 4th June, 1856.

TO BUILDERS.—Persons desirous of TRACING for the ERECTION of WORKING EXCHANGE at St. Albans, Herts, can inspect the Plans and Specifications at the Offices of Mr. THOMAS WARD BLANDY, Solicitor and Clerk of the Peace, Offices, St. Albans, after the 14th day of JUNE instant and at my Offices, Derby, after the 18th day of JUNE instant. Tenders to be sent in not later than the 1st day of JULY.

JAMES NURSERY, Architect.

Priory-row, Coventry, June 4th, 1856.

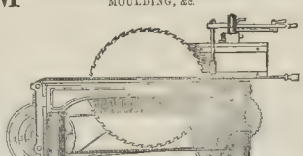
PARISH of ST. GILES, CAMBERWELL.—SEWER CONTRACTORS and OTHERS.—The Sewers and Sanitary Committee of this Parish will meet at the Vestry-Hall, Camberwell, on FRIDAY, the 13th day of JUNE instant, at SEVEN o'clock in the evening precisely, to receive TENDERS for the execution of the JOBBERS and GENERAL WORKS connected with the SEWERS in this parish. A Table will be required to be filled in the printed form provided, which can be obtained, with all necessary information, at the Surveyor's office, Vestry-Hall, Camberwell, on and after FRIDAY, the 6th inst. and between the hours of ELEVEN and THREE.—The committee do not bind themselves to accept the lowest or any Tender. All parties Tendering are to be in attendance at the time above named, or their Tenders will not be received.

C. W. MARSDEN, Vestry Clerk.

Vestry Hall, Camberwell, June 3, 1856.

CONTRACTS.

TO STONE MERCHANTS and OTHERS.—The Vestry of the Parish of Bermondsey, Surrey, will meet at the WORKHOUSE in Russell-street, in the said parish, on MONDAY, the 16th day of JUNE instant, at SIX o'clock in the Evening precisely, to receive TENDERS for the supply of TON of the best BLUE GUERNSEY GRANITE SPALLS, delivered (within a month) over side into barges, at Cherry Garden Pier, below Bridge, in the River Thames. The Vestry pay Dock brease and landing, and will also pay the freights if required. The weight of the stone is to be ascertained by the weighbridge at the parish depôt, and the contractor is to be bound by the certificate of the surveyor as to quantity and quality. The Vestry do not bind themselves to accept the lowest or any Tender.



GEO. R. DREW, Clerk.

Office of Works, Maltby-street, 4th June, 1856.

TO BUILDERS.—The COMMITTEE of the WALWORTH LITERARY INSTITUTION will meet at their READING ROOMS, No. 91, Manor-place, Walworth-Surrey, on the 19th INST., at NINE o'clock p.m. to receive TENDERS for ADDITIONS to be made to their LECTURE-HALL in Carter-street, Walworth. The plans, specifications, and conditions can be seen at the office of Mr. HENRY JARVIS, the Architect, 29, Trinity-square, Southwark. The Committee will not be bound to accept the lowest or any other Tender.

Dated June 2, 1856.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and COMPANY give notice that they have lately enlarged and improved their Premises to the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

HART AND SON,

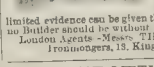
London.



HINGES, LOCKS, HANDLES, BOLTS, &c.

First-class Prize Medal, Paris Exhibition, 1855.

Specimens at the Hardware Court, Crystal Palace, Sydenham. Illustrated Price-catalogues post-free on application.

KIMBERLEY'S NEW PATENT FLOORING CRAMP continues to receive the patronage of one and all, of every leading Builder Engineer, and Architect, not only in England, but throughout the world. Its simplicity, power, and economy still remain unquestionable, even by the side of its most important rivals, and the steady, annual increase in its sale, is the best proof of it. It is useful in many ways as a cramp, and unlimited evidence can be given that it is a most valuable tool, which no Builder should be without.

London Agents—Messrs. THOMAS PUGH & CO. Wholesale Ironmongers, 13, King-street, Snow-hill, London.

THE BEST METHOD of CONSTRUCTING a ROOF for an EXHIBITION, or any other building, where a large amount of light is desirable.

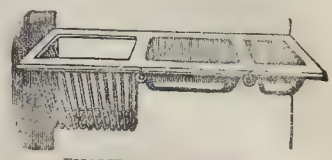
"TO THE EDITOR OF 'THE BUILDER.'

"SIR,—In your guidance in the Builder, 'Engineer,' at great length, lays down the disadvantages of the construction of the two Crystal Palaces. He says,—'There are defects (for building purposes) inherent in the materials, and these defective qualities no power can overcome nor remove.' I beg leave to differ with 'Engineer,' for I can overcome nor remove. My Registered System of Glazing Roofs *without Putty* on the curvature for expansion and contraction, having proved to be necessary; and had Sir Joseph Paxton, or Messrs. Fox and Henderson, applied my method, which was brought under their notice previous to the roof being commenced for the 'Pi' Palace, there would have been none of the numerous complaints of leakage, &c. one constantly hears of. I have some specimens of my method in the Exhibition, in Class 7, which were placed in an out-of-the-way place, *accidentally, of course!*

"I consider for the purpose of an exhibition, or in fact for any purpose in which a building requires erecting with great rapidity, no material is so suitable as iron and glass, *provided* it can be made weather proof, which was frequently urged under the

ST. PANCRAS IRONWORKS,

OLD ST. PANCRAS-ROAD, OPPOSITE THE OLD CHURCH, LONDON.



TO ARCHITECTS, ENGINEERS, BUILDERS, AND CONTRACTORS.

HER MAJESTY'S
ROYAL LETTERS PATENT.

OR IMPROVEMENTS IN THE CONSTRUCTION OF
CORRUGATED IRON BUILDINGS
AND ROOFS,
As erected for and approved of by Government.
FOR ENCLOSURES,
This Patent is as Strong, as Durable, and much Cheaper, than
BRICK WALLS,
And as Portable as HURDLES.

CASTINGS,
HEAVY AND LIGHT,
PLAIN AND ORNAMENTAL.

Patentees of the latest Improvements in Manger and Rack, and Manger, Rack and Water Trough, approved of by the
ROYAL VETERINARY COLLEGE
EVERY DESCRIPTION OF STABLE FURNITURE.

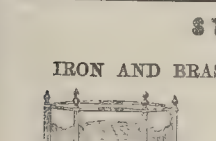
IRON ROOFING OF EVERY DESCRIPTION. CORRUGATED IRON, PLAIN OR GALVANIZED, AT PER CWT.
ESTIMATES BY POST, OR ON APPLICATION. PRICES EQUAL TO ALL COMPETITION.
☞ ADDRESS—THE MANAGER OF ST. PANCRAS IRON WORKS, OLD ST. PANCRAS-ROAD, LONDON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS
CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.
Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to
THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.
ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.
THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.
Many roofs covered with zinc thirty-five years ago have never required repairs.

A
FIRST-CLASS MEDAL
WAS AWARDED TO
F. EDWARDS, SON, and CO.
AT THE
PARIS EXHIBITION,
For the SPECIMENS they exhibited of
DR. ARNOTT'S
SMOKE-CONSUMING GRATE,
AND SMOKE-CONSUMING
COOKING APPARATUS.

F. EDWARDS, SON, and CO. beg to inform the public that their STOCK of GRATES is ENTIRELY REFORMED, and consists SOLELY of GRATES on the SMOKE-CONSUMING PRINCIPLE. A large variety in real Bronze, Ormolu, Steel, and Berlin Black, suitable for Drawing-rooms, Dining-rooms, and Libraries, from 7l. to 3l.



The following are the prices of those for ordinary use:—
Black Grates, for Parlours, Offices, &c. from 4l. to 2l. 10s.; for Bed-rooms, Offices, &c. from 2l. 10s.

By the Grates on this principle as properly constructed by F. Edwards, Son, and Co. smoky chimneys are avoided, an agreeable fire is maintained, with one-half the trouble attending the ordinary grate, and a saving of from forty to fifty per cent. is effected in the consumption of fuel.

PROSPECTUSES, WITH FULL PARTICULARS AND TESTIMONIALS, SENT ON APPLICATION.

TYERMAN'S PATENT HOOP-IRON BOND,
FOR BUILDING PURPOSES.
ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES
beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16 ..	1½ ..	7s. 0d.
15 ..	1⅝ ..	7s. 6d.
15 ..	1¾ ..	8s. 0d.
15 ..	2 ..	8s. 6d.
15 ..	2¼ ..	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11¼ inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent, that a direct end grain of the iron is presented longitudinally, and which become when built into the brick-work, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.
London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.
RAIN PIPES, &c.—F. A. TIDDEMAN and CO. ANDREW CLARK and COMPANY, PLUMBERS,
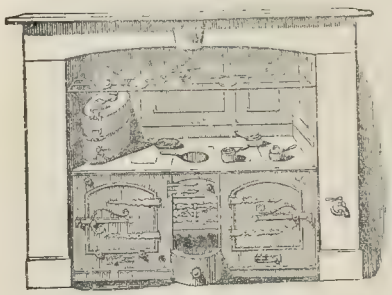
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture having Cottam's Patent Nozeles, Halter Guide and Collar-Rein attached, the rail of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable; promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use



Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking Patent Loose-Box Fittings, Cheap and Durable Corn-Bins,

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and japanned Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STEVENS and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

JOHN TANN'S new patent RELIANCE LOCK and FIREPROOF SAFES form the best and cheapest safe in the world against fire and robbery. Testimonials to be had of Messrs. Waterlow, Birchin-lane; at the Warehouse, 30, WALBROOK, CITY; and at the Works, 1, Hope-street, Hackney-road, London. Iron Doors for strong rooms and party-walls.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.

CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

WOODCOCK'S PATENT SMOKE-CONSUMER.—The above Patent has a reputation beyond all question: it prevents smoke, saves fuel, promotes a rapid and abundant generation of steam, is entirely self-acting, and of small cost. Ample references and testimonials. Furnaces built on scientific and economical principles, and repairs or annual contracts for the same taken.—W. WOODCOCK, Consulting Engineer for Furnaces, 12, Bishopsgate-street Within, London.

CAUTION.—Gardner's so called Patent is an infringement of the above, and all parties are hereby warned against its use.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of all.

Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 19, York-buildings, Adelphi.

IRON CHURCHES, STORES, &c.—For SALE, Substantial Corrugated Iron Stores, Churches, Dwelling-houses and every description of Buildings, adapted to all climates. Iron Roofs constructed for all parts of the world. An Iron Church with sittings for 750 people, for hire or sale.—To view and for further particulars apply to SAMUEL HEMMING, Cliff House Works, Bow, London.

ROYAL POLYTECHNIC GAS FIRE, BACHHOFFNER and DEFRIESS'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIESS'S Office, 143, Regent-street, London.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given.—J. TYLOR and SONS, Manufacturers, Warwick lane, Newgate-street, London.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 5½d. per inch, and upwards.

Register Stoves, 8d. 6d. 7d. 8d. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—

3 ft., 2l. 16s.; 3 ft. 6 in., 3l.; 4 ft., 3l. 15s.

3-feet Cottage Ranges, with ovens and back boilers, 32s. each.

3-feet self-acting ditto, ditto, 34s. each.

Air Bricks, 4s. per doz.

Best Town Glue, 50s. Ditto, Scotch, 64s. per cwt.

Best Fine Cut Clasp and Rose.

1½	1¾	2	2½	2¾	3-in. & larger.
10s. 6d.	12s. 6d.	13s. 6d.	15s. 6d.	18s.	14s. per cwt.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

TO ARCHITECTS, &c.—The IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most effectual yet invented, is made by T. SMITH, of 14, Queen-street, Oxford-street, near Argyll-street, where a working model can be seen or will be sent for inspection on the shortest notice.

N.B.—Espagnolette Bolts of a superior quality, at reduced prices.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

TUPPER and CARR, Patent Galvanized and Ungalvanized CORRUGATED IRON MANUFACTURERS, IRON ROOF, SHED, AND STORE BUILDERS, Electric Telegraph and Wire Fencing Contractors. Works—LIMEHOUSE and BIRMINGHAM. Offices—3, MANSION HOUSE PLACE, LONDON. Iron of every description galvanized

JOHN HENDERSON PORTER, ENGINEER AND CONTRACTOR, IRON BUILDING AND ROOFING WORKS, GAS-STREET, BIRMINGHAM.

LONDON OFFICE—1, RICHES-COURT, LIME-STREET.

TO ARCHITECTS, BUILDERS, AND THE TRADE. PATENT PLUMBIC ZINC. GREAT REDUCTION IN PRICE.

PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No. 11 gauge weighs about 18 oz. per foot super.				
12	"	"	20	"

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

BUILDERS! ARCHITECTS! and MASONS!—MARBLE.—The Italian Marble Company call the particular attention of Builders, Architects, Sculptors, and Masons to their PRESENT low prices, viz :—

Veins, in blocks of ordinary dimensions,	8s. 6d. per foot cube.
Sicilian "	6s. 6d. "

An inspection of their well-assorted stock is solicited, at "The Depôt," Bridge-wharf, Millbank, adjoining Vauxhall-bridge.—Apply to Mr. BAXTER, Wharf Foreman.

WILLIAM W. BONNIN, Secretary.

TO BUILDERS, MASONS, and CONTRACTORS.—OBSERVE! the CHEAPEST DEPOT in ENGLAND for MARBLE CHIMNEY-PIECES, of superior quality and workmanship, is the WESTMINSTER MARBLE COMPANY'S PATENT WORKS, Earl street, Holywell-street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold Vein and other Chimney-pieces, Tombs, Monumental Tablets, &c. is earnestly solicited. The Trade supplied with Slabs, &c. &c.

A WORKING FOREMAN WANTED.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Brèchia, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park spring, and other stone, in blocks, slabs, landings, and hearth-stones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

Lloyd's Marble Wharf, Thames-bank, Pimlico.
Adjoining Vauxhall-bridge.

ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

MARBLE and STONE CHIMNEYS.—150 MARBLE CHIMNEYS of various designs and colours, most of them fixed, are now on view at the Cambridge Heath Marble Sawing-Mills. The proprietor has again enlarged his workshops, and erected so much improved machinery, so as not only to compete, but is able to manufacture more, and consequently cheaper than any house in the trade.

The Trade supplied.

STONE!—To the TRADE.—The cheapest paces in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Scaffage Slab, Granite Pitching and Curb, Guernsey Broken Road Materials, and every other description of stone, at JOHN KNIGHT and SONS, Devon Wharf, Mile-end York tooled ragging, 3s. 6d. per 100 feet; slab for hes ths, 4d. per foot superficial; slab for chimney pieces, 4½d. per foot sup.; 8 by 3 window-sills, 6d. per foot run; 11 by 4 copings, 8d. per foot run; box chimnies (any opening), 8s. 6d. each. Terms cash on delivery.

TO CONTRACTORS AND OTHERS.

YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS: Horsehill, Robin Hood, Park Spring, and Gobin, in Blocks, Headways, or Slabs; Purbeck Paving, Slabs, Curbs, Rickstones, Pitchers, and Squares; Caithness Flags, Flestone, Newcastle and Bilston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c.; Derby Dale, Carr, Bramley Fall, Bath, Huddlestone, Park-wood, and other Block Stones. Valentia Slate Slabs, Bangor Slates, Cornish, Aberdeen, Guernsey, and other Granites; Mar le in Blocks and Slabs, imported from the Wharfs, Millbank-street, City Basin, and Deptford; also direct from the quarries by vessel or rail.—Address, FREEMAN'S WHARF, 27, Millbank street Westminster.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTLETON Freestone in blocks of any portable size, on a plan, to PRAS. and OCT. N. SIMPSON, Stamford. Specimens can be seen, and information obtained at the Offices of Messrs. PINDER, SIMPSON, and SONS, 29, Savile-row, Burlington-gardens, London.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER.

Marble of all kinds and of best quality, in block and slab. Mar le mortars &c.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace. Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

RAWDON-HILL STONE.—Messrs. TRICKETT and PERRIN are prepared to execute orders to any extent for their much admired Building Stone Depôts, where large stocks are kept No. 1, Stone-wharf, Great-Northern Railway Station, King's-cross; Victoria Stone-wharf, Millwall, Poplar. Blocks quarried to suit customers for columns, cornice, landings, steps, ledgers, f ead tones, cills, &c. Delivered to any part by vessel or railway trucks.

"This stone when better known, must come into extensive use; I should think it exceedingly suitable for the London market."

C. L. DIESSER, F.G.S.

Address, JOHN TRICKETT, Headingley, Leeds, Yorkshire; or, SAMUEL TRICKETT, Victoria-wharf, Isle of Dogs, London.

N.B. A large quantity of Foundation Landings for sale.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering heads, plinths, trusses, cills, corbels, imposts, cornices, copings, steps, staircases of all kinds, moulded or plain, square or spandril, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed or stowed, and delivered direct in one bottom by vessel or railway truck. Prices and every information given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone-wharf, Isle of Dogs, or to JOHN TRICKETT, Headingley, Leeds, York-hire.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 346, High-street, Southwark, near the Townhall.

YORKSHIRE STONE.

GEO. VINT and BROTHERS, IDLE, near LEEDS,

Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Ba h Stone Office, Corsham, Wilts.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, LONDON.

YORKSHIRE STONE.—THOMAS TILNEY, Stone Merchant, Tanfield-place, Leeds, begs to inform Builders, Surveyors, and Local Boards, that he can supply any quantity of stone from his Quarries, by water or railway. Paving, Landings, Steps, &c. got out to sizes, on the most advantageous terms. Prices sent on application.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material is handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immensurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of tea tables, chiffoniers, consoles &c.; baths, baptistries, altar-tablets, pil sters, columns, vases pedestals, and brackets; wash-hand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their S bstow supplies, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery Bethlem Hospital, various Lunatic Asylums, the Ordnance Works Model Prison, Pentonville, and other Penitentiaries, Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere road, where terms may be obtained.

WANTED, 2,500 SECOND-HAND COUNTESS SLATES; 75 feet run of 6-inch Glazed Drain-pipes; Twelve Stone Window-sills; Six Stone Chimney-pieces, with slabs for hearths complete; Two Veined Marble Chimney-pieces, of cutting about 3 feet square, with slabs complete; Twelve Stone Dog-testers; 100 feet run of 3-inch Zinc or Iron Guttering; 54 feet of 3-inch Zinc or Iron Rain-water Pipe; 36 feet of 6-inch Casting, with Two Gates and 1 Stone Curb complete.—To be delivered for cash at A. B. X. 3, Herring's Cottages, Dulwich, near the Alleyn's Head.

LANGOLLEN SLABS and SLATES. HOUSE CISTERNS, Sinks-tones, Filters, Larders, Mangers, Ridging, Skirting, and Rough Cores.

CISTERNS of LARGE DIMENSIONS for BREWERIES, DISTILLERIES, BLEACHING-HOUSES, and MANUFACTANKS.

Cattle-stalls, Pig-sties, and Troughs.

Paving for Railway Stations, Malt-houses, Breweries, Balconies, Conservatories, Warehouses, &c.

CHIMNEY-PIECES, Baths, Tom-stones, Pedestals, Washing-Tables, and every other Article of Slabwork, PLAIN or ENAMELLED.

Self-faced Flags for Barns, Outhouses, or Street Paving.

In Stock, Paddington, SEVERAL FINE SLABS of 70 SUPERFICIAL FEET each.

LLANGOLLEN FLAG AND SLATE COMPANY, 4, ENTFIELLIN WHARF, LLANGOLLEN, AND 4 WHARF, SOUTH WHARF-ROAD, PADDINGTON.

SLATES for SALE, by private contract, at prime cost. Builders, Slaters, Shippers, and the trade generally, are informed that the extensive Stock of Roofing Slates, at Penrhyn Wharf, Bermondsey-wall, Deptford, must be immediately realised, under the directions of the will of the late Mrs Catherine Brindley, deceased. The sale is now on.

JOSEPH BRINDLEY, Executor.

GREEN SLATE, the produce of the Tyn-y-Weryglodd Quarries, is acknowledged to be far superior to any hitherto used. Price and further particulars of the first quality, Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street; or to Mr. W. G. JENNINGS, Penygroes, near Carnarvon.

SLATE CISTERNS, SINKS, and every description of SLATE SLAB-WORK, ROOFING SLATES, or COVERING. T. B. HANNAFORD'S Price List (which can be had on application) will be found worthy of attention. Roofs covered within a four-mile circle, 9s. per square. Slate-paving, planed and squared, 1½ inch thick, 4d. per foot, super, stronger than three-inch York.—Trevalga Wharf, Ratcliff-cross.

Chairman WILLIAM LEE, Esq. M.P.

Every description of Life and Fire Assurance, Annuity and Endowment Business, transacted at the most moderate rates of premium. Fire Risks surveyed, and Estimates given without charge.

THOMAS CAVE, Managing Director.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

The Annual Meeting of the above Society was held in Edinburgh on the 9th of MAY. The year out by the Directors stated that the number of policies issued during the year ending 1st MARCH last was 836, the sums assured thereby being 293,806l.; and the annual premiums thereon, 9,126l.

The result of the investigation for the triennial division of profits was then announced. The surplus ascertained to have then amounted to 167,397l. which wholly belongs to the members, but of which one-third 61,274l. must, by the laws of the society, be set aside as a reserve for allocation at the next triennial division in 1859.

From the remaining two-thirds a Bonus was declared at the rate of 1l. per cent. per annum, on all policies on which six premiums had been paid, and only on the sums in the policies, but also on the former vested bonuses.

There was left, in addition to 61,274l. of reserve above stated, a surplus of 17,424l.; together, 74,698l. to go to the next division.

The Invested Funds of the society amount to £1,049,361
The Annual Revenue to 168,400
The Existing Assurances to 3,704,949

Copies of the report can be obtained at the Society's Head Office, 26, St. Andrew-square, Edinburgh; at the London Office, 126, Bishopsgate-street Within; and at any of the Agencies.

ROBERT CHRISTIE, Manager.
ARCHIBALD T. RITCHIE, London Agent.

PELICAN LIFE INSURANCE COMPANY, established in 1797.

Lady Grace, esq.	M. Wyvill, jun. esq. M.P.

The Company offers—
Complete Security—
Moderate Rates of Premium with Participation in Profits—
Low Rates with no Participation in Profits.

BONUS.—Four-fifths or Eighty per Cent. of the Profits are divided amongst the Policy holders.

LOANS in connexion with Life Assurance on approved security.

ANNUAL PREMIUM required for the Assurance of 100l. for the whole term of life:

Age.	Without Profits.	With Profits.	Age.	Without Profits.	With Profits.
15	£1 11 0	£1 15 0	40	£2 18 10	£3 6 6
20	1 13 10	1 19 3	50	4 0 9	4 10 7
30	2 4 6	2 10 4	60	6 1 0	6 7 4

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents.

ROBERT TUCKER, Secretary.

THE LONDON and WESTMINSTER BANK issues CIRCULAR NOTES of 10l. each, payable at every important place in Europe. These notes are issued without charge, as they are cashed abroad free of commission. The Bank also issues, free of charge, Letters of Credit on all the principal cities and towns in Europe. The Letters of Credit are issued only at the Head Office, in Lothbury. The Circular Notes may be obtained at the Head Office in Lothbury, or at any of the Branches, viz.

Westminster Branch, 1, St James's-square.
Bloomsbury ditto, 214, High Holborn.
Southwark ditto, 4, Wellington-street, Borough.
Eastern ditto, 87, Leadenhall-st. Whitechapel.
Marylebone ditto, 2, Strand-lane, Oxford-street.
Temple bar ditto, 217, Strand.

The rate of interest allowed on deposits of 50l. and upwards, at the Bank or any of its Branches, is now 3 per cent.

J. W. GILBART, General Manager.

RECENT WORKS ON THE FINE ARTS.

Now ready, 3rd edition, with 150 Illustrations, 2 vols. post 8vo, 30s.

HANDBOOK of PAINTING: THE ITALIAN SCHOOLS.

From the German of KUGLER.

Edited, with Notes, by Sir CHARLES EASTLAKE, R.A. President of the Royal Academy.

"By far the best manual we are acquainted with, for every one who, without the opportunity of foreign and particularly Italian travel, desires to make a real study of art. Its method, its chronological arrangement, and its generally judicious criticism make it most instructive to a learner."—*The Ecclesiastic.*

"Those who require a succinct compendium of the history of Italian painting, will find what they need in Kugler's Handbook of Painting, edited by Sir Charles Eastlake, with numerous and well-executed illustrations of the most celebrated paintings referred to in it."—*Murray's Handbook of Italy.*

II

HANDBOOK of ARCHITECTURE;

Being a Concise and Popular Account of the different Styles of Architecture prevailing in all Ages and all Countries.

By JAMES FERGUSSON.

With 850 Illustrations. 2 vols. 8vo. 36s.

"We needed a manual which should give us a succinct account of all the principal buildings of the world; which should be intelligible to the general reader, and yet informing to the professional artist; which should be profusely illustrated with specimens of all the styles known to have existed; and, when we find that it answers perfectly its intended purpose, we treat it as a valuable and welcome addition to our current literature."—*Times.*

"Mr. Fergusson's beautiful 'Illustrated Handbook of Architecture.'"—*Murray's Handbook of Italy.*

III.

HANDBOOK FOR YOUNG PAINTERS.

By C. R. LESLIE, R.A.

With Illustrations. Post 8vo. 10s. 6d.

"Mr. Leslie adds one more to the number of accomplished men, who, like Sir Joshua Reynolds, write as admirably as they paint. Though the title of his 'Handbook' might lead to the inference that it was only adapted for artists, it will be read with delight and instruction by every person who has any enjoyment in pictures."—*Quarterly Review.*

IV.

ART AND ARTISTS IN ENGLAND;

Being an Account of the Chief Collections of Paintings, Sculpture, Drawings, &c.

By Dr. WAAGEN,

Director of the Royal Gallery at Berlin.

3 vols. 8vo.

"The work before us we unhesitatingly pronounce to contain more of the essence of true connoisseurship than any other of the same class that has yet come before the public. Dr. Waagen's name is too familiar to the art-world to require any introduction."—*Quarterly Review.*

V.

THOMAS STOTHARD, R.A.

His Life and Personal Reminiscences.

By Mrs. BRAY.

With Portrait and Illustrations from his Chief Works.

Fcap. 4to. 21s.

"The illustrations, drawn with great care, are printed in a perfectly new style—in sepia—which gives them the effect of drawings. It is difficult at times to escape the conviction that the pencil of Stothard himself has been employed to adorn the volume. We have not opened a prettier volume."—*Times.*

"In Mrs. Bray the painter has found a suitable biographer, one who, with sufficient knowledge of art and literary taste, possesses a hearty enthusiasm for the subject of her memoir. It is a worthy monument to the memory of one whom we respect as a man and admire as an artist."—*Literary Gazette.*

VI.

BIOGRAPHICAL DICTIONARY of ITALIAN PAINTERS.

Edited by RALPH N. WORNUM.

With a Chart of Contemporary Schools.

Post. 8vo. 6s. 6d.

"As a portable compendium on Italian painters the traveller will find no work in a small space so useful as this; indeed, it may be considered as a necessary companion or supplement to the Handbooks of Italy. Except in rare cases, the artist even will find in it all the biographical details necessary for his purpose, with indications of the principal works of each painter, and a very clear view of the connection of the different Italian schools of painting with each other."—*Murray's Handbook of Italy.*

JOHN MURRAY, Albemarle-street.

LABARTE ON MEDIÆVAL ART.
Now ready, with 200 Illustrations, 8vo 18s.

AN ILLUSTRATED HANDBOOK of the ARTS of the MIDDLE AGES and RENAISSANCE, as applied to the Decoration of Furniture, Arms, Jewels, &c.
By M. JULES LABARTE.

"M. Labarte's manual is virtually a complete medieval history of ornamental sculpture painting, metal-work and pottery the history, indeed, of refined luxury. The illustrations are remarkable varied, representing every form of ecclesiastical furniture, of arms and armour, of crowns, thrones, and jewels, of cameos gold ta, vases, arms, and swords—even clocks and saddles. M. Labarte's work is of a standard character, and is, in all respects, a valuable addition to the library of art."—*Leader.*

"The composition of M. Labarte strikes us as evincing equal learning and intelligence. His knowledge is large, and he has the art of arranging it, with the systematic neatness of the French mind, in a clear and pleasing manner. The volume is illustrated with upwards of 200 wood engravings, representing some of the most remarkable examples in every style of art. As a broad view of the domestic arts of the Middle Ages, and an introduction to their particular study, this 'Handbook' will be found extremely useful and satisfactory."—*Press.*

JOHN MURRAY, Albemarle-street.

MR. HILLARD'S WORK ON ITALY.
Now ready, 2 vols. post 8vo 18s.

SIX MONTHS in ITALY.
By GEORGE S. HILLARD.

"A very remarkable work on Rome, &c entitled 'Six Months in Italy,' by Mr. Hillard, an American lawyer of great literary skill has appeared: its general will well repay the reader not only on the spot but at home after his return from his travel."—*Murray's Handbook of Rome*

"Mr. Hillard has published an excellent account of his impressions of Italy, bringing to the subject a rich store of classical knowledge, a graceful style, and a remarkable abstinence from any common place expressions."—*Edinburgh Witness.*

JOHN MURRAY, Albemarle-street.

MRS LOUDON'S GARDENING FOR LADIES.
Now ready, Fifth Edition, with Woodcuts, Post 8vo 10s 6d.

EVERY LADY HER OWN GARDENER: being Practical Instructions in Gardening, with a Calendar of Operations and Directions for Every Month in the Year
By Mrs. LOUDON.

JOHN MURRAY, Albemarle-street.

LOCKHART'S SPANISH BALLADS
Now ready, a New Illustrated Edition, with Portrait, many Woodcuts, Original Music, and Illuminated Title-page, 8vo.

ANCIENT SPANISH BALLADS, Historical and Romantic.
Translated, with Notes by the late JOHN GIBSON LOCKHART.
Also, Post 8vo, 6s.

A POPULAR EDITION of LOCKHART'S SPANISH BALLADS.

"Of the noble ballads he collected and adorned it is needless now to speak. Every generation, strong and delicate, and tender, will long contribute to the pleasure of all lovers of art and poetry. Until perverted taste or dulness shall have become dull and worse so, such a book is in no danger of losing its popularity."—*Examiner.*

"Few years have elapsed since first the Spanish Ballads appeared in the illustrated form which was their worthy due. Now we have a second issue of it, with a cheaper delivery of that in its kind unrivalled work, and in some instances the addition or substitution of still more exquisite specimens of that kind of lore than adorned any of the former ones."—*Spectator.*

JOHN MURRAY, Albemarle-street.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for JUNE, 1856, is now ready. Price 1s.

London: HENRY GEO. WARREN, 2, Red Lion-court, Fleet-street; and GEORGE ROUTLEDGE and CO., Farringdon-street.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, *Safe* Guide to the Valuation of all kind of Artificers' Work; with the Modern Practice of Measuring, and the Art of Taking Dimensions. Also, Forms of Agreement, Specification of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged for the Architect of eminence, assisted by several experienced Measuring Surveyors. Highly recommended by all Surveyors and Builders. Royal 8vo, price 16s in cloth.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL, Stationers' Hall-court; and all Booksellers

Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works.

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING, revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 30s.; containing upwards of 100 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the use of workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Grave stones for Cemeteries, &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of 100 Steel Plates, and numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the PRINCIPLES of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them in the purest style; including an Historical Description of the Architecture of Egypt, Greece, Rome, and Hindostan. Illustrated with upwards of One Hundred Engravings executed by Artists of first-rate talent, including numerous Diagrams &c. Twelve parts at 3s. or in 3 parts, 9s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Execution of Cottages and Villas. By S. H. BROOKS, Architect. Illustrated by 100 Engravings on steel, with Instructions for Working the Moulds, and Specifications of each Edifice. Twelve parts at 3s. or in boards, 36s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other Buildings for Public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 30s. in boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE containing a series of Designs for Decorating Apartments with taste, and every Information necessary for Practice. By R. WARE & A. ARROWSMITH, House Decorators to her Majesty. Ten Parts at 3s. or in boards, 30s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmony and Contrast, the Manufacture of Pigments, Oils, Varnishes, &c. By W. A. BROOKS. Illustrated with Coloured Specimens of Hand-brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 30s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Instruction in the Mechanical Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2000 Wood Engravings. By LUKE HERBERT, C.E. Engineer, &c. The rapid progress of Mechanical Science has [illegible] the [illegible] of the [illegible] since the first publication, in 1836, of the [illegible] work. The [illegible] and discoveries recently made have enhanced the [illegible] attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the omission of [illegible] articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo. volumes, cloth, lettered, price 36s.

COMPLETION
OF
THE TRAVELLER'S LIBRARY,

In Twenty-five Volumes, price Five Guineas, in cloth.

THE TRAVELLER'S LIBRARY being now complete, the Publishers call attention to this collection as well adapted for *Travellers* and *Emigrants*, for *School-room Libraries*, the *Libraries of Mechanics' Institutions*, *Young Men's Libraries*, the *Libraries of Ships*, and similar purposes. The separate volumes are suited for *School Prizes*, *Presents to Young People*, and for general instruction and entertainment.

The Series comprises fourteen of the most popular of Mr. Macaulay's *Essays*, and his *Speeches* on Parliamentary Reform.

The department of Travels contains some account of eight of the principal countries of Europe, as well as Travels in four districts of Africa, in four of America, and in three of Asia.

Madame Pfeiffer's *First Journey round the World* is included; and a general account of the *Australian Colonies*.

In Biography and History will be found Mr. Macaulay's Biographical Sketches of *Warren Hastings*, *Clive*, *Pitt*, *Walpole*, *Bacon*, and others; besides Memoirs of *Wellington*, *Turenne*, *F. Arago*, &c.; an Essay on the Life and Genius of *Thomas Fuller*, with Selections from his Writings, by Mr. Henry Rogers; and a history of the *Leipsic Campaign*, by Mr. Gleig,—which is the only separate account of this remarkable campaign.

Works of Fiction did not come within the plan of the TRAVELLER'S LIBRARY; but to Souvestre, *Confessions of a Working Man*, which is indeed a fiction founded on fact, has been included, and has been read with unusual interest by many of the working classes, for whose use it is especially recommended. Dumas' story of the *Maître-d'Armes*, though in form a work of fiction, gives a striking picture of an episode in the history of Russia.

Amongst the works on Science and Natural Philosophy, a general view of Creation is embodied in Dr. Kemp's *Natural History of Creation;* and in his *Indications of Instinct* remarkable facts in natural history are collected. Dr. Wilson has contributed a popular account of the *Electric Telegraph*. In the volumes on the *Coal-Fields*, and on the Tin and other Mining Districts of *Cornwall*, is given an account of the mineral wealth of England, the habits and manners of the miners, and the scenery of the surrounding country.

It only remains to add, that among the Miscellaneous Works are a Selection of the best Writings of the Rev. Sydney Smith; Lord Carlisle's *Lectures and Addresses;* an account of *Mormonism*, by the Rev. W. J. Conybeare; an exposition of *Railway* management and management, by Mr. Herbert Spencer; an account of the Origin and Practice of *Printing*, by Mr. Stark; and an account of *London*, by Mr. M'Culloch.

*** Two Lists of the TRAVELLER'S LIBRARY—I. Classified in 25 vols. price 5*l.* 5*s.* cloth; or 2. As originally issued in 102 Parts, 1*s.* each, forming 50 vols. 2*s.* 6*d.* each,—may be had of the Publishers and of all Booksellers.

LONDON: LONGMAN, BROWN, GREEN, AND LONGMANS.

The Builder.

VOL. XIV.—No. 696.

HOW often must the same thing be said before it will be attended to? Dr. Letheby, the City Medical Officer of Health, has recently reported to his commissioners on the condition of the houses in Plumtree-court, Holborn; and our morning contemporaries, struck with dismay, view the statement as if it had never been heard before, and write eloquent leaders on the hidden horrors thus unexpectedly brought to light!

Three years and more ago we described the very house in this very court, then as now the abode of disease, and the cradle of immorality and misery. How did the description run? "It was about two in the morning when we next wended our way to the valley of the Fleet, to visit some of the lodging-houses in that neighbourhood." . . "Leaving Field-lane, and crossing Holborn into Shoe-lane, opposite the wall of St. Andrew's Churchyard, you reach the entrance to Plumtree-court, which has long been the haunt of fever: this court extends a considerable distance towards Farringdon-street, when it goes off at right angles to Holborn: the court is very narrow and the drainage very imperfect. A sink at the bottom of this pestilent hole receives the greater part of the refuse of the place: it is often stopped, and then a pool of considerable extent is formed. Pulling the latch of the outer door of one of the houses here, and then entering, with the assent of its occupants, the room on the left, we found an atmosphere so stifling that we were forced for a moment to retreat. There were two beds in the room: in one, which seemed to have heads all round it, were no fewer than nine women and children. They were stored so oddly and so thickly, that it was not an easy matter to count them even by the strong light of the policeman's lantern. In the other bed were a man and a lad, and in a small room, or closet leading from this room, three other persons were sleeping. There was little ventilation. Had there been *none*, assuming that each respiration is forty cubic inches, the respirations twenty a minute, and that the existence of ·08ths. of carbonic acid is destructive, *the occupants of the front room must have died in eight hours!* Pondering on what we had seen, and weighing the possibility of improvement before the *infant-school* had done its work, we we were glad to make our way homeward, to freer air."*

This statement was reproduced and commented on in many journals, and was afterwards by us published in "London Shadows;" but no amelioration appears to have resulted, and now three years afterwards the metropolis hears the description with the same expressions of astonishment as before, admits the frightful evils to which such a state of things gives birth, lifts its hands—and will then probably forget all about it, as before. Let us hope, however, it will not be so.

"We arrived at the court," says the medical officer, "before the occupants were out of their beds, and the sickening odour which pervaded the lower rooms of most of the houses was almost overpowering. At No. 28, on the ground-floor, there was a small front room having an area of about 700 cubic feet, in which there were two wretched beds, from which five adults and four children had just arisen: behind this was another dark den, of 640 cubic feet in area, on the floor of which there were three heaps of rags, where two men, one woman, and two children were then lying. They were huddled together without the smallest regard to decency, and I was informed that they were chance lodgers. The landlord himself was one of the occupants of this miserable abode. The other rooms of the house were in a similarly wretched state, and for the accommodation of the many families which tenanted them there was but one watercloset, in a small back yard, which was so abominably filthy that I could not approach it. No. 6. The single room which formed the ground-floor had an area of 967 cubic feet. In this there were three beds lying on the floor, upon which two men, five women, and five children had been sleeping. In another small room, at the top of the house, there were two wretched families of six individuals, who had taken their night's rest upon a heap of shavings. The room was destitute of every article of furniture. At No. 9, which is a house of fifteen rooms, the largest of which is only 825 cubic feet, there were sixty-seven occupants, consisting of fourteen men, twenty-six women, and twenty-seven children. In two of the rooms the poor creatures were wholly destitute, and they were taking their rest upon the bare floor. This house was so overcrowded that the average cubic space per individual was only 175 cubic feet; in one room it was only 86¾ feet; and in another 93½ feet. No. 24, which is a small house of three stories in height, with four rooms, contained forty individuals, consisting of eighteen adults and twenty-two children. It has no back yard, and the ventilation is most imperfect."

The medical officer urged, as we have done for years past, that before we demolish those places in which the poor have hitherto lived, we should provide other and better places for their reception. While they are allowed to believe that crime, and disease, and wretchedness "are their inheritance, we can never expect to see them rising above their present miserable condition; nor can we ever hope to find that education, with all its power, can have any influence upon the minds of those who are too ready to receive the stronger and earlier impressions of vice. That which has already struck my attention during my visits to such localities as these, has been the fact that young children are, from their very infancy, made familiar with the worst scenes of dissipation and immorality; for to be kept in idleness, and to witness day by day the conduct of those who have no regard for the commonest decencies of life, is to insure another generation of criminals, whose habits may be even worse than those of their predecessors." He recommended that these houses should be at once subjected to the rules and regulations of common lodging-houses, and the commissioners adopted the recommendation, and ordered it to be acted on.

"Life," says Dr. Acland, "is a holy thing; and if communities throw away the lives of the individuals who compose them, or make these sickly, short, and miserable, the community will, in some manner, 'pay for it.' It will have work done badly by the crushed artisan while he lives; it will have to maintain him for years in his sickness, and his children on his death."*

We hope to hear before long that the Corporation have resolved to proceed with the erection of a pile of dwellings for the labouring classes, which has been long talked of. Some of the metropolitan parishes are becoming more and more overcrowded every day.

Let us in a parenthesis, by way of relief from the unpleasantness of the details we are forced to go into, here refer to the love of "art" which we find very often exhibited in the most miserable quarters, in the shape of plaster casts and little prints,—not of very refined character, it is true, but still agreeable and cheering as evidence of a striving upwards. The painted parrots and spotted cats, and red and blue varnished prints, which not many years ago *decorated* homes of greater pretence, have found a resting-place lower down in the social scale. Our sketch (see next page), an actual chimney-piece, will serve as a record of some well-known barbaric favourites.

We may safely anticipate that great benefits will result from the labours of the various Officers of Health, who have been appointed under the Metropolitan Management Act. We have before us a very satisfactory preliminary report from the medical officer of St. Leonard's, Shoreditch, Dr. Barnes, wherein he justly asserts that,—

"It is impossible to call into action such a well-devised sanitary administration as will effect material diminution in the rate of sickness and mortality in a district, which will not *pari passu* increase the value of the property, and lessen the burdens upon it. To communities, as well as to individuals, there is nothing so expensive, so fatal to prosperity, as sickness. To a productive and labouring community, such as that of Shoreditch, health is the chief estate. If we observe the analogy that exists between the welfare of an individual and the welfare of a community—and the analogy is so true that it is the basis of all sound political economy and good government—do we not find that in the case of sickness in an individual, if one organ is diseased, increased labour is thrown upon the rest, that the functions of all are disturbed and weakened, and that the whole system suffers? A community is but a system of individuals: if, therefore, one portion of that system be disabled by sickness, every other portion will feel the blow; the whole community will be taxed to support that part which is rendered incapable of supporting itself."

It is, as we have again and again said, a plain matter of self-interest, as well as a solemn obligation, to exercise the most vigilant care in preserving to the poor their only worldly possession—their health and capacity for self-support.

The area of Shoreditch comprises 646 statute acres, or about one square mile; and Dr. Barnes calculates that the entire population in 1745 was only 17,255, if so much. Let us see what it is now. By the census of 1831, the population was 68,564: in 1841, it had risen to 83,432; and in 1851, to 109,257. At the present time there are probably 125,000 persons crowded and compressed within the 646 acres comprised within the boundary of 1745.

The Report says:—"There is a constant and rapid flow of population into Shoreditch. It is in this circumstance that I see one of the most alarming dangers to the health of the district. The area does not enlarge, and yet, year after year, dense crowds of human beings, bringing with them other crowds of the living creatures that attach themselves to man, are packed and squeezed into that limited area. The most cursory glance into the courts and by-places of the district will satisfy us that the growth of the population has far outstripped the growth of the sanitary provisions necessary to provide for the accommodation and health of the masses pouring in. The progress in the construction of sewers, drains, the supply of water, the improvement of the dwellings, is, daily, more and more disproportionate to the necessities of the inhabitants. The causes of disease are therefore increasing at an accelerated ratio, and may at any moment assume an activity and a virulence beyond control."

What is the present sanitary condition of the district? In 1855, the total deaths registered in Shoreditch amounted to 2,985: of these, 639 were caused by typhus, smallpox, scarlatina, and other epidemic or endemic diseases. That is, one death in every five and two-thirds arose from causes directly traceable to removeable causes; and, from facts which have been made

* Vol. XI. p. 209.

* From "Health, Work, and Play," a valuable little tract just now published by J. H. and J. Parker, Oxford.

A Chimney-piece in Plumtree-court, Holborn.

manifest to Dr. Barnes, he is satisfied that the number of deaths referred to epidemics is very far from adequately expressing the destruction of human life, or the impairment of health, resulting from removable causes. Typhus—a disease really more terrible than the cholera itself, because it is ever insidiously at work sapping the strength of the community, is probably never absent from Shoreditch. It has made itself a home in the parish, where it lives—upon the life-blood of its hosts.

The death-rate in Shoreditch is very high,—there are annually twenty-eight deaths for every 1,000 persons living,—higher indeed than in any other metropolitan district. It must be Dr. Barnes's business to lower it, at any rate to the average which is about twenty-one in the 1,000. Even at that, however, it ought not to remain long. Our readers will remember that in the various houses which belong to the Society for Improving the Condition of the Labouring Classes, the deaths last year were only seven in the 1,000! Good encouragement indeed for perseverance! We understand that only one case of typhus fever has ever occurred in the society's buildings, and that in that instance the person was ill before he came there.

The medical officer of health at Kensington, Mr. Francis Godrich, sent in a report not long ago on the present condition of the Potteries, where the death-rate in 1848-9 was 60 in 1,000! the average age at death being but eleven years and seven months!! Mr. Godrich calls on the District Board as a first step to fill up the pool of stagnant water known as the "Ocean," described by us some time ago; and we earnestly hope this and his other recommendations will be forthwith attended to. If the whole population of London and its suburbs were placed in the same good condition as are the tenants of the society to which we have referred, thousands and tens of thousands of lives would be saved annually.

Thousands of lives! The fact is surely worth thinking over.

STATUES FOR THE NEW HOUSES OF PARLIAMENT.—Statues of Burke and Curran have been commissioned for St. Stephen's-hall, at the sum of 1,000*l.* each. Mr. Tneed is to execute Burke, and Mr. Carew, Curran.

ON THE VARIETIES OF STONE USED FOR ARCHITECTURAL CARVING.*

FORMERLY, the only economical mode of conveying ponderous blocks of stone to a considerable distance, was by sea or by navigable rivers. Canals were then introduced. Latterly the means of transport have been wonderfully increased by railway communication; therefore it becomes essential to ascertain whether better materials than those which have heretofore been employed in any given place, may not be obtained from other, although more distant localities, upon equally advantageous terms.

Before I attempt to describe the various qualities of stone used for architectural carving, the proper course of proceeding will be to give some idea of the different districts where stone quarries are generally found; and under what peculiar circumstances they are situated, with reference to their geological age and condition; or, in plainer language, before you can carve a stone, you should know where to look for one that is likely to suit your purpose.

It has been remarked by Dr. Buckland, in his "Bridgewater Treatise," that if a stranger, landing at the extremity of England, were to traverse Cornwall and the North of Devonshire, and, crossing to St. David's, should make the tour of North Wales, and passing thence through Cumberland to the south-western shore of Scotland, he would conclude from such a journey, that Britain was a thinly peopled, sterile region, whose inhabitants were principally miners and mountaineers.

Another foreigner, arriving on the coast of Devon, and crossing the Midland Counties, from the mouth of the Exe, to that of the Tyne, would find a continued succession of fertile hills and valleys, thickly overspread with towns and cities, crowded with a manufacturing population, whose industry is maintained by the coal with which the strata of these districts are abundantly interspersed.

A third foreigner might travel from the coast of Dorset to the coast of Yorkshire, over elevated plains of limestone, or of chalk, without a single mountain or mine, or coal-pit, or any important manufactory, and occupied by a population almost exclusively agricultural.

Let us suppose these three strangers to meet at the end of their journeys, and to compare their respective observations, how different would be the results to which each would have arrived, respecting the actual condition of England. The first would represent it as a thinly peopled region of barren mountains; the second, as a land of rich pastures, crowded with a flourishing population of manufacturers; the third, as a great cornfield, occupied by persons almost exclusively engaged in the pursuits of husbandry.

There is much truth in these remarks of Dr. Buckland; and it leads us to inquire into the cause of such very different occupations of the inhabitants.

Without travelling through the length and breadth of the land, we may take a general survey of England, by a glance at a geological map; by which we learn that the ground, a little beneath the vegetable soil, is composed of various sorts of rocks, arranged in stripes of different widths, which may readily be distinguished from each other by certain peculiarities. In England, these stripes take a general direction from north-east to south-west, and are somewhat parallel to the general line of hills. The origin, composition, order, and arrangement of these rocky masses, form the basis of geological science.

I shall endeavour to explain the outline of that part of the leading doctrines of geology as they are now generally admitted, which will be sufficient for our present purpose. In giving this outline, it is only to render my description of some of the principal stone districts more intelligible. If therefore some of my statements appear startling, and perhaps even improbable, as they are very likely to do, to those who come fresh to the consideration of the subject, they must either give me credit for advancing nothing but what is now admitted by men of science, as an established truth, or they must take the trouble to investigate the subject for themselves, and satisfy their doubts, by applying at the original sources of information.

In travelling along a line of railway, where there are occasionally deep cuttings, or if we notice high cliffs by the sea-side, we observe heaps of gravel, sand, clay, and different kinds of stone, to all appearance as if chance only had tossed them together in a confused heap. Yet amidst all this apparent confusion, geologists have discovered a certain degree of order prevailing; and that among these immense masses of rocks, broken and disturbed though they be, a regular succession is observed, which is nearly the same in all countries; and where their original position has undergone great subsequent disturbance, there still remain proofs of the order that once reigned. There are no conflicting laws in the material world; laws as fixed and immutable prevail in the disposition

* The substance of a lecture delivered by Mr. C. H. Smith, at the Architectural Museum, Canon-row, on Monday, the 26th May.

of rocks, as in all other of Nature's works. In fact, the same arrangement appears to be general, and must therefore depend upon general causes, which have on all occasions exerted the same influence from one extremity of the earth to the other. That which now appears to have been ordered for the wisest purposes, was, in ruder times, degraded by the misapplied title of "chaos."

There is much evidence to render it probable, that the entire materials of the great globe we inhabit, were at one time in a fluid state; and that the cause of this fluidity was heat. Upon cooling, the first result would be, the formation of various crystalline rocks of the granitic series, around an incandescent centre of melted matter. The gradations are innumerable which connect the infinite varieties of granite, porphyry, and basalt, with the lavas that are at this day ejected by volcanoes. This hypothesis is now admitted by the common consent of nearly all modern geologists and chemists.

Living, as each man does, but a comparatively short period, and seeing but a very small portion of the surface of the earth at any one time, it is somewhat difficult to conceive that the action of volcanoes and earthquakes can have had a general effect in changing the position of land and water. We occasionally hear of a volcanic eruption or an earthquake, and for the most part look upon it as something partial, confined to a certain district, and, on the whole, as unimportant to the rest of the world. There is, however, strong reason to believe that volcanoes and earthquakes are the operations of a power which is everywhere present beneath the ground, in which we all have an interest; and to which we must ascribe the circumstance of the land being raised above the waters, as well as the undulations of hill and dale. Such operations may have been more violent and extensive in earlier times than at present; although an apparently insignificant cause will produce a very surprising effect, if frequently repeated during a long succession of ages.

The first part in classification is the division of rocks into three great groups: the crystalline or igneous, sedimentary or aqueous, volcanic or lava, &c.

By heat, under great pressure, dark limestones, replete with shells and corals, may be converted into white statuary marble; and hard clays into slates of various kinds, all signs of organic remains having been obliterated; these are intermediate or altered rocks.

The very lowest sedimentary rocks, such as slate, contain no traces of inhabitants of the seas, in which they were accumulated; it is supposed that the heat during those periods must have been adverse to animal existence.

We are apt to regard the earthy foundation, on which the architect raises an edifice, as a specimen of duration and stability; but proofs of violent disturbances are conspicuous in every locality. All the materials of the sedimentary rocks appear to have been, originally, gradually deposited in nearly horizontal strata, at the bottom of the ocean, or at the bottom of inland seas, lakes, or estuaries. Thus formed, the collective heap remained in a state of perfect quiescence, while it became somewhat indurated into a mass. From the numerous contortions, and generally more or less inclined positions of strata in all countries, there cannot be a doubt of our islands and continents having been heaved up from the bed of the sea, by some violent terrestrial commotion, which has, in many cases, placed the rocks at a very considerable elevation above the waters. Many terrible convulsions have repeatedly broken up the surface of our earth, during which land and water have alternately been uppermost. England, Scotland, and Ireland have evidently undergone many submersions and elevations, before they rose from the mighty deep in their present natural condition. How long these surprising operations were in progress, or how many ages elapsed in a state of comparative tranquillity, between one terraqueous convulsion and another, is a question, among many more, which sets our researches at defiance; for conjectures are endless; even the labours of the wisest men afford but a glimmering light to direct us in tracing such wonders of Almighty power. But of this we are certain, that the solid earth may at one time form the depths over which the stormy billows wave, at another time may be elevated, and become dry land, where corn may wave, where the loveliest flowers may be organised and fructified, and the lofty patriarchs of the forest upheld for the nourishment and enjoyment of numerous tribes of the higher orders of animals. All is in a state of mutation. Nothing is more evident to geologists than a perpetual series of alterations; there can be discovered no vestige of a beginning, no prospect of an end.

The solid earth, which now appears above the surface of the sea, with its stores of organic remains, may be compared to a large collection of authentic records, that will reveal to man, whenever he may be capable of rightly interpreting it, a continued narrative of events, which commenced at a period indefinitely remote, and probably succeeded each other after intervals of vast duration. Unlike the records of human transactions, these are not liable to the suspicion of having been forged or mystified through intention or ignorance. In them we have neither to fear the dishonesty of artful statesmen, nor the blunders of unlettered and wearied transcribers. As the Nineveh marbles record the existence of a civilized people on the banks of the Tigris, in remote ages, so the shells entombed in solid stone, at the summit of the Alps and Pyrenees, attest that there was a time when the rocks of those mountains occupied the bottom of a sea that was peopled by numerous species of animals, differing in many respects from any which now exist.

As far as we know at present, granite is supposed to be the oldest or first formed of all rocks, and is generally considered to dip under, or to be found beneath every other formation; notwithstanding, it forms some of the most elevated mountain masses. In the British Isles, the oldest rocks, such as those of granite, slate, and certain varieties of marble, called "Mountain limestone," compose the highest eminences along the western part of our island, from Cornwall and Devonshire, great part of Wales, Cumberland, and the western portion of Scotland. The mountains of Snowdon and Skiddaw are composed of rocks very low in the series; whereas, the marsh lands of Lincolnshire, Cambridge, Essex, and many other parts on the eastern side of England, which are scarcely above the level of the sea, are composed chiefly of gravel, sand, clay, and the most recent geological formations.

Granite is generally considered to be a mixture of three substances, quartz, felspar, and mica, in various proportions. Occasionally, one or other of these bodies is altogether absent. Felspar colours the red granite, black mica the grey.

In speaking of sedimentary rocks, it is necessary first to show how such rocks were formed, or how stratification commenced. The solids of the globe,—granite, for instance,—cannot for a moment be exposed to water, or to atmospheric influence, without becoming liable to decompose and change their character and appearance. They instantly begin to wear down. This operation proceeded with as much certainty in earlier times as it does now, but probably upon a much more magnificent scale. The earliest stratified rocks contain no matters which are not to be found in the primitive granite. They are the same in material, but only changed into new forms and combinations.

Some rocks are composed almost exclusively of only one of the materials of granite; the mica schists, for example, of nothing but mica; the slates and clays of little else but decomposed felspars; and the sandstones almost wholly of quartz? Suppose that a river has a certain quantity of material suspended in its waters, it is evident that it will first deposit the largest and heaviest particles, and carry the lightest farthest on. To such a cause is it owing, that some of the materials of decomposed granite have settled in one place and some in another, and this wholly independent of chemical solution.

Granite is generally composed of coarse grains or crystals, of so hard and refractory a nature as to render it only suitable for those bold massive structures which have scarcely any minute-carved work. The statue of William IV. at London-bridge is of granite. For such a purpose granite is admirably adapted, and not likely to be stolen for the value of the material, as is the case with bronze.

In Cornwall and part of Devonshire the granite is remarkable for the superabundance of well-defined large crystals of white felspar which it contains. At the Earl of Morley's quarries, in the vicinity of Prince-town, Dartmoor, the granite is more or less decomposed to the depth of 30 or 40 feet. This surface granite has been much used, because it is cheapest; the result is, that in buildings, after some years, such as the Dartmoor Prison, each block of granite has become porous, absorbing moisture continually, and rendering the cells so damp that the walls have been covered on both sides with cement and tiles.*

If the felspar of the granite be removed by the process which I have described, a rapid disintegration of the quartz and mica must readily take place, leaving the quartz grains, or silicious sand and mica entirely separated from the clay and alkaline salts of the decomposed felspar. If sufficient time be allowed, the sand will ultimately become indurated into compact sandstone. This process of decomposition and partial induration must have gone on to an enormous extent, and continued through a vast period of ages, in order to have produced all the sandstone rocks which now constitute so large a portion of the earth's surface.

All sedimentary or aqueous rocks appear to have been formed either entirely under water or by frequent alternations of wet and dry. Sandstones frequently present a laminated structure, as if by the overflow and recession of a tide, which constantly left a sandy sediment, with minute plates of mica from the decomposed granite. These plates, being thin compared with their size, are almost invariably found with their flat surfaces parallel to the lamination; thus indicating the bed-way of a stone, by their presenting a spangled or glittering appearance when viewed in a direction to reflect the light; an effect not to be met with on viewing a surface across the strata.

There is one peculiarity in the sandstones which I think deserves notice, that is, the labour of converting them to decorative purposes: architectural ornaments, whether mouldings, carvings, or other decorations required to be well executed—particularly if on a small scale,—will unavoidably occupy much time if carved in sandstone, on account of the nature of the material, which is so destructive to edge-tools. In confirmation of this assertion, it is necessary to remark that the only material for sharpening edge-tools is sandstone, either as a hone or Turkey-stone used by joiners and cabinetmakers, grind-stone, scythe-stone, and many more, all of which are of a sharp sandy texture. Therefore, it is easy to conceive that the same kind of stone which is experimentally found to sharpen tools most expeditiously will also be the readiest to destroy their cutting edge, and thereby not only retard the progress of the workman, but occupy his time in frequently re-sharpening them. Quartz is one of the hardest substances in nature,—much harder than steel; therefore, instead of the chisels cutting the stone, the stone cuts the chisels, and a portion of the steel is left upon the stone after every blow. The actual effect of the tools on sandstone is to force the grains to separate from each other by concussion, for it is impossible to cut a hard substance with a comparatively soft instrument.

LIMESTONE.

The term limestone in its most extensive meaning, is one of the most abundant substances in the creation. Fish shells, corals of all kinds, and the remains of crustaceous animals, altered and modified in a thousand different ways, in the great laboratory of nature, constitute, almost exclusively, the calcareous rocks which form about an eighth part of the external crust of the globe. A minute fragment of chalk, of Portland or Bath stone, or of many varieties of marble, when highly magnified, presents unquestionable proofs of its having originated from the animated productions of the waters. Limestone

* Felspar is a decomposing substance. A few miles north of Plymouth the streams have a milky appearance. This produces clay for china and porcelain, to be seen at the Museum in Jermyn-street.

that is hard enough to receive a good polish is usually denominated "marble," although it may possess no chemical qualities but such as are common to all calcareous earths.

The oolitic rocks traverse England from the coast of Dorsetshire to the extremity of Yorkshire; in many places affording prodigious quantities of excellent stone, fit for buildings of the plainest, or of the most richly ornamented character; but variations of structure, hardness, and durability, are found in different quarries, tending to show the changeable nature of the subdivisions, even in short distances, throughout the entire district, which extends nearly 300 miles.

Some of the shelly varieties of limestone obtained from the oolitic series of rocks are amazingly durable for architectural works; but they are generally of too coarse a texture, and the shells interfere so as to prevent the possibility of minute carving being well executed in a material which is so varied in its texture; being hard and soft, close and open within the space of a few inches. The best kinds of shelly limestone are from Barnack, near Stamford, of which Peterborough Cathedral and many of the old Churches at Stamford are built; from Taynton, near Burford, of which the durable parts of the buildings at Oxford are constructed; Ham Hill, near Yeovil, used at most of the best buildings in that neighbourhood; and from Weldon in the wood, Northamptonshire, of which the oldest buildings at Cambridge are constructed: all these are merely varieties of the oolitic rocks.

Many quarries of excellent free working limestone are situated in the northern part of the oolitic district; such as the Ancaster and others in Lincolnshire, the Ketton in Rutlandshire, and many more; all of which are well suited for the carver. Most of these stones are rather soft, therefore may be expeditiously wrought into elaborate ornaments; and as they have been used in the neighbourhood of the quarries during several centuries, we can form an opinion of their fitness and durability. In Somersetshire and its vicinity there are almost inexhaustible quarries of oolite, very soft, therefore very expeditiously worked, consequently in great demand. Wells Cathedral is built with Doulting stone, which is similar in many respects to Bath, and is much decayed; whereas Glastonbury Abbey is said to have been built with stone from some of the Doulting quarries, and although 700 or 800 years old, is still in excellent preservation.

Bath stone is so well known that I need scarcely mention it. Large quantities continue to be used in buildings where present economy is more studied than future reputation. The principal quarries are at Box, Coombe Down, and Monckton Farleigh. The stone from each of these districts, and even in the same quarry, where there are generally a number of beds lying upon one another, is frequently found to differ, in some of the minor characters, from all the rest; such as being harder, coarser, more or less durable, &c. all of which are indiscriminately sold in the markets under the general name of "Bath stone," and it rarely happens that an architect specifies what kind of Bath stone is to be used. It is always understood that the materials are to be of the best kind; and it unfortunately too often happens that the stone which looks best when fresh from the workman's hand is frequently of a description most subject to premature decay. If it be left to the contractor's choice, he is sure to select the stone that may be most expeditiously worked.*

Portland stone is also a well-known material, and has been the chief stone used for ornamental architecture, not only in the south of England, but in many parts round the coasts of this country and Ireland, from the time of Inigo Jones to this day. The Banqueting-room or military chapel at Whitehall was begun in the year 1619, and finished in two years. As far as I can search or learn, this is the earliest building of magnitude constructed with Portland stone in London, or at a considerable distance from the quarries. If I call your attention to the beautiful carvings of fruit and flowers, of Corinthian capitals and statuary, about St. Paul's Cathedral, I feel assured you will require no further proof that Portland is decidedly one of the best free working stones that can be used for architectural carving. The whole of those decorations have been finished 150 years, some of them twenty or thirty years' longer; the greater part elevated above the surrounding buildings, and thereby exposed to all aspects, in an atmosphere charged with smoke and other impurities. Viewing this sacred structure collectively, it may be considered a satisfactory example of the fitness of Portland stone for such purposes; for although there may be symptoms of decayed stone in some few parts, the carved work generally may be said to be perfect, although sadly blackened with the smoke of the metropolis.

Caen stone has always been in great demand, because an immense amount of ornament may be executed for a comparatively small outlay. Wherever water-conveyance can be obtained, Caen stone is probably the cheapest stone that can be had for architectural decoration. It may be worked with great facility, perhaps more expeditiously than any other stone whatever; and it is quite immaterial as to the stones being placed in a building on their natural bed.

Caen stone, however, is not a durable material, and it is advisable to cover the projections with thin lead, to keep out the wet. There have been many ingenious plans for hardening the surface of soft stones, but they all want time to try their efficacy.

MAGNESIAN LIMESTONE.

Without a chemical test, some of the varieties of magnesian limestone might easily be mistaken for soft Portland stone, especially if they are of the same colour and partially oolitic. Two specimens, one from Cadeby, the other from Brodsworth, both in the neighbourhood of Doncaster, may be sawn dry with a common pegtoothed saw, and worked with a drag and tools the same as are generally used for soft stone; yet both these specimens have a large proportion of magnesia in their composition.

Time will not allow of describing the several varieties of Magnesian limestone, therefore, the few remarks which I have to offer, must be confined to the stone now being used at the new Houses of Parliament. Since the commencement of that magnificent work, notwithstanding an enormous quantity of stone has been obtained from the quarries, I do not perceive any material difference in its quality; occasionally slight variation may be found in the texture or hardness of some of the beds; but collectively, the produce of the quarries may be considered equal in quality to what it was at the commencement of the Parliament Houses. When first these quarries were opened, and for several years afterwards, only the eight uppermost beds were considered fit for the great work at Westminster; the stone underneath was imagined to be of too hard and coarse a texture, to be employed for superior architectural works. This idea was purely imaginary, for the number and thickness of the lower beds had not then been ascertained. Now and during the last few years, the whole of the beds, about thirteen in number, are worked, and to all appearance the quality of the stone is, with few exceptions, nearly the same in all of them; for there is no reason to suppose that generally the stone obtained from the lowest bed is not in every respect equal to that of the highest bed in the quarry. These thirteen beds compose the entire stata of Magnesian limestone to be found in the vicinity of North Anston; beneath them, after a few feet of different coloured clays, and thin rubble stone of an intermediate quality, we come at once upon beds of new red sandstone.

Since the introduction of Anston stone into the metropolis, the new material has been employed in several important edifices besides the palace of Westminster; and generally, if not invariably, has been considered satisfactory. One remarkable instance, however, is to be observed in the new buildings of Lincoln's-inn, where a large proportion of the masonry is already in a perishing condition. As sometimes happens, much useful information is obtained by searching into the cause of evident failure; therefore, at the quarries, I endeavoured to find out and examine the locality whence the objectionable stone had been obtained; and I was immediately taken by the foreman to the place, where I observed the hewn surface of the rock, especially the two uppermost beds, which had been left exposed to the weather several years, unequivocally in a state of rapid disintegration; the sharp arises and angles all rounded off, and the weathered surface for about a tenth of an inch deep, was easily abraided by the fingers: thus affording incontestable and striking evidence of the importance of avoiding the use of stone from these two particular beds, for ornamental architecture or sculptural purposes. For want of proper selection, a small quantity of this objectionable stone has been used at Westminster, but the proportional quantity is not more than might have been expected had any other stone been used.

I do not think that chemical analysis will render much assistance in determining the goodness of a stone for architectural purposes; the most accurate investigation of a chemist will give no certain test either of resistance to atmospheric influences or of rapid disintegration when exposed to weather. The same elements united in the same proportions, do not necessarily generate the same body. Common white chalk, Carrara marble, and many other varieties of limestone, when chemically examined, are all found to be composed of very nearly the same elements consolidated in the same relative quantities; yet we know they produce substances totally different in many respects. The precise causes of decay, or of duration in mineral bodies, such as building stones, are so complicated, that they often baffle our endeavours to represent them and their reactions by exact chemical formulæ. It is by some mysterious process of nature, which we do not at present understand, and generally cannot imitate; nevertheless, the visible distinction between durable and perishable stones may frequently be correctly ascertained, if diligently sought for.

A few hints to ascertain whether a given material is a sandstone, a limestone, or a magnesian limestone, may occasionally be useful to persons who may be in any way connected with the use of building stone. A very little chemical knowledge will show that there are extraordinary predilections amongst the atoms or molecules of substances, for each other's company; one will remain firmly combined with another till a third is introduced, when it will abandon its old companion and attach itself to a stranger. A fourth substance being added, the third will perhaps, leave the first and join the new comer.

C. H. SMITH.

* Henry VII.'s Chapel was repaired with Coombe Down stone between 1808 and 1822

FIRES AND FIRE-PROOF BUILDINGS.

THE paper on this subject by Mr. Braidwood, (p. 258, *ante*), led to a discussion at the Society of Arts, which extended over two evenings.

Mr. Sibley, in a note to the secretary, said—"I beg to adduce one fertile source of fires, that is, the fixing of the boiler furnaces of steam-engines, and other furnaces and close fires, against party walls, in which wood plates and bond timber are not unfrequently found. Under the Act of 1844, a clear space of six inches was made imperative, between the setting of the furnace and the party wall. Under the present Act they are subject to *no* restriction or regulation whatever. The disuse of bond timber and plates altogether; the introduction of iron hoop bond, and stone templates in their place; the building of cross walls, in lieu of hollow wood partitions, would tend much to diminish the hazard of fire. Wrought-iron brest-summer girders should also take the place of wood brest-summers: when these are burnt through, it is manifest that the whole superincumbent mass of brickwork has nothing for its support."

Mr. Chadwick, C.B., in the course of his address, said, after mentioning the time which usually elapses before the engines can be got to work at a fire, he was confident that practical concurrence would eventually be given to the conclusion at which he had arrived, that the principle of all future arrangements for the repression of fires must be a constant supply of water kept at high pressure, night as well as day, and the direct application of it from the mains before the door by means of a hose and jet. By that arrangement he had proved, that

a power equivalent to three or four of the best engines might be kept constantly before each door ready for application within two minutes. Having been consulted on the subject by Mr. Edward Rushton, the late benevolent stipendiary magistrate of Liverpool, and having learned of the corroborative example of the use of water direct from the mains, first for the cleansing of the streets and houses at Philadelphia, and then for the extinction of fires, he (Mr. Chadwick) gained his advocacy of the plan at Liverpool. When, upon his advice, Mr. Rushton proposed it to a Committee of the House of Commons, the proposal was received with laughter. The very serious effect of the conflagrations in the warehousing interests at last occasioned it to prevail in Liverpool, and, as had been stated that night, with such an effect in increased safety, as was shown in the insurance charges. In a communication to him, Mr. Newlands, the borough surveyor of Liverpool, had stated the new practice: "The mains from this reservoir under high pressure are available over the whole of the town." "On arriving at a fire the stand pipe or pipes are put down, and the hose run off the reels in an instant, and, it may be, a dozen jets are playing, and the flames nearly extinguished before the engines have left the yard." "Serious fires are now seldom heard of, for before the flames can gain head the jets can generally be played upon them, and this is the only time that there is a chance of subduing them." The mechanical or engineering objections made to the application of the like arrangements to the metropolis were wholly illusory. On a competent and impartial examination it would be found, that what had been done in some cities might be done with economy in the metropolis and all others. The present state of things—the combined prevalence of defective legislative and administrative as well as of engineering arrangements, in the face of proved available means of protection—the weakening of the unconscious action of natural interests in precaution by unguarded full insurance, in contravention of the established principles of insurance—the temptation to the commission of crime by the absence of proper means for its detection and prosecution—the daily occurrence of fires in the metropolis, the number of horrible deaths from them, as well as the loss of property which they occasioned—the apparent apathy with which such calamities were regarded, and the rapidity with which they were forgotten—were deeply to be lamented, and would hereafter be referred to as evidence of a very low social condition, and of defective administrative capacity and organization.

Mr. John Braithwaite claimed a little to himself, as being what was termed one of the earliest and oldest fire-eaters; for that was the designation, not within the last few years, but something more than a quarter of a century ago; and it was a matter of great surprise to him to know that the means (his steam fire-engine) which were then practically and successfully adopted and approved by the public—by the many thousands who witnessed the experiments then tried—that in all these matters, which were carried out at his individual expense, he was permitted to incur such an enormous outlay of money for the benefit of the community, without having received a sixpence in the shape of reward, directly or indirectly, from any one. In the early period of the building of Drury-lane Theatre, every possible means was adopted to prevent fire occurring, under his father's directions, in conjunction with Colonel Congreve and the late Mr. Whitbread. It was carried out to a perfection that was almost unheard of, or thought to be practicable. There was not a spot in any part of that theatre but that at one moment's notice they could control any chamber, however remote or however near, by—not a deluge of water, but sufficient water at a particular moment to arrest the progress of the flames. He was disposed to believe it was not to the interest of Fire Insurance Companies to put out fires! He had evidence beyond any doubt on this point, and the remark which Mr. Braidwood made about Legislative interference led him to think from that hour the Legislature would look more into these matters than they had done before—the only safeguard between the public and the Insurance Offices—for he must tell them that in 1830, under the special request and encouragement of the Insurance Offices, he constructed that which would not prevent fires, but would and did extinguish them most effectually, and that was the Steam Fire-Engine.

Mr. Hawes denied the charge which the last speaker had brought against the insurance offices of this metropolis.

Mr. Marrable said, in the Bill of 1844, and the present Building Act of 1855, several clauses had been introduced for the prevention of fire as much as possible, by disallowing the introduction of bond timber and wood bricks, and other regulations, and for arresting its progress by subdividing buildings by cross or party walls, when they exceeded, in cubical contents, a certain number of feet. He (Mr. Marrable) was not prepared to go quite as far as Mr. Braidwood in the regulations as to the distances at which it was now the law that all pipes for warming by hot water or steam should be fixed from any woodwork, viz. three inches. When high-pressure pipes were used, the precaution was wise and necessary; but he did not think there was any occasion for such a restriction when pipes for hot water at a low pressure only were used. He feared that such a rule might be found very difficult to carry out in all cases. He also dissented from the supposition that "a chemical action took place between heated iron and wood." He believed that the only action was, that the constant heat at last reduced the wood to a state resembling touchwood, which was ready to take fire on the slightest accident. With regard to the difficulty of enforcing the rules respecting the laying hearths free of all timberwork, it should be mentioned that the builders were bound to give notice to the district surveyors, whose business it was to enforce the rules of the Act.

Mr. F. Whishaw remarked, that when this subject was brought before the Institution of Civil Engineers, about four years ago, it was stated in the course of the discussion that as bulkheads were useful in preventing fires extending in ships, party walls should be adopted in large warehouses, so as to divide the space and confine the fire to the spot where it originated. That suggestion was approved of by Mr. Braidwood, and also by Professor Hosking, the late official referee. He was glad to find that Mr. Braidwood still held to that opinion, and it seemed to him that in any future Acts relating to building, clauses to that effect should be introduced. He knew a warehouse in Bermondsey with an unbroken area of wooden flooring of three quarters of an acre. There were also many large granaries which might be easily divided and fire prevented from extending. Mr. Braidwood seemed to think that the large buildings in the City had been constructed without reference to such precautions.

Mr. Charles Mayhew said, as he was surveyor to one of the oldest insurance companies, and a district surveyor, he could speak with some confidence on the subject brought forward by Mr. Braidwood. He begged, in the first instance, to reply to the observations made relative to the steam fire-engines. The reasons why they were not generally adopted on land was, that the large quantity of water which they could supply was not, in the generality of cases, required, inasmuch as water injudiciously applied, did, very often, more damage than the fire would if left to the judicious management of the fire brigade to extinguish, which was, in most cases, stopped in a way perfectly astonishing. As regarded the structure of buildings, he was quite persuaded that unless the Legislature would adopt strong measures, fires would continue as heretofore. Houses ought to be constructed on the French system, and not as they were built here, on purpose to burn. They were piled up as the wood was placed in a grate to light a fire. The floors were wood, the partitions were wood, the stairs were wood so put together as to be all hollow, and so connected as to allow air-drafts in every direction; and oftentimes the brick walls were what were called battened, allowing air-vents behind the plastering. Thus the house was on fire from top to bottom before it was known by the inmates that a fire had broken out, and the doors and windows in the surrounding walls allowed the admission of air to feed the flames. It was difficult, perhaps, to construct anything fireproof, but still it could be approximated to: it might, perhaps, be more costly so to build, but what was cost compared with loss of life? Speculating builders, however, would never adopt this manner of building, unless compelled by an Act of Parliament. With regard to the construction of warehouses, he did not think that anything would be effectual unless they were entirely constructed of brick, which would occupy too much room, and be exceedingly inconvenient. Therefore the only way was to confine them to a certain cubical content, as required by the present Act of Parliament. Another source of fires was using common flues for close fires: such flues were only enclosed by 4-inch brickwork, which was wholly inadequate. Another evil was using Welsh fire-lumps at the back of grates, which, if fixed close to the party-wall (especially in old houses, wherein timbers were almost invariably inserted), very often set fire to the adjoining houses.

Mr. J. W. Papworth assumed it would be agreed that what people called fireproof materials were literally the least protection in a great fire. Thus, stone staircases were likely to crack at the wall and fall, long before an equally solid wood staircase would be unsafe to the escaping occupier. Iron beams pulled the whole building down with them, whereas wooden beams, sadly charred, remained long after the engines had ceased working; and, in a great fire, even brick arches failed and fell. He admitted that very thick arches would stand a great heat; but the little things which were now called brick arches were impotent before even a moderate fire. A friend was saying last year, that he saw a brick-arched warehouse, belonging to his family at Liverpool, appear to melt down into the flames. Mr. Piper had observed that Yorkshire stone was exceedingly destructible by fire, and that, practically, it did not furnish a fireproof floor; but this did not appear to be Mr. Tite's opinion. And Mr. C. H. Smith considered that concrete, properly made, would bear a very considerable degree of heat, perhaps more than Yorkshire stone. Mr. Barrett had stated that, supposing any intense degree of heat to be generated, before it would act injuriously on iron and concrete, it would, probably, quite destroy a brick arch, either by disintegration, or by the arch's own expansion. Mr. Braidwood seemed to think that the only fireproof construction for large warehouses, where an intense degree of heat might be generated, was groined brick arching on brick piers. He (Mr. Papworth) accepted these discordant statements as evidence to one thing, viz. that none of them were fireproof in the ordinary sense of the word; and gave great credit to Mr. Braidwood for the distinction drawn between ordinarily fireproof, extraordinarily fireproof, and incombustible premises. The public had certainly been misled by the scientific acceptation of common terms. Fireproof did not mean incombustible, but only "not very likely to be totally destroyed by fire." Covering woodwork with metal was allowed by the insurance offices to be a prevention to a certain extent, that is to say, if a current of air passed between the hearth and the metal that touched the wood. A stone was equally a prevention under such circumstances, but he had seen a case where the hearth touched the stone: both the hearth and the stone had cracked—merely cracked—and the floor below took fire, with no current of air between the plate or stone and the hearth. By the late Building Act, any metal or other pipe or funnel for conveying smoke, heated air, or steam, ought not to have been placed nearer than 14 inches to any combustible material. But this had been constantly neglected; and in most cases the district surveyor had never known that work of the sort was being done; consequently, he could not be blamed for accidents. By the present Act, pipes for hot water must be 3 inches, for heated air or steam must be 6 inches, and for smoke or other products of combustion must be 9 inches from any combustible material; and no ventilation opening might be nearer than 12 inches to any combustible substance. Both Acts gave a penalty of 20*l.* if the work, although correctly done, had been executed without notice given to the

district surveyor; and the new Act added a penalty of 20*l.* a day after non-compliance in forty-eight hours with a notice from the district surveyor that he had discovered the fault. The new Act had provided against the future erection of such extensive buildings as Mr. Braidwood inveighed, very properly, against, under the name of Manchester or piece-goods warehouses; and now no warehouse or other building, wholly or in part for the purposes of trade or manufacture, was allowed to contain more than 216,000 cubic feet, which was quite large enough, for they would then be 100 feet by 40 feet by 50 feet, equal to five of the ordinary houses mentioned by Mr. Braidwood. In justice to a much-abused body of gentlemen, he must say, that architects, builders, and proprietors, did very frequently,—sometimes wilfully, sometimes ignorantly, sometimes carelessly,—defraud the district surveyor of his fee, by not giving him notice that work was to be done. On the other hand, the district surveyor trusted a good deal to the character of the tradesman employed, as well as to the good faith of the architect, if there was one concerned; but neither the district surveyor nor the master builder considered himself called upon to watch the action of the workmen, and it was here that the damage was done. Mr. Tite built a fire-proof Exchange with false windows in it: a bricklayer was engaged to build a flue, and made the wood frame of the sashes serve as one side of the flue, which took fire. Mr. Smirke built a wall across the roof of Covent-garden Theatre: *no one could tell who pulled it down, or when it disappeared.*

On the second evening, the secretary read a communication from Mr. Bridges Adams, which contained the following:—

"If the Legislature, deeming it right to guard human health from unwholesome buildings, as well as human life from dangerous buildings, should determine some day that all future buildings must be noncombustible, a great impulse will be given to the production of iron, brick, and stone, natural and artificial, and noncombustible buildings will come to be cheaper than combustible ones. They are, in fact, cheaper at present, if we take into account—insurance—doctors' bills—repairs—and inconveniences of all kinds; saying nothing of the process of being burned in bed, and the concomitant taxes for fire-escapes and other patch-work contrivances.

It is quite true that we cannot all at once get rid of our present dangerous buildings, but we can establish a principle, and, to a considerable extent, we can make it self-acting, by promoting the extension of non-combustible iron buildings in those situations where ground is costly, as in the City of London. For example;—Suppose a site 20 feet by 40 feet, and the four walls to be each 18 inches thick in brickwork, 20 per cent. of the area is lost, or about 170 feet out of 800 feet. If the walls be of double iron, and only 6 inches in thickness, the loss in area will be little over 6 per cent. or about 50 feet out of 800 feet, being a saving of 120 feet as compared with brick. If this be multiplied by five stories, we have a saving in space of 600 feet total, or nearly 67 square yards. When we think of the almost fabulous prices of City building sites, and multiply this result of one building by the whole of the buildings in the City, it is practically equivalent to the creation of so much new land—67 square yards on a base area of 89 yards.

This is a question very imperative for the consideration of the Metropolitan Board of Works, and the adoption of such a principle would give rise to new improvements in preserving iron from oxydation, and possibly to some new kind of compound metal, not subject to rust; at any rate, to a cheap and effective process of bituminising, as a substitute for the miserable wash of zinc called galvanising, which gradually disappears in a surface of red rust. The tin-plated roofs of Montreal and Quebec, flashing in the rays of the sun like a silver city of romance, are infinitely preferable to this. Tin is a metal not easily oxydised, and shelters the iron hermetically. Zinc being a metal easily oxydised, shelters the iron only by opposing its own substance to be devoured instead, as a kind of scapegoat. The oxydised zinc then rubs off, exposing a new surface, which is eaten in turn, till finally the iron is left exposed to the full action of the oxygen."

Professor Hosking, in a note to the secretary, referred to his book, written by him in 1847, entitled "Healthy Homes," and to an article in the *Encyclopædia Britannica*, on "Construction," written in 1854, as containing his views on the subject of Mr. Braidwood's paper. In this article a section is devoted to "Security of Buildings from Fire." The following passage explains how, in Mr. Hosking's opinion, dead heat may lead to the combustion of timber in buildings:—

"It is to be understood, at the same time, that a piece of wood will bear a powerful dead heat upon its sides for an indefinite period without igniting, unless a transverse section of the fibre, as at or around a live knot, or where a branch had been lopped, presents itself to the action. It is by the end that a piece of wood, exposed to powerful heat, most readily ignites. The gases evolved in the substance of the timber, by the action of heat applied to its surface, expanding as they are evolved, are thrown out by the pores among the fibres at their ends, if the ends are near enough to the action to allow of this effect, with less power than may be enough to obtain vent for the inflammable gases laterally."

Mr. Hosking added that, four years ago, he applied much of what he had advocated in respect of security from fire in buildings in a new compartment of Messrs. Clowes's printing-office, and that he is now applying the same system, more fully, perhaps, in Messrs. Berens and Co.'s large stack of buildings in Cannon-street.

In the course of the discussion, Mr. Baddeley, with reference to what Mr. Braidwood had stated, "that there appears to be some chemical action between heated iron and timber, by which fire is generated at a much lower temperature than is necessary to ignite timber under ordinary circumstances," said this fact was indisputable, but no satisfactory explanation of it had yet been given. The iron, chemically speaking, was by no means essential to the result, because it had been repeatedly observed that roasted bran, coffee, malt, and other vegetable substances, as well as coke, charcoal, and other matters, after being cooled down to such an extent as to be easily handled, had, when laid together in bulk, gradually increased in temperature, until they had eventually ignited. To this phenomenon he had given the name of the accumulative property of heat, but could offer no satisfactory explanation of its cause. Mr. Marrable, at the previous meeting, supposed that the timber was converted into "touch-wood" previous to ignition, but such was not the fact. The timber assimilated more to the character of charcoal, and ignition took place in these cases at a temperature much below the igniting point of either touch-wood or charcoal under ordinary circumstances. The greatest cause of fire was candles, upwards of 4,000 fires having been thus occasioned in London since 1832. But this might have been expected, seeing that candles were almost in universal employment. The next prolific cause of fire was flues, then gas, and under these three heads alone more than half the total number of fires would be found.

Mr. Robert Rawlinson remarked he felt satisfied that the water supply in London could be made as active as in Manchester or as in any lesser town. The question of extinction of fires was most important. It was one which, sooner or later, must engage the attention of the local governing bodies of the metropolis—and must involve an improved system of water supply. It appeared there was a dormant pressure of some 150 feet—that is, 150 feet head; but, by reason of friction and exhaustion, there was little or no active head. Water under the present system would not rise from the mains more than a few feet. It was a question well deserving consideration, as to whether some means could not be adopted to make the present mains answer the purposes required. "Head," or pressure, was lost by length of main, by bends, and by any obstruction causing friction. A length of parallel main might have 150 feet head at one end, and might only have a few feet of working or active pressure for fire purposes at the other end. By the erection of what he would call towers or reservoirs of equilibrium, a more even, regular, and effective pressure might be established. The capacities of pipes varied as the squares of their diameters, and their delivery about as the square root of the head, minus friction. Water would, under the most favourable circumstances, rise through the atmosphere in a jet to a height of about two-thirds the head; that is, from 135 feet head, a jet should rise 90 feet. Friction would reduce this. Mr. Beardmore, in his valuable hydraulic tables, detailed experiments with pipes under several conditions as to diameter, length of main, and head, giving the height of jet and volume of water discharged.

IN PRESTON,
From 6-inch main, head 110 feet.

	Height.	Discharge.
With 1 jet ¾ inch	57 feet	12·5 cubic feet.
„ 1 „	64 „	14·4 „

The first being during the day, the latter during the night.

IN LANCASTER,
From 8-inch main, head 225 feet.

With one jet an inch in diameter the water rose to a height of 140 feet.

With 100 feet of common hose of 3-inch diameter, the water rose to a height of 80 feet.

Before water could be available under pressure, there must be proper fire-cocks or hydrants. Force and volume of water might be obtained in the metropolis by a proper revision and improvement of the water mains and services.

Mr. Barrett observed, that Mr. Braidwood had stated in his paper, that *carefulness* was one of the best preservatives against fire, and no doubt he was right. He feared, however, that so long as we continued to construct the interiors of our houses of a material so inflammable as timber, so long should we have to regret the annual loss of a vast amount of property, and to deplore the still greater evil of a large destruction of human life. It was remarkable that with so subtle and insidious an enemy as fire to deal with, we should still continue to provide, in the construction of our buildings, that description of *food* which was best adapted to that enemy's devouring propensities. But so it was: we were wedded to custom, and it was exceedingly difficult to break through long-established habits. The construction of fire-proof buildings was a subject that had certainly not received that degree of attention which its importance merited. Until within a comparatively recent period, very little had been attempted in that way. Some few of our more important public buildings, some of the mansions of the nobility, occasionally a warehouse, and here and there a cotton, clothing, or silk mill, had been constructed upon a fire-proof principle, namely, that known as the iron girder and brick arch system; but this system was not adapted for domestic buildings, nor was it altogether free from objections. It had been well said that the arch *never sleeps*, it was always exerting a strain upon its supports, which required to be counteracted, and although it was customary to use tie or tension rods for the purpose of resisting this lateral strain, these rods were not always employed, nor when employed were they always successful, and occasionally accidents of a most serious nature had occurred in buildings constructed upon this plan. He could instance many of these, but would refer to only one, that of a large mill in the north of England, consisting of five stories. One of the arches in the upper floor of this building had settled, or sunk, and it became necessary to reconstruct it. In doing this, sufficient care had not been taken to strut or keep apart the girders upon which the arch was supported. They, in consequence, yielded to the lateral pressure of the adjoining arches, and the whole range of girders and arches gave way, and fell to the floor below. This floor also yielded to the mass of materials thus suddenly thrown upon it, and so on, in succession, every floor gave way, the entire building becoming almost instantaneously a mass of ruins, and killing twenty persons in its fall. This method of construction could not, therefore, be looked upon as free from objection, nor was it generally applicable. What was really wanted, he apprehended to be this—a method of construction that for all ordinary purposes should be practically fire-proof; one that should combine great *simplicity* of construction with *economy*, so as not to exceed, in any great degree, the cost of a building as generally constructed; and one that should at the same time be applicable to all descriptions of buildings, particularly to those of a domestic character. The system of fire-proof construction, which he had been for many years engaged in carrying out, he believed fulfilled all these conditions or requirements.

HOUSE DECORATIONS IN ENGLAND.

THE TAPESTRIES AND WALL PAINTINGS OF THE TIME OF HENRY THE EIGHTH, QUEEN ELIZABETH, &c.

IT is known that many of the tapestries and hangings of the interiors of English houses were manufactured in Spitalfields and the adjoining neighbourhood, even before the settlement of the French refugees in that district. At an ancient date the weavers formed one of the important City companies: indeed, it is asserted by some London historians, that this was the first incorporated society in the city of London. In the reign of Henry I. they paid 16*l.* to the Crown for their immunities, and eighteen marks annually. King John, in the year 1200, disfranchised them at the instance of the mayor and citizens of London; for which *favour* (as it is called) the citizens paid the king twenty marks per annum. This difference between the citizens and weavers probably arose from some bad practices of the latter, who, by virtue of a power granted by Henry II. in the thirty-first year of his reign, were put under the inspection of the chief magistrate of London; for, amongst other articles, the king ordained, "if any man made cloth of Spanish wool mixed with English wool, the portgrave, or chief magistrate, ought to burn it."*

In the seventh year of Henry IV. this company, which originally consisted of tapestry and cloth weavers, were reinstated with their freedom, and, by Act of Parliament, put under the management and authority of the Lord Mayor and aldermen of the City. The craft of the London weavers has now, however, been changed, by the discontinuance of the use of tapestry; and their skill is confined mainly to the manufacture of silk and velvets.†

Some opinion of the exquisite richness of the ancient works in cloth may be formed by an examination of the palls still preserved by several of the City companies, some of which were exhibited at the Society of Arts, and, together with other matters, displaying the skill of the Middle Ages. Some of these are of elaborate pattern, and composed of valuable materials.

In the fifteenth century, during the great festivals, the interior of the church of St. Jacques de la Boucherie, at Paris, the tower of which has been lately restored, was ornamented by a carpet representing scenes from the romance of "The Rose," and by another called "The Love of God and Old Age." On Christmas-day and other feasts, the subjects were changed.

In Hampton Court some of the tapestry was ancient, but very rich, the lights being all gold and the shadows of different coloured silk: here some of the tapestry represents Hercules and the Hydra, the story of Abraham, the Children carrying the Twelve Stones to the River Jordan, and also some subject illustrating English battles.

A century ago Windsor Castle was furnished with a considerable quantity of tapestry and other hand-wrought woven hangings. In the great dining-room the subject of the tapestry was the history of Hero and Leander. Some of the beds were hung with chintz, and the tapestry wrought in gold and silver. In the queen's presence-chamber the tapestry represented the history of the beheading of St. Paul and the persecution of the early Christians: the design and colouring of the tapestry were in this instance distributed over the roof by paintings of the figure of Queen Catherine attended by Religion, Prudence, and Fortitude, under a curtain spread by Time and supported by zephyrs, with figures sounding the happiness of Britain. Below, Justice was shown driving away Sedition, Envy, &c.; there were also some oil paintings in this room. In the queen's audience-chamber the ceiling was also decorated with allegorical figures. There was a canopy of fine English velvet set up by Queen Anne. The tapestry was made in Coblentz, in Germany, and presented to Henry VIII. For some of the other apartments the tapestry was procured by Charles II. from Brussels. A fashionable design at this time seems to have been the seasons of the year. Blue cloth embroidered with gold and silver was also much in use at this time; also green velvet embroidered with gold. In the queen's bed-chamber was a bed of state in rich flowered velvet, made at Spitalfields in the reign of Queen Anne. At about this time bed-chambers were hung with tapestry made in Spitalfields, of such subjects as "The Hay Harvest," Dutch wakes, &c.: the beds were hung with yellow and other coloured damask, and here and there were pictures of fruit, flowers, and such like subjects. An artist called Poyntz also executed tapestries of harvest fields, &c. at Spitalfields.

Wall painting in distemper had to a certain extent been a means of adorning English dwellings, but about the reign of Henry VIII. pictures of a more substantial kind began to form a feature in the decoration of domestic edifices. The works of Holbein,—such as the picture representing the granting of the charter to the Barber Surgeons, &c.—are well known. The famous picture of the meeting of Henry VIII. with Francis I. at the "Field of the Cloth of Gold," is such an important feature in the history of English art that it must not be passed over without notice. This picture, which possesses much merit, and is evidently a faithful representation of that important event, was at one time supposed to have been the work of Holbein, but although the portraits are all well executed, it is evidently the work of some other painter. On the occasion of this royal visit, Edward Hall, the recorder of London, was ordered by Henry VIII. to proceed to France and chronicle the event: from this account we gather some notion of the extravagant extent of the decorations in use at that period.

About the year 1459, one Sir John Fastolfe died, and the inventory of his goods gives us a great insight into the house furnishing of that time. This curious document is published in the *Archæologia*.

At a short distance east of Greenwich Hospital, stood, until within a short time, a characteristic specimen of the so-called Elizabethan domestic architecture. This house, with its "bow" windows quaintly glazed, the carved brackets, cornices, and other devices, had a pleasant look from the Thames, and led the thoughts of many to those bygone days when "Queen Bess" kept court at Christmas and other times in the palace of older date than the present. The interior of this house had been little interfered with: the staircase was of good proportion, and richly adorned with varied ornamentation of the time. There was, as is the case of the houses of this period generally, a judicious arrangement for lighting, which at most parts of the day caused broad lights or shadows. The walls were partly panelled, and unfortunately the rich-coloured oak was painted white: the dining-room, which, by its peculiar proportions, looked longer than it actually was, lighted by the bow-windows towards the Thames, was hung with tapestry of very choice colour and design. The mantelpiece was handsome, and the tapestry, without any addition of pictures, common trophies of the chase, or other matters, was quite sufficient to take away from any idea of bareness, or want of furnishing. The general colour of the tapestry was a deep greenish grey: the forest trees, reaching from the floor to the ceiling, were boldly drawn. Here and there were subdued tints of sky, hunters, and dogs; silver grey colours, on branches and varieties of foreground, and borders of scroll-work. The ceiling had been gilt, and delicately emblazoned; the windows, no doubt, partly filled with coloured glass. The modern Turkey carpet was a great improvement upon the rush-covered floors of other times; and the room, when we saw it, notwithstanding the introduction of some modern furniture, presented a picture of rare harmony. Some of the other rooms in this old house were also hung with tapestry, equally interesting. It was with regret when we went past one day, and found the bow-window, carvings, and tapestry all gone.

There are still some very large and elaborately-wrought tapestries hanging on the walls of the Governors' Room in the Charter-house. One of these shows the visit of the Queen of Sheba to Solomon. The grouping of this is excellent. The figure of the queen bears a strong resemblance to Mary Stuart, and observers of these matters suggest that King Solomon was intended to represent the unfortunate Howard, who came to his end in consequence of his attachment to the cause of the Queen of Scotland. The mantel-piece in this room is of great size, and elaborately wrought into panels, which are finely painted with various subjects.

About 1666, the famous Gobelin tapestry was established, under the protection of the French Government. Designs were prepared for these works by Raffaelle, and other Italian artists.

Portraits, generally of large size, and paintings, soon after the reign of Queen Elizabeth, began to displace the wrought hangings, and we find them in such places as the Guard-room of Lambeth Palace, hung side by side, in carved gilt frames, above the wood panelling, relieved by a stone-coloured tint.

After the disuse, in a great measure, of tapestry, distemper and other paintings came much into use, and had, no doubt, to a certain extent, a good effect on English art and taste.

The old apartments, staircase, and entrance-hall of the old British Museum were characteristic examples of the art decoration of several noble houses erected in England during the reigns of William III. and Queen Anne, and which consisted of paintings in dead colour, of subjects from the heathen mythology, Roman history, architectural devices, &c. many of which were also executed under the direction of Sir James Thornhill. The smoky atmosphere of London was sadly against this kind of ornament, which soon became dingy and indistinct. Many of our readers will remember the staircase of Montague House, when time, had turned the wall pictures to a dirty brown colour, which harmonized with the two decayed and shabby-looking giraffes which used to stand there. So indistinct had these works of art become, that it needed sharp eyes to discover that the paintings at the sides represented Cæsar and his military retinue, the chiefs of the provinces he had in part subdued attending upon him, and others on their knees imploring his assistance and protection. In one compartment were the feasts and sacrifices of Bacchus. In another, the rivers Nile and Tiber were represented by gigantic figures, emblematically ornamented, thrown out by a background of landscapes and pieces of classic architecture. On the ceiling were represented Phaeton, Phœbus, Diana, Juno, and other figures.

Further on Phaeton was shown driving the sun's chariot, accompanied by the hours in the form of women. Time was represented by Saturn; Eternity, by a female figure holding a serpent, near whom was Cybele, the goddess of the earth.

After the time of Queen Anne and George I. wall-hangings went out of use; and, amongst the wealthy, engraved prints and pictures served to some extent to supply their place. The effect of the distribution of engraved prints was of so much importance to English art and English house-furnishing, that we will reserve the subject for another paper, and meanwhile observe that about forty years since the houses of the traders and middle classes, particularly in the provinces, were chiefly coloured with simple washings of rose pink, whitening, &c. sized. Many of our readers will remember the whitewash mania which periodically seized the *woman kind* (as Mr. Oldbuck calls them): those of experience knew by certain hints when these vigorous operations were likely to take place, and endeavoured without effect to put off the day when the house would be upset from top to bottom.

At this time, in the houses inhabited by the class to whom we have referred, the pictures were of a very inferior description, consisting very often of rude sporting subjects, and coloured and plain engravings of battles by sea and land. In the dwellings of those not particularly tasteful, common prints were often framed by a sort of margin of the list torn off the edges of woollen cloth tacked to the walls. There were some pictures at this time, and for several years afterwards, greatly in use, and which were very showy, and in some cases very

* The dread of the importation into London of foreign labourers, manufacturers, and raw materials, expressed in the olden times, seems extraordinary at the present day.

† Some particulars of the Spitalfields weavers will be found in a previous volume of the *Builder*.

harmonious in colour. These often consisted of Scripture subjects, naval and military trophies supported by Nelson and Wellington, and an eruption of Mount Vesuvius. These are still to be met with in many houses, particularly in the country. These pictures, generally framed in black, were produced by transferring an impression from a copper plate on thin thin paper to glass plates, in the same way as designs are transferred to pottery. The outline and shadowing of the print is soon dried upon the glass, and then the colours mixed with oil or varnish are laid in their proper places. The great bulk of coloured prints at present in use are very indifferent.

INFORMATION FOR ENGINEERS.*

ONE day, some eighteen or twenty years ago the singular spectacle might be seen by the inhabitants of a certain inland town, of a ship progressing through the streets towards its own proper element. What combination of resources was required to get the novel freight to the nearest water-way; or how then to pass it over weirs, or through locks planned with reference to canal-boats, and to launch the vessel unstrained, in the Irish Channel, we are now unable to call to mind. The story, however, would mark the character of one of those tentative efforts which Mr. Fairbairn was making at Manchester, and which were consummated at his works at Millwall, in the construction of sea-going vessels of a class involving the largest dimensions,—the largest, at least, until, on the site of other achievements, rose the frame of a ship more gigantic than the works in naval architecture of the Egyptians,—indeed, a future very "Triton among the minnows." From the iron canal-boats that one used somewhat to wonder at, in the youth of our, and the country's, naval experience, down to the last forging link in this iron chain, how wonderful is not merely the material result, but the debt which is illustrated as due to science? Mr. Fairbairn *had* need to advocate the value of abstract science and theory,—for the hearing of a country or a government which leaves the investigations to the accidental conjunction of pecuniary means and inquiring spirit; but he had none, for the information of his northern *compatriotes*, to whom his own practical illustrations of the truth which he advances, are known in many departments of engineering construction touched upon in his lectures, other than iron-ship building. The experiments on hot and cold-blast iron; those of Mr. Hodgkinson, which determined the best form of section for iron beams; and others which extended our knowledge of the properties of materials,—not to mention what is due to Mr. Fairbairn in relation to the tubular-bridges and the available resources of wrought-iron rivetted girders,—are some of the things which are scarcely referred to in the volume before us, but of which the results could be quoted in aid of his argument.

The bulk of the work we are noticing, however, gives practical information on *several* subjects, in which the author's experience is of value. There is a little want of order and sequence as the subjects stand in the book itself,—perhaps resulting from the original arrangement for lectures. But matter is there, as interesting to architects as to mechanical engineers; and there will be no imputation on the score of putting it forward as "useful information." It is valuable occasionally in these days, to get *words* from him who has known something of *acts*.

The "lectures" relate primarily to the construction of boilers and to boiler explosions, as well as to the properties of steam; and also treat of the consumption and economy of fuel, and prevention of smoke, and of iron ship-building; and one lecture is "on the necessity of incorporating with the practice of the mechanical and industrial arts a knowledge of practical science," wherein the author adds his testimony as to the contrast which there still is between the educational institutions of other countries (such as the "Conservatoire des Arts et Métiers" at Paris) and those of this country; and wherein he gives a lucid sketch of the comparative state of the manufacturing industry of Lancashire during the last and present centuries, and shows that other branches of industry have increased in a ratio similar to the increase in the cotton manufacture. In England and Scotland generally, the weekly consumption of cotton is not under 31,500 bales. There are spun 50,000,000 miles of yarn per day, a length sufficient to circumscribe the globe two thousand times: and there are woven by 250,000 power-looms, 3,551 miles of cloth per day, equal to the distance between Liverpool and New York,—or forming an annual produce of cloth that would extend over a surface in a direct line, of 1,000,000 miles. On the score of love of nature and art, and some feeling about the gain derivable from these things also, we may be excused for a word of regret for "the secluded valleys, farmhouses, and neat cottages, the beauties of a Lancashire landscape of the last generation." Yet, we not only admit that the national prosperity is associated with facts as chiefly exemplified in a certain district: but *we* must necessarily feel interested in these facts,—dependant as is our own art upon the success of commerce. Such prosperity, however, is endangered by any character of attention to science not parallel with what obtains elsewhere. The great production and consumption above indicated, results from the fact of demand by the markets of the world; and the possession of these markets is precisely for those who can supply them in the best and cheapest manner. There may be nothing new in what we here state. But the conclusion requires to be acted upon. The value of abstract science, and of what is far too often depreciated as "theory," must be felt. Present wealth, and bull-headed strength can do much for the country; but there are resources of a more valuable description. Our professions require better educational systems. Our handicraftsmen would do their work all the better for some little insight into the *rationale* of their occupations. Do the ordinary building artizans achieve simple manual skill? Do bricklayers usually know how to lay bricks? Do house-painters, as a matter of course, know how to mix and lay colours. Mr. Fairbairn says,—

> "In my opinion, every one should be taught the rudiments and higher branches of their professions upon the same principles as barristers or physicians are taught,—and with this difference only, that no man should be ineligible to practise his profession whenever he finds himself competent to the discharge of its duties;—any enactment to the contrary would militate against the freedom of labour and the employment of capital, and if carried out, would paralyse the best interests of a manufacturing and commercial community."

The reference to the "Conservatoire," at Paris, and its school for persons destined to follow industrial occupations, came home to us in our special field. Amongst the subjects of instruction there are,—"Arithmetic, elementary geography, weights and measures, statics, descriptive geometry, stone-cutting, carpentry, cabinet-makers' work, perspective, mechanics, transmission of motion, hydro-dynamics, including descriptions of instruments of all kinds; designing—plain and ornamental; machinery, and architecture." But, besides this school, used by 300 students, there is another for similar objects, entitled "Ecole Centrale des Arts et Manufactures;" and hence, as Mr. Fairbairn remarks, "arises the superior knowledge" which in France "is brought to bear upon the useful arts."

Mr. Fairbairn has entered into the subject of the nature and properties of steam and other elastic fluids at considerable length; and he sets forth Mr. Joule's new theory of heat, with the nature of other investigations, as those of Regnault on saturated steam, which he says are likely to produce "important changes in the theory and construction of the steam-engine, as well as in the mechanical application of other elastic fluids." Such improvements have reference to the use of high-pressure steam in improved engines, "probably working from 150 to 200 lbs. on the square inch."

With regard to the construction of boilers: he gives rules for calculating the strength of cylindrical boilers, and particulars as to other forms. From the results of experiments to determine the effects of temperature, he infers "that the infusion of heat into metallic substances, such as cast and wrought iron, does not produce any serious diminution of their strength up to a temperature of 600 degrees." It is true, as stated by Mr. Braidwood, in his excellent paper,* that Mr. Fairbairn found a considerable diminution of strength up to a certain degree of heat in the more fluid or finer descriptions of iron; but in the harder and stronger descriptions, "there was nearly the same increase of strength up to 600 degrees."

The effect of rivets, Mr. Fairbairn some six years ago, demonstrated was to weaken the plates,—though the double rivetting is stronger than the single. Thus:—

Assuming the strength of the plate to be...	100
The strength of a double-rivetted joint would be, after allowing for the adhesion of the surfaces of the plate.....	70
And the strength of a single-rivetted joint	56

It had been contended by many boiler-makers that the rivetted joint was necessarily stronger than the plate.

Respecting the forms of boilers, he says that the haycock, hemispherical, and waggon shapes, should be "entirely exploded,"—since "they are all bad as respects their powers of resistance." The cylindrical form with hemispherical ends, is best for strength: but there are particular advantages in favour of the cylindrical form with two internal flues. The latter form also is recommended, because it admits of alternate firing, which itself is advantageous in regard to perfect combustion and diminution of smoke. In this form, flat ends will be necessary; and these should be stiffened by gusset pieces, internally, in preference to stay bars.

If boilers were properly constructed, there would be no difficulty, and much greater economy, in employing a pressure of steam, greatly exceeding that of 5 to 20 lbs. on the square inch as adopted in manufactories. This leads to the consideration of the causes of explosions. It is to be regretted that the evidence in such cases is necessarily defective. Still it appears to Mr. Fairbairn, that many of the explanations which have been lately given, are without foundation. He classes the causes of explosions under the following heads:—

1st. Boiler explosions arising from accumulated internal pressure.
2nd. Explosions from deficiency of water.
3rd. Explosions produced from collapse.
4th. Explosions from defective construction.
5th. Explosions arising from mismanagement or ignorance.

It is clear, however, that the last head would include the chief of the others; whilst there is a cause mentioned by the author, to which considerable importance should be attached, namely, incrustation of the boiler. Incrustation, as from salt-water, is not only a serious inconvenience as regards the duration of the boiler and the economy of fuel, but it is otherwise dangerous. The deposit being an imperfect conductor, the metal may become heated even to a red-heat; and the difference of expansibility between the two substances may then lead to a separation; when the water rushing to fill the interval would generate a large quantity of highly elastic steam, and thus endanger the security of the boiler. Culpable neglect, however, appears to be the most fertile cause; for, as Mr. Fairbairn says:—

"In nine cases out of ten, a continuous increasing pressure of steam, without the means of escape, is probably the immediate cause of explosion; in some instances it arises from deficiency of water; but accidents of this kind are comparatively few in number, as we often find, in tracing the causes, that they have their origin in undue pressure, emanating from progressive accumulation of steam of great pressure and density." The construction and efficiency of the safety-valve are therefore of the greatest importance. Mr. Fairbairn has figured a form of the apparatus, which could not easily be tampered with. But the super-

* Useful Information for Engineers; being a Series of Lectures delivered to the Working Engineers of Yorkshire and Lancashire; together with a Series of Appendices, constituting the results of experiments to inquire into the strength of materials, the causes of boiler explosions, &c. By William Fairbairn, F.R.S. F.G.S. &c. London: Longman and Co.

* See p. 350, *ante*.

vision of none other than a properly trained and steady engineer is indispensable. The opinion that explosions occur from the production of *hydrogen gas*, our author believes to be erroneous. Gas indeed might be produced by the sudden introduction of a small quantity of pure water, in the case of a new boiler; but explosion would not even then occur without the presence of atmospheric air or oxygen, and of flame or a substance heated to a very high degree. Mr. Fairbairn concludes, that "we have no foundation for such a theory, nor have we the least shadow of evidence to prove the presence of hydrogen gas in a boiler." The sudden introduction of water upon incandescent plates is, however, dangerous, from the generation of highly elastic steam; and it may be doubted whether the ordinary safety-valves are fully adequate to its escape. The danger of explosions (if they may be so called) from collapse, appears to be chiefly involved in the use of the internal flues.

It is clear from Mr. Fairbairn's statements, that boiler-explosions, which are now so frequent, might generally be prevented. In the Manchester district there is an association for the prevention of such explosions, and for effecting economy in the raising and use of steam. Inspectors are appointed, and the results of the examinations are preserved.

Mr. Fairbairn's lectures on the consumption of fuel, concentration of heat, and prevention of smoke are interesting as the observations of one to whose particular professional qualifications is added the results derived from the experiments of Mr. Henry Houldsworth at Manchester, and others. In the procurement and employment of heat, there have to be considered:—

1st. The quality and properties of the fuel used.

2nd. Its treatment in the furnace, and the supply of air requisite for its combustion.

3rd. The form of boilers, and the extent of their absorbent surfaces.

4th. The concentration and economy of heat.

And, lastly, the prevention of smoke.

On all these points the author's suggestions may be perused with advantage,—though, as to prevention of smoke, after all, the opinion that more depends upon the manner of firing, than upon mere proportion of openings and grate-bars, receives corroboration.

Mr. Fairbairn, as might be expected, is an advocate for the advantages of iron as a material for ship-building, especially in regard to its greater security and durability. Indeed, though unable to rebut the evidence of the experiments as to the effect of shot upon ordinary metal plates, he seems quite indisposed to consider the results as ultimate. We find no reference to the recently constructed mortar-vessels, in which thicker plates were employed. The apprehension about oxidation, he says, has been greatly exaggerated; "for it is with iron ships, as with iron rails; when in constant use, there is little, if any appearance of oxidation." The point as to tubular bridges we do not find noticed.

It is to be regretted that some few of the tables will be at first rather puzzling to readers,—on account of errors of the press. Where tens of thousands of pounds are intended, the insertion of a decimal point makes the numbers read as tens; and in the table of Rondolet and Hodgkinson's results, a 0, moreover, is omitted, for the bewilderment of the previously not too well informed reader. But where similar figures appear in the appendix, they are given correctly.

At the end of the book are a number of useful appendices, partly reprinted from Mr. Fairbairn's papers, in the "Philosophical Transactions," and which refer to the strength of wrought-iron plates, to that of plates rivetted, to the strength of locomotive and other boilers; to particular explosions, and the means of prevention; and which contain also reports relative to the smoke nuisance, and other subjects. There are also *formulæ* for calculating the strength of plate girders, which Mr. Tate has contributed.

The work leads us to hope that extended results of Mr. Fairbairn's varied and great experience may one day be given to the world. We cordially recommend the book as instructive and valuable to a far larger class than that for the benefit of which the lectures were prepared. It is a significant fact, and one worthy of the consideration of all interested in the success of London institutions, that these lectures could be given to popular audiences.

CHURCH-BUILDING NEWS.

Peterborough.—We are asked to make it clear that the architect, under whose superintendence the new church here is being carried out, is Mr. E. Ellis, of London, while the builders are Messrs. Ellis and Son, of Peterborough.

Lincoln.—The erection, in the new cemetery, of a public monument to the officers and private soldiers of Lincolnshire who fell in the late war, is suggested in the local *Chronicle*.

Lynn.—The consecration of the new cemetery took place on Monday before last. The grounds have been laid out so as to form a promenade for the inhabitants of the town. The two chapels, connected by an archway supporting a spire; the curator's house and offices, and the reception-house for bodies, are all in the Gothic style, faced with flints and dressed with stone.

Pyrton.—The parish church of Pyrton, Oxfordshire, which has been rebuilt and enlarged, was consecrated on 24th ult. by the bishop of the diocese. The building is faced with grey flint, hammered and laid in courses, and has frequent buttresses, free-stone ashen-work, and decorated windows, high-pitched roof of stained tiles, and a bell-turret rising 8 feet, and carrying three old bells. The architect was Mr. J. H. Buckler, of Oxford. The old porch—drawn in "Skelton's Oxfordshire"—through which John Hampden and his bride, Elizabeth Symeon, of Pyrton Manor-house, passed to the altar—still stands, and is refaced with flint: all else is entirely rebuilt; but the Norman doorway and Norman chancel-arch, with the two Norman windows in the chancel, have been re-erected. The deal roof has principals every 6 feet boarded and stained. The seats, all open, and so far copies from the old ones, are of oak, with some open carved work in the chancel. The aisles are floored with Minton's red and black tiles. The stoves are underground. The church will hold 300, nearly double the old church. It has been rebuilt—the nave at a cost of nearly 1,450*l.* The chancel has been rebuilt at a cost of above 400*l.* borne jointly by the dean and chapter of Christ Church, Oxford, and the earl of Macclesfield, their lessee.

Bucknell (Oxon).—The chancel of this well-known Early English church has just undergone a renovation, under Mr. White, and the windows have been filled with glass quarries by Mr. Lavers, from the designs of the architect. The builders employed were Messrs. Coney. The nave, also, has undergone repair, under the direction of the *churchwardens*, who have taken off the plastering, and replaced it with "stucco, jointed like stone."

Shepton Mallet.—The consecration of the Shepton Mallet cemetery took place on Monday before last. The cemetery is situate in Cow-street, and comprises about four acres. It is surrounded by a stone wall, and an iron-wire fence divides the part allotted for the use of the church from that of the Dissenters. The entrance is from the new road. There are two chapels built alike, from designs by Messrs. Wainwrights and Heard. The contractors were Messrs. Fudge and Gould. The cemetery was opened for interment on the 1st of June.

Edgbaston (Birmingham).—A vestry meeting of the parishioners of Edgbaston was held on Thursday before last, to take steps for the enlargement of the parish church. Mr. J. F. Ledsam, proposed, as an amendment, that it would be preferable to erect an additional church in the parish. This amendment, however, not being approved of by the meeting, the necessary resolutions for the enlargement of the existing church were carried. It is proposed to erect an additional aisle on the side of the church nearest to the park. Plans and specifications have been prepared by Mr. Fiddian, the architect, and the work will be commenced without delay. A considerable portion of the necessary expense has been already raised by voluntary subscriptions.

Rushall.—The re-opening of Rushall Church, near Walsall, took place on Thursday in week before last. The old building has been entirely taken down except the tower, and a new church, much larger, has been erected on the site. The present edifice consists of a nave, 53 feet long, and 24 feet wide, with a height to the summit of the open roof of 39 feet. Including the chancel (21 feet) and the tower, the total length, from east to west, is 95 feet. The old church had only one transept, to the south. Another has been added, to the north, giving the church the form of a cross, the extreme width across the transepts being 65 feet. The building is in the early English style. The exterior is of limestone with dressings of Hollington stone. The interior is fitted up with framed seats of deal, varnished. The edifice has been erected from designs by Mr. James Cranston, of Birmingham, architect, by Mr. I. Highway, of Walsall, builder. The building will seat 413 persons, and half the sittings are free. The funds have been furnished by voluntary contributions. The total cost will amount to about 1,600*l.* Mr. Highway, the contractor, added a stone plinth, not in his contract, as a gift to the church.

Rawtenstall (Manchester).—Some fifteen years ago, a Methodist chapel was erected in this village, with sittings to accommodate 1,200 persons, at a cost of from four to five thousand pounds; but sectional differences having arisen amongst that body, "the Old Wesleyan Methodists," there have been erected here since, places of worship for the Association Methodists, Primitive Methodists, Unitarians, and the Church of England; and on 16th ultimo, the foundation-stone for a new "Methodist Free Church," was laid by Mrs. D. Whitehead. The building is to be 78 feet long by 54 feet wide, exclusive of the portico, and in the Corinthian style of architecture, from stone procured in the neighbourhood. Mr. Robinson, of this place, is the architect; and Mr. Walter Sidley, of Ashton-under-Line, is the contractor for the whole of the works (exclusive of the painting, ironwork, gas-fittings, and heating apparatus), for the sum of 3,900*l.*

Burnley.—The cemetery for Burnley was consecrated on Saturday before last. The whole area of the ground purchased by the local commissioners is 18 acres; but the portion at present enclosed is 12 acres. The ground is divided into three allotments—6 acres being allowed to the Church of England, 4 acres to the Dissenters, and 2 acres to the Roman Catholics. On each of these plots there is a chapel. The architect was Mr. Thomas Worthington, of Manchester. The grounds are being laid out, and the plants and shrubs supplied by Mr. Stansfield, of Todmorden; and the whole of the works have been under the superintendence of Mr. J. Brierley, surveyor to the commissioners. The grounds were to be opened for interment on 1st inst.

Leeds.—The lower portion of the great west window of the parish church is being fitted with stained glass, by Mr. Evans, of Shrewsbury, who about fifteen years since supplied the stained glass of the upper portion of the same window. There are six openings in the window, and the two centres are occupied with two groups,—the baptism of our Saviour, and Christ blessing little children.

Sheffield.—The foundation stone of a new church at Belfield has been laid. The site of the new church (St. Stephen's) is on an eminence a few yards from Belfield House. The general form of the edifice is that of a cross (without aisles), with central tower, 24 feet square, and 80 feet in height. The style is early decorated English. The length internally, from east to west, will be 95 feet, and the breadth across the transepts 68 feet 6 inches. The contractor for the masonry is Mr. James Powell; for carpentry, Messrs. Dutton and Heald: the architects are Messrs. Flockton and Son. There will be accommodation for about 500 adults and 150 children. The whole expenditure will be met by Mr. Henry Wilson, of Westbrooke, snuff manufacturer. The entire cost of land and building is estimated at upwards of 4,000*l.*

THE NEW DISTRICT CHURCH OF ST. ANDREW, LAMBETH.

THIS church is arranged with a nave and north and south aisle, a ritual chancel extending to the second bay of the arcading, and a tower at the west end of the north aisle.

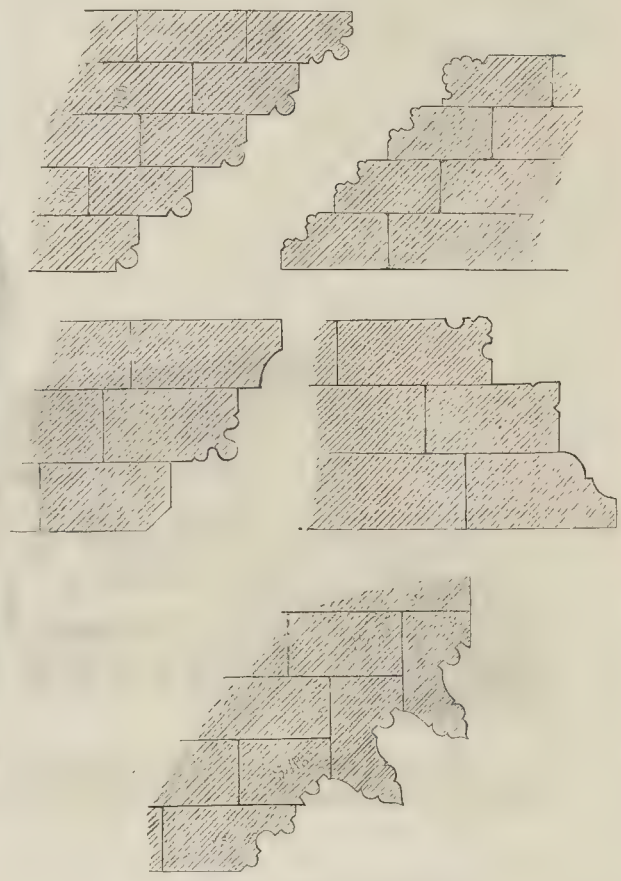
Its construction is of brick, both externally and internally. The exterior is built with common grey stock bricks, with bands of grey-stone: the jambs of windows and doors, and the discharging arches, are also all of bricks, the arches being set with alternated voussoirs of red and grey brick, and the stone window-frames and tracery standing in a deep reveal: the gables have their raking sides constructed in dovetailings instead of horizontal courses, thus (A); the tympanums being occupied with circles and reversed triangles (B), constructionally formed with red bricks. The tower, which is gabled on its four sides, has each tympanum also occupied by three circles and triangles, with cinque foliated lights, also in red bricks. From the apices of these gables rises an octangular timber spire; the exterior covering of which is of slate, in two colours, laid in bands, and other pattern.

The interior (independent of the shafts of the arcading) is of brick, in two colours, constructionally arranged. The general colour is that of the white Suffolk brick, diapered or banded, and otherwise varied with red. The general walls are banded with two courses of red to five of white. The spandrils of the arches have circles and reversed triangles in red. The chancel is worked in a diapered pattern, thus (C), with the voussoirs of the window arches alternately red and white.

The parclose, dividing off the vestry at the east end of the north aisle, is of brick, in two colours, terminating in a tracery of brick and brick cornice. The reredos consists of an arcade of seven trefoil-headed arches, constructed of brick, resting upon shafts of lizard serpentine, with carved caps and bases of stone. The spandrils have carved medallions in circles of brick. Above is a horizontal band of encaustic work, capped with a brick cornice, and stone coping. The arcading will contain the Decalogue, &c. inscribed upon rolls of tin. The bricks adopted are red, and black, and a few white.

The font is banded with encaustic work.

The object of this construction has been reality of application of material in constructive decoration. Its cost, independent of galleries (which are designed to be chiefly of iron, with a screen-work of floriated wrought-iron, by Skidmore, and spiral staircases of similar design), is 5,600*l.*; and it will accommodate, with the galleries, 1,100 persons. Its total cost (independent of gas and stoves) is 5,989*l.* The height of the spire is 150 feet. Mr. S. S. Teulon is the architect.



The annexed sections of brick mouldings from churches in Germany, are from the First Quarterly Report for 1855-6 of the Incorporated Society for Promoting the Building, &c. of Churches and Chapels, which also contains, as do previous reports, some observations on the use of brick in churches.*

BRICK ARCHITECTURE.

A. B. C.

Details: St. Andrew's, Lambeth.

Brick Mouldings, from Churches in Germany.

THE ILLUMINATIONS.

THERE are few days of national commemoration in England. The retention of two of the number—the 5th of November, and the 29th of May—is not due to grateful regard for the memory of certain kings of the house of Stuart. The annual ovation in fireworks, and the suspension of the leafy oak-bough, like some other customs, have survived the original significance. This year, however, the coruscations of gunpowder, and the festival of a 29th of May, were united in celebration of another starting-point, which the Royal Academy have well chosen to hail on their catalogue, as auspicious for artists. Soon may we write—

"Rich industry sits smiling on the plains,
Though "PEACE and plenty" may not tell
"A *Stuart* reigns."

For our own art, the value of international peace is obvious, spite of the inference which might otherwise be drawn from the history of certain countries, as history is written. Not long ago, we compared the appearance of London during the war with France, with its altered condition some few years after; and whether the progress during forty years has been worthy of the nation, or not, it may be noted that some of the chief undertakings in London street architecture date from the close of a long and costly war. In one respect forty years have not been misused; and in the knowledge of styles of architecture and principles, our architects surely are able to begin the peaceful victories of 1856, and leave a monumental London to mark the present reign, as the literature of the poet's day does the name of the "Stuart" queen.

What architecture now lacks is not so much professional skill, as discerning and discriminating patronage,—not patronage of the eleemosynary sort,—but that rarest of all things, the ability in those called *employers*

* The last report of the society states, "that in the year ending 31st March, 1856, the number of grants made was 100, viz.:—

For building churches	27
,, Rebuilding ditto	16
,, Enlarging &c. ditto	57

The amount granted was 10,903*l.* This is a smaller amount than in any year during the last nine years. . . . . The total cost of the works proposed is 122,55*l.* The number of additional seats to be obtained is 20,670, including 17,242 for the use of the poorer inhabitants, of which 5,156 are to be reserved for children. The committee have also to state that in the course of the year the society has paid 181 grants, amounting to 15,127*l.* to places at which works undertaken with aid offered in former years had been completed. The additional seats secured with this assistance are 28,525, including 25,204 for the use of the poorer inhabitants.

The new churches completed in the course of the year are 32
Churches rebuilt 29
Ditto enlarged, &c. 60
121."

ST. ANDREW'S DISTRICT CHURCH, LAMBETH.—MR. S. S. TEULON, ARCHITECT.

or *patrons*, to discover where it is that merit and capacity are in waiting, and how best to use these—without, by departmental and official restrictions, and unworthy suspicions, damping the flame of *art-spirit*. Treat the British architect as one following the calling of *artist*,—as one whose business it is to be something in addition to a skilful constructor, and a supervisor of accounts,—assume, moreover, that he is not necessarily otherwise than yourselves,—a man of honour and gentlemanly feeling,—and do not haggle about the reward which you give for learning and professional qualifications,—and we doubt not he will respond to your appeal.

Truly, however, are we compelled to say, that by the Government such progress towards good national architecture and grand public works, was not inaugurated on Thursday, the 29th of May, 1856. What was done in the way of fireworks, indeed, was successful; for we have never seen greater beauty of colour than that displayed for nearly two hours on the night of the commemoration. But in the illumination, the Government standard of art was of the lowest order. The public offices—"imposing," certainly—in taste were beaten by clubs, companies, theatres, city buildings, and even by shops and private houses. Some of the houses, indeed, with chandeliers lighted, and candelabra in the windows, succeeded in producing an effect which, though by simple means, was both novel and tasteful. Seldom had an Asmodeus so good a chance of seeing what of art there is in people's abodes,—and for us, the critical survey was not wholly valueless. What, however, could be expected from the manner in which the Government ordered their part of the display? We are told, and the statement is borne out by what was said by one of the ministers, that things were directed to be done *as on former occasions*. That is to say, the precedent of the most signally tasteless periods of British art was to be unreasoningly followed. Were there no artist-architects in all London, to whom could have been entrusted the designs, and the direction of lamp-men and gas-men? Surely, no such artists could have been engaged,—or they were restricted in such manner as led to little difference of result. It was the show of one night,—it was a mere illumination; but no Government can set to work a thousand or so of artizans on *any* old precedent, for any object, without doing them, themselves, the public eye and taste, and as an ultimate result, the national credit and position, a positive, though possibly a not immediately perceptible, injury. We are making no peculiar claims as to the power and office of *art*, which we might well do in such a case, at another time. It is fatal to everything that concerns the nation,—this going back, in any particular. It is pernicious, or rather destructive, to *mind*.

Somehow, in things connected with architecture, the country is always working *under* the mark of existing professional ability. For everything that is set up to deface our streets, the influential part of the public press is ready to discredit "our architects," who have so far, as the nearly invariable rule, had no voice in the matter.

We doubt not there is many an artist amongst us, who, with proper time allotted, would have displayed taste in the illuminations. Could the valuable library of the Government's own Department of Art suggest nothing which might have been improved upon? Was the Department ever spoken with upon the subject? Are the differences of scale between parts of the same design; the Brobdignagian crowns, and painted-tin flags, and the vile drawing and modelling of the various devices, to be taken as the result of expenditure on art of late years. Moreover, if we may ask questions at the Circumlocution Office, we *want to know* what is meant by Government illuminations of buildings. We confess (only of course our opinion goes for nothing against the Barnacles') that to us the intention should seem to be simply to *illuminate* the buildings. At Rome, they light up the church of St. Peter by small lamps following the lines of the architecture. The same thing was tried one year at the Travellers' Club. It was sparingly attempted at the Horse Guards. The most effective application of light for ordinary illuminations, is that which has been made by Sir Charles Barry, at the Reform and Travellers' Clubs,—and which Mr. Sydney Smirke appears to have followed out at the Carlton Club. At least, it follows that several modes of lighting up the architecture of a building might be devised,—productive of an effect far superior to that gained in the chief of the Government offices by the lamp-man's designs. Why, in the inauguration of Peace, was the noble architecture of St. Paul's left in darkness? Why was Trafalgar-square left barren? Why was no attempt made to combine the beauty of light with the rich decoration of the Houses of Parliament? And why were the steeples and columns of the metropolis equally unattended to? It appears to us that much better effect might have been produced by some of the means referred to, than by the plan of covering the fronts of buildings with screens and scaffoldings. Boards, poles, and pipes there were by day; and there were tasteless devices by night,—at least where these could be lighted. The *architecture* was screened off. *Lucus a non lucendo*. Surely there was dead wall somewhere in the town, that might have answered the Government purpose,—and left enough light in their rooms, to see the colour of red tape, by day.

The principle adopted in the lighting at Hyde-park corner was entirely different to that which we have noticed, and here the architecture appeared to good effect; and the bas-relief at the top was beautifully defined. We imagine that the buildings in the City were better managed; but it was not possible to get there from the other end of the town, and the newspapers give us little information. The Mansion-house, under Mr. Bunning's hands, no doubt did credit to the City for better judgment on such occasions; the Royal Exchange had lamps twined spirally round the columns, and its illuminated pediment must have appeared very beautiful; the India House also had its lights disposed in architectonic character, the pediment having scroll work, and festoons ran along the whole upper part of the *façade*. Whilst, in the western part of London, the very home of art—the National Gallery—was far from satisfactory. Some of the transparencies exhibited, as those by Messrs. Charlton, Allen, and Co. of Mount-street, and Messrs. Day and Son, Lincoln's-inn-fields, were creditable as pictures.

HOME-MADE GAS.—A baker of Herron-gate, near Brentwood, says a country paper, has constructed on his premises a gasometer, on a new principle, which occupies a space of about 6 feet square. He has fourteen lights, and the expense per night, burning from 7 to 12 o'clock, including interest of money for cost of erection—less than 20*l*.—is 2½*d*.

PROVINCIAL NEWS.

Horncastle.—The acoustic properties of the new Corn Exchange here are said by the *Lincolnshire Chronicle* to be very defective, the reverberation of the voice of each speaker, at a recent public meeting held in it, having been so great as to render the words nearly unintelligible except to those in the immediate vicinity of the speaker. One main purpose of the building, it is added, was the supply of a good public room for large meetings. It is hoped the architect will be able to remedy the defect.

Norwich.—The new Free Library is now roofed in, and will be opened in the course of the autumn.

Nantwich.—The foundation of a new Grammar School, for the education of the middle classes, was laid at Nantwich, a week or two since, by Mr. G. F. Wilbraham, at whose personal cost it is to be erected and endowed.

Chester.—"We are informed," says the local *Chronicle*, "that some most extraordinary discoveries have been made relative to the plans and estimates for the construction of the intended workhouse, for the Boughton Union, and that the discussions on the subject at the last meeting were remarkable. If what was then alleged is capable of proof, the steps taken were doubtlessly right; and if all that transpired as to the compilation of the plans can be sustained, there is much reason for animadversion. As the board does not allow the presence of the press, we are not in a position to speak of what occurred with safety or correctness. When there is a studied secrecy, the community has a right to suspect, and will believe the worst, as to motives and acts."

Liverpool.—The town council, at a recent meeting, decided to adopt a recommendation of the Improvement Committee, to purchase 1,500 square yards of land in Shaw's Brow, for 5,550*l*. as a site for the erection of a new library and museum. This site is in the immediate vicinity of St. George's-hall.——Workmen have been making preparations, according to the local *Journal*, for placing the sculptured finials on the dwarf granite pillars or gate-posts of the parapet surrounding St. George's-hall. These finials, which are to be twelve in number, are representations of Nereiads and Neptune's trident-bearers, arranged in pairs at each gate. Each of these figures is represented as rising out of the wave, and grasping a cornucopia surmounting fruit: on the upper end is a cluster of foliage, on the leaves of which the lantern rests. The heads and trunks of the figures are of heroic size, standing about 7½ feet high. They have been modelled and sculptured by Mr. G. Nicholl, of London, in fine Portland stone. Each of the figures is of one block, and in its finished state weighs about a ton and a half. The white colour of the sculptures contrasts with the red hue of the granite pillars on which they are placed.

Manchester.—The new circular room at the Market-street end of the Royal Exchange is about to be opened to subscribers. A gallery runs round the end, which will be devoted to reading, the newspapers being placed on stands and tables. The open floor below will be entirely devoted to its legitimate use as an Exchange. The gallery is reached by a wide and light open iron staircase. Five large additional self-ventilating lights are being inserted in the groinings, making nine in all, one in the ceiling of each groined recess. There were at first but four of these lights, but it was discovered that they caused awkward shadows, and hence the increased number. There will also be lights under the gallery. The windows are filled with plate glass from St. Helen's.——A foolish strike, says the local *Courier*, amongst the bricksetters and their labourers employed at the Manchester New Workhouse, at Crumpsall, which retarded the progress of the works, has terminated, but not quite voluntarily on the part of the workmen. The strike was not one of the ordinary kind between masters and servants, but arose from a ridiculous dispute between the bricksetters and their labourers, and had no reference to the rate of payment, but arose from the employment of a bricksetter who was obnoxious to a labourers' union in Blackley. The delay in the works caused by the dispute was found to be so inconvenient, that the Manchester Board of Guardians resolved to support the contractors, Messrs. Bellhouse and Sons, in compelling the resumption of work, under the protection of a strong body of county constabulary stationed on the ground: other labourers were accordingly procured, and the buildings are proceeding.

Sheffield.—Lord Wharncliffe has caused several improvements to be carried out at Wortley. A gasometer has been erected on his Lordship's premises, and mains laid into the village, where the Wortley Arms and several other dwellings have already been lighted up. His Lordship has also given instructions for some public lamps to be erected in the village. Arrangements are being carried out, likewise under his Lordship's directions, for bringing to the village an ample supply of water.

Kelso.—The Corn Exchange here is now completed and opened. The building, as described by the local *Chronicle*, is in the Old English style of architecture, and with its spires and gilded vanes, is said to be an ornament to the town. The interior of the Exchange is an oblong square, extending 105 feet in length by 52 feet in breadth; and, deducting 5½ feet as the space occupied by the stalls all around, there remains an area of 91 feet by 41 feet, for the use of the public,—equivalent to 415 square yards, and capable of containing with ease 1,200 people. The Exchange will be rendered available, under certain conditions, for holding public meetings, and for lectures, concerts, &c. for the last of which it is suited, having a gallery extending the whole breadth of the interior for the accommodation of an orchestra.

PUTNEY BRIDGES.

THE conservance of the Thames is supposed to be in the Corporation of London, which enjoys an arbitrary rule from Gravesend to Staines. Its conservation concerns every citizen, since on free navigation and proper regulation depends much of our commercial prosperity, as well as the health of the inhabitants. Some wants may be difficult to supply: there is, however, one very simple matter that comes under their jurisdiction, and that is the due allocation of bridges;—first, that the design is a good one; next, that the position is right; and lastly, that it obstructs no way: yet it would seem that little, if any, attention has ever been paid to these things, much as they concern the free intercourse both on the land and water.

Old Putney-bridge has long been the standing reproach of our *pontifical* corporation: it is a sort of mole to obstruct navigation, a relique of antiquity little adapted to vessels and boats such as now navigate the Thames: being about 700 feet long, it has no fewer than twenty-five pile buttresses, between most of which there is but 15 feet of space. Scarce a beam of its structure but has been drawn and replaced so often, that it is all at jars: still, being the property of a private company, the patchwork is kept together so as to pay a dividend, the directory making it a point to discourage traffic on the Lord's day, by charging *double tolls!* That is, however, their affair. Railways find that it pays better to encourage the multitude by charging *less on Sunday*.

Another bridge has been lately constructed close to the old one, but diverging from it at an angle of 10 degrees: it is built on the new principle of the tube, with buttresses of concrete compacted in iron cylinders, having four columns on each pier: the design might have been handsome, and, at a comparatively small increased expense, it would have served the purpose of an aqueduct, a foot way, and also a carriage-way; yet this bridge which *mars the view* of the river, and the aspect of the hamlets of both Fulham and Putney, is dedicated solely to the object of an aqueduct! The steamers plying up or down had formerly difficulty enough to steer clear of the buttress beams: they have now another breaker ahead in the aqueduct piers. Having cleared Scylla, Charybdis is at hand: there is scarce room in the old bridge water-way for a Richmond boat: our little skiff, on steaming up, hugged close on the timber; then stopped and sidled through.

What on earth were the corporation about

when they tolerated the erection of a second bridge alongside the old one? What were the proprietors of crank shares in Old Putney-bridge dreaming of, when they omitted, or forgot, or refused to agree with the Water Company, to erect a more solid and more permanent structure, that *might have served for all purposes?* Where was their discretion? Where was their taste? The genius of *uncivil* engineering could hardly produce a more hideous example of pontification, than the shaky, wavy, crooked old Putney! It strikes off obliquely from the Fulham-bank to the last-piled interval, where it turns again to the right, to avoid the churchyard, and to open obliquely on the main street of Putney. Then comes the new bridge—no, the aqueduct on stilts—which has no regular form, nor has it any symmetry!

A young Todleben offers a remedy. First, sink iron cylinders alongside those of the aqueduct, and exactly corresponding in appearance: let the buttresses be wider and stronger, if required for carriage traffic: connect the framework of another tubular span (a more massive one), with that now sustaining the pipes: let the new one be used for carriages, the other for foot passengers. There would be no great difficulty in designing a graceful finish, in form and ornamentation.

The new bridge has one advantage: it crosses the stream at right angles, and leads direct from Putney High-street, nearly to Fulham church, but clear of it. It has, moreover, between piers, open spaces of about 70 feet each. Let the companies at loggerheads, lay their bridges and differences together, the sum will be, great public accommodation, scenic improvement of this beautiful reach of the river, and the clearance of the deformed old wooden piles, which have been the occasion of many a loss and calamity. At present the wrong bridge is in the right place, whilst the wrong place is occupied by a hedge-carpenter's pontoon, that never was right; both together presenting, to foreign artists and engineers who visit London, the sublimation of absurdity.

THE WORKING EXPENSES OF RAILWAYS.

INSTITUTION OF CIVIL ENGINEERS.

AT a meeting, on the 20th of May, the proceedings of the evening were commenced by reading a reply of Mr. Robert Stephenson, M.P. president, to observations in the Second Report of the Postmaster-General, to the House of Commons, dated 30th January, 1856. This reply has been printed *in extenso*.

The paper read (in abstract) was "On the Improvement of Railway Locomotive Stock, and the Reduction of the Working Expenses," by Mr. D. K. Clark.

It was stated that the design of the paper was to discuss the locomotive engine physiologically; to consider some departments of practice which appeared to be in a transition state; to endeavour to indicate how far, in some respects, the locomotive, even in its present advanced state of existence, was susceptible of improvement; and to form some estimate of the pecuniary advantages thus derivable. The three elements of the locomotive,—the boiler, the engine, and the carriage,—were considered successively.

With respect to the boiler, the fuels in use, in this country, were stated to be coke and coal. The author had in a previous paper shown, by mechanical analysis, that the combustion of coke in the locomotive was practically complete; and he adduced, in corroboration, the results of a subsequent chemical analysis of the gases of combustion, by M. Ebelmen, in the engines of the Paris and Lyons Railway.

The author adduced the results of trials made by him, in 1850—51, and by Messrs. Woods and Marshall, in 1854, which showed, that in the prevailing type of boilers, the evaporative powers of good coal and good coke were as 2 to 3; coal doing mechanically just two-thirds of the duty of coke. He proceeded to give an account of recent trials made by him, in the beginning of this year, with the "Canute," on the London and South-Western Railway, one of Beattie's passenger-locomotives, planned expressly for the combustion of coal, and the heating of the feed-water. It was argued that, on Beattie's system, an economy of 36 per cent. of coal was effected in comparison with ordinary engines burning coal; and that this system was on a footing of equality with coke-burning engines, in evaporative efficiency of fuel, weight for weight.

The water supplied to locomotive-boilers was stated to be generally impure, mechanically, or chemically, and to affect very injuriously the durability of the engine, reducing, in one case, the durability of the tubes from eight or nine years, with soft water, to three years, with hard water. The loss by priming with bad water was shown to be considerable. It was concluded that the water supplied to locomotives should be previously purified, chemically and mechanically, in large tanks, or reservoirs.

With respect to the engine proper, the author maintained that the link-motion was a sufficient and satisfactory expansion-gear; that its merits were not appreciated; and that in the ordinary practice of expansive working in locomotives, the steam was not cut off earlier that at 40 to 50 per cent. of the stroke; but that, with proper arrangements, it might be cut off at one-fifth. He argued also that the steam should be superheated, and the cylinders perfectly protected; and that the slide-valves should be balanced.

The following was an abstract of the successive items of economy of working charges, separately estimated:—

By the successful substitution of coal for coke	33 per cent.
By efficiently heating the feed-water	15 „
By the use of pure feed-water	10 „
By protecting the cylinders, and superheating the steam	10 „
By increased expansive working	25 „
By the correct equilibration of the engine	10 „

The gross resulting economy would then be represented, not, of course, by the direct sum of these per centages, but by the result of the successive reductions obtainable by their successive application. Thus, after making the first deduction of 33 per cent. there would remain a balance of 67 per cent. to be operated upon for the second deduction, which was 15 per cent.; but 15 per cent. of 67 was equivalent to 10 per cent. of the original quantity, and would leave 67 — 10 = 57 per cent.: the third deduction to be made was 10 per cent. of 57, or 5·7 per cent. of the original, leaving 51·3 per cent. as the balance to be operated upon for the next deduction. Continuing the operation in this manner, the gross resulting economy would amount to about 70 per cent. of the existing average working charges. Allowing for contingencies in the estimate, 50 per cent. was adopted by the author as the probable average saving that might be effected in the consumption of fuel, and generally in the working charges of the locomotive stock of the railways of the United Kingdom.

The average apportionment of the receipts on the railways of this country was stated to be as follows, on the authority of Mr. Chattaway:—

Working charges	46½ per cent.
Interest on guaranteed capital	28½ „
Dividends in respect of ordinary shares	25 „
Gross receipts	100

Also, that the average cost of locomotive power was 29·3 per cent. of the receipts; consequently, the saving, estimated by the author, would be one-half of this, or 15 per cent. of the receipts, and would raise the available dividends from 25 to 40 per cent. of the receipts; or from the average on ordinary share capital, stated by Mr. Chattaway as 3·14 per cent. to a dividend of 5 per cent. per annum.

The president's *conversazione* on the 27th was attended by a very large number of persons: there was as usual a good collection of models and works of art. We may mention that Mr. Charles Manby has resigned the office of secretary, which he has long held with advantage to the Institution; and that Mr. James Forrest has been appointed in his stead. This has caused a vacancy at the Society of Arts, to fill which candidates have been advertised for.

THE THEATRE.

The Princess's.—As a graceful act on the part of Mr. Charles Kean, we may be excused, perhaps, for mentioning that he has recently presented to the conductor of this journal a very elegant vase of silver, 12 inches high, inscribed as follows:—

"To George Godwin, F.R.S. from Charles Kean, as a slight token of the high appreciation entertained for valuable assistance in architectural details, while carrying out the design of placing before the public correct historical illustrations of "Macbeth," "Henry VIII." and "The Winter's Tale," produced in the years 1853, 1855, 1856, at the Royal Princess's Theatre, under Mr. CHARLES KEAN'S direction.—May, 1856."

The *Winter's Tale* continues to fill the house nightly to the ceiling.

The Adelphi.—Mr. Webster intends to build his new theatre in iron; but it is not correct, as stated in some of the papers, that the works are already being proceeded with. The plans are not yet matured. On the 4th inst. the well-known Adelphi piece *Vanderdecken* was revived there for the benefit of Madame Celeste, when that versatile and very admirable actress played the part made famous by poor O. Smith.

Paris.—A theatre of large size is being built, by M. Charpentier, in the Place de Châtelet, to hold 6,000 persons. It is the speculation of a banker, we are told, and will be a fine thing as far as construction goes.

Ventilation.—It would be well if, taking advantage of opportunities, managers of places of amusement would endeavour to improve the almost universal fault of want of *adequate* means of exit for the foul air generated in them. Science would surely show how this could be done, without creating "draughts." Managers, as caterers for the public, are morally bound to provide that most necessary of all things,—air that *may* be breathed; so as to prevent their audiences undergoing a *peine forte et dure* while passing the ordeal of a modern "entertainment." Yet scarcely is this deemed worthy of passing notice; and the atmosphere is, generally speaking, in such places, so compounded of bad gases, as not only to render respiration difficult, but to inflict a certain and ineradicable injury on the audience. The insertion in your columns of this universally-shared remonstrance cannot fail to draw the attention of those to the subject whose business and whose *interest* it is to effect the remedy. Improvement, it is true, should not stop here, as a visit to the Parisian theatres, &c. most amply testifies; but assuredly it is the first and all-important desideratum to achieve; and till it be obtained, may the public, and their organ, the fourth estate, raise their voice in protestation against an evil unworthy the scientific progression of this nineteenth century.—PUBLICOLA.

WELLINGTON COLLEGE, NEAR SANDHURST.

ON Monday the 2nd, her Majesty laid the first stone of the intended college in honour of the late Duke of Wellington. A description of the proposed building, with view and plan, will be found at p. 85 of our present volume.

In preparing for the ceremonial, advantage was taken of the permanent scaffolding raised for the erection of the building, the exterior poles of which formed the main supports for the seats that were raised for the general company: of these five descending from the passage-way at the back towards the interior, like an amphitheatre, covered a portion of the foundations of the building, but leaving the arcade piers of the two quadrangles entirely clear in front. The base stories of these piers being fixed in their places, defined the interior lines of these quadrangles, those adjoining the chief corner-stone being carried two feet above the general base line, for the purpose of showing the alternate bright red brick and box stone construction of the building. The front seats were elevated five feet from the ground, so as to prevent the guards, who lined the enclosure, from interrupting the view therefrom. In decorating the front and supports of the awning covering the seats, red was used as the ground colour, the front of the lower seat giving a red line, under which a lining of blue gave a base to the whole, and at the same time a foil for the scarlet tunics of the grenadiers. The supports were lightened by spiral fillets of white, and connected above with a valance of red. At regular distances the supports were topped by flags, placed in groups of three, two being sloped and looped up, while the centre one, slightly elevated, hung freely on its staff. The intermediate supports were decorated with masses of wild broom and furze, whose yellow bloom and

green leaves, bound with laurel and red cloth festoons, made a pleasing contrast. Over the passage to the Queen's terrace, on the north front, a bust of the Great Duke was placed on a covered pedestal, and encircled with wreathed laurel and bays: above, on either side, were grouped flags as on the other sides of the quadrangle.

The supporting scaffolding, that carried the windlass and men that lowered the stones, was decorated to agree with the other portions: a ground colour of red, bound with red and white twisted cord, drooped in festoons and tassels to the flat parts, edged with a full valance looped up, the upper angles having their effect heightened by two sloped Union flags looped up; while, in the angle between each pair, a Royal Standard freely spread its bright colours on the breeze. The massive timbers that carried the whole were covered with the prevailing colour, round which twined bands of white, alternately with wreaths of laurel and bay, the general effect being backed by the tall masts of the scaffolding, each of which was graced with standards, flags, and banners, in every variety of application, producing a general effect that was much admired by the Court and Governors. Her Majesty and Prince Albert personally expressed to the architect, Mr. Shaw, their approval of the decorations and arrangements.

The whole of the general arrangements and decorations were superintended by the assistant-architect, Mr. Thomas Renton.

THE OXFORD ARCHITECTURAL SOCIETY.

At the fifth meeting, held on the 21st ult., Mr. Street read a paper on German Pointed Architecture. He entered at considerable length into the question of the date of German buildings, and showed that they were always much behind both those of France and England in any new development. A comparison of dates, he proved, must at once set aside any claims of Germany to the invention of the Pointed style. For whilst buildings whose whole character was directly derived from Romanesque or Lombard works were being built in the one country, Amiens and Westminster, and a host of churches of similar style, were rising in the other. He then proceeded to show the peculiarity of the ground plans of German churches. Each country affected a peculiar arrangement of the ground plan. In France the apsis was brought to perfection: in England the square east end was all but universal; whilst, in Germany, though both these plans were also found, the common plans were the transverse-triapsal or the parallel triapsal. The attempts at imitation of the French Chevet were very rare, and Cologne Cathedral, whose plan is obviously borrowed from France, and entirely unlike the German type, is a unique example of this arrangement really well carried out in a German church. He then entered into the question of window tracery, and exhibited a large number of drawings of German windows of the most remarkable character, among which those from the cathedral at Minden were, perhaps, the most curious.

On the 26th ult. the members of the society visited Coventry, and examined especially the site of the ancient cathedral. A writer in the local *Standard* says,—"The cathedral occupied a place called Hill-close, on a declivity from the north side of Saint Michael's and Trinity church-yards, and ran parallel to and at no great distance from Trinity Church, its south door opening into Trinity Church-yard. This grand edifice was built after the model of the cathedral at Lichfield, and was equally beautiful; and as Lichfield has the transept in the centre, similar to Coventry, and is 138 yards in length, the cathedral at Coventry probably reached from the entrance of the Blue-coat School to Mr. Pearman's house in Prior-row, as it is stated that the house built by the Rev. Mr. Bryan (now Mr. Gulson's), was on the cross aisles, and near the great central spire. All historians remark the grandeur of effect that must have been produced by the assemblage of three such fine churches, when the cathedral was standing.

This noble cathedral was levelled to the ground by Henry VIII. at the time he destroyed the neighbouring monasteries, after standing nearly 500 years. Only one fragment remains (now worked into a dwelling-house) of this once fine, costly, and majestic building. The solemn and religious processions of the monks along its long and richly-adorned aisles have long ceased, and its glory remains in its reminiscences."

"In 1649 the city granted part of the site of the cathedral to John Bryan, vicar of Trinity Church, who erected a house over against one of the steeples of the western front, near or over which passed the cross aisles of the original church: he also erected some dwelling-houses on the foundations of the two steeples, which were originally on both sides of the entrance from the Butcher-row, cleared the grounds of the ruins, and converted it into a garden. About the same time another part of the ruins was levelled, in the removal of which was discovered a great abundance of carved and gilt stones: of this was first formed a bowling-alley, and afterwards a garden: the east end of the cathedral had been previously converted into gardens and orchards, and the eastern wall of one of them is now standing on the original foundation of the chancel."

COMPETITIONS.

Liverpool Free Library.—The committee have just completed the first stage in the proceedings. There were 115 sets of sketches. These were hung in a suite of well-lighted rooms, the key of which was kept by the chief librarian, and to which no person, we are told, has had access except the members of the committee and the corporation architect called in to advise and assist. A schedule was prepared under the direction of the latter gentleman, giving, in a tabular form, the area respectively covered by the buildings in each design, the area of accommodation in each department, the mode of lighting, &c. so as to facilitate the comparison of the plans. The committee then went over the plans separately, minuting down their observations on each, and met to compare notes from time to time. Finally, the committee's observations were compared with those of the professional men (the chairman and the corporation architect). The result has been that sixteen designs have been unanimously selected, any of which the committee think would answer their purpose, with such modifications as any plan would have to undergo before being finally carried out. The authors of these sixteen will now be called on to mature and complete their designs for the final competition. The other designs are being *returned*. We must confess to some misgivings as to the goodness of the course which is being pursued, although we have none as to the honest intentions of the committee. It has a hole-and-corner aspect, which we are not prepared at this moment to recommend for imitation.

Scarborough Cemetery Chapels.—On the 23rd ult. the premiums were awarded as follow: First, to Messrs. Pritchett and Sons, architects, Darlington; and second, to Messrs. Johnson and Haswell, architects, Newcastle. Upwards of twenty sets of plans were sent in for competition, and the Board have expressed a favourable opinion of their merits generally.

DRAUGHTS IN CHURCHES.

All who have studied the matter will agree with Mr. Rosser in his remarks with reference to the importance of guarding the air under the roof surface from draught, and from change of temperature. But, in order to do this effectually, it is *essential* that there should be not only the double substance of covering, but also a *space* of *air* between the two substances. Even double boarding and asphalte are not properly effectual without two inches at the least of air between the outer covering and the inner lining. In laying a slated roof, the best possible plan is to fill in the spaces between the slate battens with *plastering lath*, and *flush up* the space with coarse plastering mortar, before the slating is put on. In a tiled roof, *torching* from within answers the same purpose. The rafters may then be lined beneath with boarding, or the boarding may be filled in between the rafters, care being taken to leave the requisite space between it and the covering.

W. W.

APPROACHES TO HYDE PARK FROM BROMPTON.

Under the above title, in the number of the *Builder* for May 24th, there is a curious statement from one who signs himself "Brompton Square." It is really marvellous to see how a self-interested party can distort the plainest facts. A cursory reader might imagine that an injustice had been done by the very parties upon whom, for the second time, a gross injury is now attempted.

It is more than inferred that the owners of the houses lately erected on Lord Listowel's two fields have deprived the inhabitants of Brompton-square of some long existing right or privilege, whereas the exact contrary is the fact. Handsome and valuable houses were erected on Lord Listowel's property, with the express understanding that his Lordship conveyed to the owners thereof all the rights and privileges that he had himself enjoyed; the greatest, and what constitutes the real charm of this locality, being its privacy, and the absence of any thoroughfare. Why, therefore, is our property, for which we have paid so high a price, to be depreciated, and a most serious injury inflicted upon us, for the purpose of enhancing the value of the property of others who have not contributed one farthing towards the large expenditure incurred by Mr. Elger in the vast public improvements he has effected in this neighbourhood?

A thoroughfare through our property would doubtless enhance the value of the houses in Brompton-square, which were erected long before the remotest idea of such a contingent advantage; but the occupiers of them have been deprived of no right; and, so far from their being in a worse position now than at the formation of that square, it is well known that two roads have recently been made by the Crown, a short distance westward of it, leading direct from the most valuable and populous parts of Brompton to Hyde Park and Kensington Gardens, independently of the thoroughfare which has long existed by Rawstone-street. The owners of property in Prince's-terrace, Rutland-gate, and Ennismore-place, have too much confidence in the justice of their cause, in the English feeling of fair play, to fear that their property is to be so seriously depreciated, because it may suit the purpose of one or two well-known interested persons to set on foot an agitation, the object of which is to enhance the value of their own property, at the sacrifice of that of many others whose simple offence is that they desire to live quietly and enjoy their own rights.

A FREEHOLDER OF PRINCES-TERRACE.

*** We give place in fairness to this the first of two replies received; but we must add that the letter in question was written by one who we believe has no more *personal* interest in the matter than we ourselves have in our advocacy, now of long standing, of the endeavour to obtain this much-needed opening to the Kensington-road from the Brompton-road. Those owners of houses in Prince's-terrace who are opposed to it must not imagine it is merely a question between them and the owners of Brompton-square: it is a question between them and the public, and on that ground alone we have urged it. We doubt altogether the supposed injury which would result to them. The arrangement of the thoroughfares of a great metropolis is a matter of public concern; and if it were not that self-interest itself, taught by experience, usually renders interference in this respect unnecessary, it would be the duty of the legislature to pass such enactments as would obtain the most direct means of communications for the community at large. Let us imagine the condition of London, or any large town, if the owner of each separate plot of land, on finishing his street, had built a wall at the end of it, and stood upon his "rights."

BARN FLOORS.

During the last two years I have laid down several barn-floors with asphalte (as described by Mr. Greaves) in this county. I find, however, that they do not answer their purpose in the most important point, viz. *they retain the moisture*, and consequently destroy the grain. In all other points, I can fully confirm Mr. Greaves's testimony.

Could any of your correspondents suggest any means to remove the moisture, the floors would be far preferable to any others for the purposes named.

I have thought that if brick or stone drains were put under the floors, at about 4 feet apart, and 12 inches sectional square, the spaces filled with broken brick or stone, and the blocks of asphalte laid thereon, with the coating run over it, that might prevent dampness. In the barn-floors that I have had laid down, I put 9 inches of broken brick and stone (*but no drains*). Still, the moisture rises, and the tenant is obliged to have a sheet for the corn to lie upon. If this could be remedied, it would be of great service both to landowners and their tenants.

G. D. POCKLINGTON.

STRIKE OF SHIPWRIGHTS AT LIMEHOUSE.

An unfortunate dispute has occurred in consequence of an endeavour of Messrs. Young, Son, and Magnay, so to arrange their times of work and refreshment as to enable their workmen to leave off half an hour sooner in the evening, and even to diminish their time of real labour by some ten minutes, without altering or diminishing the amount of their day's wages. Simply, one would imagine, because an arrangement so promotive of the improvement, recreation, and welfare of the men has originated with the masters, and assumed the shape of a stiff-looking "notice" that it was about to be done without consulting the workmen themselves, a determination has been come to by the men, and by a meeting assuming to represent "the whole of the shipwrights of the port of London," to resist, as an infringement, not of habits and customs, but of rights and privileges, the endeavours of Messrs. Young and Magnay to economise and arrange the hours of labour to the advantage of both parties. The gist of the intended change appears to be the throwing of a twenty minutes' interval, or what is called "allowance," between breakfast and early dinner, into the breakfast *hour*, in place of *half* hour, so as to enable many of the men to enjoy their comfortable breakfast meal at home with their families, instead of at a public-house.

The men are not content to be deprived of this fourth meal or "allowance" between breakfast and tea, which tea, by the way, by the new arrangement, they would also have the opportunity of enjoying at home as well as their supper, in consequence of the half hour for tea being thrown a little forward to, and cut off the *end* of, the day's labour, instead of coming in the midst of it, like the rest of these many intervals, allowed, as they are, nowhere but in London, and really not requisite for health or even rest in a day's work of only nine and a half hours: indeed, medical men insist that two hearty meals a day are sufficient for any one, far less four during the hours of work, besides, probably, one before going to work, and another after leaving it, or, in all, six meals a day! One object of the employers, in the present instance, appears to be the economisation of time; for these many intervals, as may readily be conceived, involve a much greater loss to masters and men than the mere measured minutes to which only they nominally extend. But keeping in view the immense advantage to the working man (so often insisted on in his behalf) of being able to throw down his tools *as early in the evening as possible*, we really cannot see any other reason why they have not regarded this as a positive *boon*, than simply because it did not emanate from themselves.

HOLYHEAD HARBOUR AND BREAKWATERS.

THE works now in progress at Holyhead, under the direction of Mr. J. M. Rendel, the engineer, are proceeding with activity, and will comprise a harbour of upwards of 300 acres of deep water, and a roadstead eastward of this, comprising from 300 to 400 acres of deep water, always available for vessels in case of their having to run to the old or the new harbour.

The works involve a north breakwater, 7,000 feet in length, of which 6,400 feet have already been formed, in from 7 to 8 fathoms of low water at spring tides; also an eastern breakwater of 2,500 feet, formed in from 3 to 4 fathoms of low water at spring tides, with all the necessary convenience of landing-pier for the largest class of Transatlantic steamers, with railways so laid down on such landing-pier that passengers may step from the boat into the railway carriages.

The quantity of stone used in the works up to the present time, and since 1849, is upwards of 5,000,000 tons. The peculiarity in the construction of the works, which has enabled the Government to carry and place in the breakwater this enormous quantity of stone in less than six years, is the introduction of a timber staging, first built into the sea, slightly in advance of the stonework, upon which there are laid five lines of railway, over which the waggons laden with stone are drawn from the quarry by locomotives, and the stone is deposited into the sea at 20 feet above high water by the falling of the bottom of the waggons, somewhat in the same way as the "hopper waggons" in the coal districts of the north of England.

The stone is obtained in masses, varying in size from that of ordinary building-stone up to 14 or 15 tons in a stone.

The average number of labourers and mechanics employed in the quarries and on the railways is from 1,100 to 1,200.

The expenditure up to the present time, including the purchase of land, has been upwards of 500,000*l.*; and it is calculated that by the time the works are completed, including the enlargement of the harbour as before referred to, the total cost will amount to upwards of 1,000,000*l.*

NEWS FROM ADELAIDE.

Water and Sewage.—The City Surveyor, by last despatch, had laid before the Municipal Council his plan for supplying the city with water, and for carrying off the sewage. The water pipes he proposed to lay just under the kerb stone at the side of each street, adjoining the pavement. Two sets of tanks to hold 300,000 gallons each, one for North Adelaide, and the other for South Adelaide, would be erected on elevated sites, so as to supply the city by mere gravitation. The tanks would each form a tower 82 feet high, the cost of tower and tanks to be 5,000*l.* For the disposal of the sewage, and besides a system of city sewers, the surveyor proposed to run an iron tube, of 4 feet diameter, along the bed of the river Torrens, from Frome Bridge to the Reed Beds, or even to the sea (a length of 8 miles), if the sewage could not be completely disposed of at the Reed Beds. The tube would cost about 12,500*l.* a mile. The iron plates, it was remarked, could be prepared in England. The *Adelaide Observer* urges the deodorization of the slaughter house refuse, and the sale of that and of the sewage to neighbouring farmers or horticulturists.

Temperance Hall, and Freemasons' Hall, for North Adelaide.—A meeting is reported in the *Adelaide Observer* as to the obtainment of funds for the erection of the Temperance Hall, already founded in Tynte-street. The architect, Mr. Cole, pointed out several plans, and in course of the discussion, it was suggested that the proposed Masonic Hall should be adopted by arrangement with the Masonic Hall Society, and the proposed Temperance Hall abandoned. It was ultimately resolved, however, that the architect should revise his plans of the latter, and advertise for the erection of the walls and roof.

St. Luke's Church, Adelaide.—The Episcopal Church of St. Luke, recently erected in the south-west part of the city, facing Whitmore-square, says the *Australian and New Zealand Gazette*, was consecrated by the Bishop on 14th February. The building is 66 feet in length, by 44 feet in width, including the side aisles. The sacristy is surrounded by a carved railing, and it is intended to construct the pulpit and other internal fittings of cedar. There is a large Gothic window over the altar, the upper part of which is stained glass, in which blue, crimson, amber, and white are blended. In the centre there is a cross, which is surrounded by a star, formed by the intersections of three triangular devices. The window has been constructed by Mr. Brooks, of North Adelaide. The erection of the building has been effected under the superintendence of Mr. Thomas Hall. The total cost, including the internal fittings, will be about 1,200*l.*

Adelaide and Gawler Town Railway.—The works on this line had not progressed so far as those between Adelaide and the Port in February last. The *Adelaide Observer*, of 26th January, gives a long report of the state of the works. It is intended to go no farther at present than the south side of the South Para, where the temporary Gawler Terminus will be erected, and the cost of a bridge obviated. The rails were all ordered, as well as other materials, in England, and it is expected that in the beginning of next year, the line will be opened for traffic as far as Salisbury.

USE OF PARTY WALLS.

HEMBRY *v.* SMITH.

IN this case, at the Rolls' Court, on the 30th ult. an interim injunction had been granted against the defendant, for having interrupted the smoke from ascending through the chimney-flues of the adjoining house to his own. The case was interesting to builders. It appeared that in 1839 Mr. Felton built the house No. 7, Halkin-street, Belgrave-square, and it was agreed with Mr. Thomas Cubitt that the intervening wall between the two plots of ground should be built as a party-wall, and it was accordingly built in part on Cubitt's ground, in Lowndes-street, next door. In 1844, Mr. Cubitt built the house No. 12, Lowndes-street, and then used two of the standing flues in the stack of chimneys left open in the party-wall, and no objection was taken to it until Mr. Felton, in 1848, had assigned the house to Lady Harrington. On her decease, the lease was assigned to Mr. Edmund Smith, solicitor. Up to the 19th of February, 1855, no objection was taken to the use made of the flues by Mr. Cubitt, but the tenant then found out that the smoke would not ascend through the butler's pantry chimney in Lowndes-street house, and it was found out that Mr. Smith had stopped up the tops of two flues in the party-wall, which he contended he had a right to do, as no person could be entitled to use his flues without his permission.

Mr. R. Palmer and Mr. Fielding Nalder were counsel for the plaintiff; Mr. Southgate for the defendant.

The case was heard on the merits, and the injunction moved to be made perpetual.

The Master of the Rolls held that the defendant had accepted the assignment with the full knowledge of the existing arrangement as to the party-wall in which the flues had been originally built. Mr. Cubitt's tenant, as well as himself, had a right to use the flues under that arrangement, and Mr. Smith ought not to stop them up. Under the circumstances, the injunction was proper, and must be made perpetual. The costs to be paid by the defendant.

BUILDERS' BILLS.

THE particulars of a case intended to show the necessity of security being given *to* contractors, as well as *by* them, in the construction of works under contract, have been forwarded to us, with comments, which, however, are too personal, and strongly put, for publication. The case was that of Brake, a builder, against Schmollinger, a tavern keeper, and related to work and labour done, materials supplied, and money expended in the finishing of three houses for defendant at Croydon.—Defendant pleaded not indebted, although there was alleged to be a balance of more than 300*l.* due to plaintiff on a contract, as agreed between the parties. The works had been commenced by a man named Pearman, who had drawn upon a mortgage, as the works went on; the money being advanced by the Rev. Mr. Mortimer; and Pearman having, it was said, drawn a considerable sum beyond what he was entitled to, left the premises, and went no one knew whither. Plaintiff was also paid by advances on the mortgage granted on the houses and land. The action for balance was brought in the Court of Common Pleas, at Guildhall, and was then referred to a Barrister-at-Law, for the settlement of all matters in dispute. Two surveyors were appointed on the part of the plaintiff, and two on the part of the defendant, who measured and valued the works, and after the measuring was completed, the defendant's surveyors refused to go farther into the matter. The plaintiff's surveyors therefore completed their account, and reported the value of the works measured to be about 140*l.* more than the day-bill amounted to. The arbitration then proceeded, and the arbitrator awarded his verdict in the plaintiff's favour, condemning the defendant to pay all costs. The award was taken up by the plaintiff at an expense of 15*l.* The defendant immediately he knew the result, became bankrupt. The plaintiff had thus done a thousand pounds' worth of work for an employer, it was alleged, not worth a shilling, and must now it appeared be a loser to the extent of at least 800*l.* The two surveyors' accounts alone are said to have amounted at least to 300*l.* a sum which the plaintiff must pay before he can prove his claim before the official assignee. The statement is altogether a strange one.

Notices of Books.

Shakspere's England; or, Sketches of our Social History in the Reign of Elizabeth. By G. W. THORNBURY. In two volumes. London: Longman and Co. 1856.

"SHAKSPERE'S England,"—much of it Shakspere's London,—is a pleasant olla podrida from the Great Shaksperean feast, well seasoned with varied condiments from other sources. The author leads us back to the sixteenth century days of gilt rapiers and roses on the shoe, of ruffs and fardingales, peaked and starched beards and slashed hose, to the days when fingers were forks and the tobacco-pipe the last novelty. He takes us rambling, gossipping walks "through Ludgate, up Cheap, and into Paul's, then away to the Bear-garden, in Southwark, and the Globe; anon past the old cross at Charing; to the Presence-chamber at Greenwich, or to Richmond, and back, to make a night of it, at the Devil Tavern, where the players and poets meet just under the chimes of St. Dunstan." These were the days when iris silks and leathern jerkins jostled each other in the streets of London, and when Drury-lane was Park-lane, and Whitehall and the Tower were Buckingham-palace and St. James's. London then, as now, could boast of various bridges; but amongst them were Fleet-bridge, Bridewell-bridge, and Holborn-bridge, while the clear pellucid salmon-sporting Thames could only boast of its one old London characteristic,—the wonder of all country cousins, and the pride of all Cockaigne,—"the bridge," with its houses and gardens, drawbridge, chapel, gatehouse, "nonesuch," et-cetera.

There is a lively and interesting chapter on the Architecture of Old London,—its mansions and palaces, and, indeed, of others besides those of London, and comprising minute descriptions of various well-known Elizabethan edifices, as well as some account of their architects, and, amongst them, of course, John Thorpe, the designer of many mansions and castles, and of his own quaint dwelling, with I T for its ground-plan,—I for the offices, and T for the house.

The subjects treated of in the present volumes are very various, and all combine in giving us, without many new facts, a graphic idea of life in the England of the sixteenth century.

Portsmouth Protected; a Sequel to "The Peril of Portsmouth;" with Notes on Sebastopol, &c. BY JAMES FERGUSSON, ESQ. With plans and woodcuts. London: Murray, Albemarle-street. 1856.

OUR readers will recollect Mr. Fergusson's "Peril of Portsmouth," and the new system of fortification which he proposed. In the present "Sequel" this important subject is farther treated of, by the light which the late war has

shed on the science of fortification and defence. The author begins with a "personal introduction," in which he (with some quiet humour occasionally) gives a narrative of the discussions which have taken place in reference to his proposed system since his last publication, "The Peril of Portsmouth," appeared; and indeed of the development of his views generally, and the reception they have met with. The opening section of the present work treats of the results of the present war as bearing on the subject. Mr. Fergusson is of opinion that every circumstance of every siege operation hitherto undertaken in this war has tended directly to confirm the correctness of his views; while, on the other hand, not one single instance can be quoted which tells against them. He points out, however, what he regards as a misrepresentation, or misapprehension, of his views,—

"There is no ruse," he remarks, "more common in argument than to apply to your opponent's cause some nickname which shall seem to describe it; and when this has, by reiteration, become accepted, to reason from this epithet as if it were a fact. In the present instance it is usual to call this question, '*Earthworks versus Masonry*,' whereas nothing can be more incorrect than such a description. If one must be used, I would suggest '*Guns versus Bastions*,' the fact being, that what I object to in the old system is, that the complication of re-entering and salient angles and flanking defences impedes and neutralises the power of the artillery of the fort to stop or hinder the approaches of the enemy, and at the same time exposes the guns of the fort to be enfiladed and destroyed by the attacking party. To obviate this, I proposed to reduce the outline of the fort to the simplest elementary form, and then showed how, by successive terraces of earthworks, such an overwhelming fire could be brought to bear on the approaches of the enemy as would stop him altogether. If this could be done as cheaply or as efficiently by masonry, I would at once concede that point, considering it altogether unessential; and I am not prepared to say that it may not be done by masonry covered by iron plates, but, till this is tried, earth is the only material known, and therefore I advocate its employment."

It certainly is our own impression (without any special reference back to Mr. Fergusson's previous work), that "Earthworks *versus* Masonry" constituted what might very fairly be regarded as a correct description of his views by contrast with those of a more orthodox official description; and even in the present publication there are passages which we think at least excuse his antagonists for adopting it; but we presume there must have been some misunderstanding on this point.

The author draws attention to rather an instructive little incident in reference to the discussion, on his views, which took place at the United Service Institution, in May, 1853, when invasion from France was deemed more likely than war in the Crimea. When that discussion came on, he remarks,—

"I took with me a few yards of baize, with two or three iron rods, and showed how I would propose to stick them along the crest of the parapet, and to hook on the green baize, letting it drop across the embrasures in front of all the guns. The baize was full of slits, through which the besieged could see or fire, without the possibility of their being seen by the besiegers. This unorthodox expedient was received with 'great laughter,' and afforded an excellent opportunity for criticism during the following three nights. When we entered Sebastopol, we found curtains of rope hung up, exactly as I proposed, across the embrasure, and rope wound round the guns so as to stop the hole in the curtain through which the gun was fired. This rope-cloth, if I may so call it, was rifle-bullet proof, and would probably stop grape, while round shot would pass through without doing it much injury. There can be no doubt that the maintenance of the fire till so late a period was mainly owning to this expedient."

While our military engineers were laughing, Russian *friends* were *thinking;* and it really appears as if young Lieutenant Todleben had then been studying, and reaping the benefit of, such discussions.

In reference to Portsmouth, Mr. Fergusson remarks,—

"Since the pamphlet entitled 'The Peril of Portsmouth' was written, something has been done, and in the direction therein indicated, to place this important position in a better state of defence, but it has been done in such a manner that the *peril* has increased in a tenfold greater ratio than the *protection* afforded is likely to obviate."

All works on the shore at Southampton Water, he is of opinion, are certain to be attacked by land; and it is hardly probable, he thinks, that they will be attacked from sea where the channel is so broad, and while the enemy can land in safety beyond their reach. If this view is correct, he adds, and I have no doubt but that it is so, it is not a little ridiculous to spend such sums as have been spent to defend the Isle of Wight batteries against a land attack, and to leave those on the mainland in such a state that any active man may get into them without either pickaxe or spade. In allusion to the works recently constructed, and which are closely criticised, the author says,—

"In every work described above we have had to point out that great pains have been bestowed in strengthening those points where an assault was either impracticable or least likely to take place, but that the really vulnerable points had at the same time been left wholly or at least partially unprotected. Unfortunately, this system extends beyond individual works to a whole system of defence, and is being carried out at Portsmouth so as to neutralise any advantage, however small, that might accrue from the erection of these defences."

We can only say in conclusion that whatever be the merits of Mr. Fergusson's own system, and of his statements as to that adopted, his observations come with sufficient force to render further inquiry and examination necessary.

Miscellanea.

TESTIMONIAL TO MR. HERBERT MINTON.—The committee appointed to promote the erection of baths and washhouses in Stoke-upon-Trent,—towards which Mr. H. Minton lately offered 500*l.*—have unanimously resolved, "That his recent liberal offer of the sum of 500*l.* towards the erection of public baths in this town affords a desirable opportunity for giving public expression to the regard generally entertained throughout the country for his public and private character." The project, according to the *Stafford Advertiser*, is to erect a public building (by subscription), which shall adjoin the baths, and be appropriated to the advancement of art and literature, particularly amongst the young, and with which Mr. Minton's name is to be associated in perpetuity.

DISCOVERY OF ANCIENT WALL PAINTINGS.—Recent reparations at Hadleigh Church, Essex, have been the means of bringing to light some interesting mural decorations. They are of different periods,—the oldest and best being of the thirteenth century. Among those of a later date is a large representation of the legend of "St. George and the Dragon," with all the accessories, such as the king and the queen, and their beautiful daughter, who was given up to be devoured by the monster.

SECURITY OF LIFE.—By the continuation of staircases right up to the roof, and opening by means of a door at once upon it, a plan adopted by the late Mr. Cubitt, in Belgravia, a great facility of egress is gained in event of fire. Ordinarily there is the treble difficulty of fixing and finding a ladder, opening a trap-door with bolts, possibly stuck with paint, or rusted with age, and then a dormer to be unfastened with the same difficulty with bolts, so that if to this be superadded the confusion and hurry incidental to a fire, it is almost equivalent to no egress at all.—FIRE.

CAMP AT ALDERSHOTT.—Frequent complaints have justly been made of the want of architectural appearance in the buildings here, and the absence of professional assistance in the laying out and arrangement of this camp, where a grand opportunity offered for the application of all the modern improvements in sanitary and scientific construction, and was lost. We are told that a step has been taken with the view of improvement in future, but we shall wait for a result before we say much about it.

DRAINAGE OF LAND IN FRANCE.—A report has been presented to the legislative body at Paris on a Bill to regulate drainage in France. This report details the advantages obtained by drainage on the system of Government aid given in England and elsewhere, as ascertained by special commissioners, and recommends the adoption of a similar principle in France, at least till private capital be attracted to the great profits derivable from the system. The Bill proposes that the French Government shall be empowered to make advances to the extent of 100,000,000 francs, and endows the state or the person who makes the advance with a privilege of payment of interest and capital by instalments in a series of years, taking rank immediately after that of taxation.

TOMB OF WILLIAM COBBETT.—Over the slab which has hitherto covered the grave of William Cobbett, in the churchyard of Farnham, Surrey, a tomb has just been erected by Mr. Thomas Milnes, the sculptor who executed the statue of Nelson, recently put up in Norwich. The tomb is made of a durable stone, from the quarry at Roch Abbey, in Yorkshire. It stands near the porch of the church, is of solid workmanship, oblong in form, and is described as "in style following the plainest old English architecture." Farnham Church is within a mile of Waverley Abbey, and of Moor Park (once the residence of Sir William Temple), and about two miles from Aldershott.

EXPERIMENTS WITH CAST-IRON.—The interesting fact is developed by experiments of the U.S. Ordnance Department, that iron, by repeated fusion, up to a certain number of times, is thereby greatly improved in strength. Guns cast solidly, and those cast hollow, through which latter water was made to circulate after casting, showed an astonishing difference in their relative strength, the difference being in favour of the hollow-cast gun, which is attributed to the method of cooling, the solid gun, contracting from the outside, exerting a strain upon the arrangement of the particles of the metal in the same direction as the strain of the discharges. The experiments also showed that old castings are a great deal stronger than new: 8-inch guns, proved 30 days after being cast solid, stood but 72 charges; 34 days, 84 charges; 100 days, 731 charges; and 6 years, 2,582 charges. This phenomenon is accounted for by supposing that the particles strained in the cooling re-adjust themselves in the course of time to their new position, and become free, or nearly so.—*New York Paper.*

SOCIETY FOR IMPROVING CONDITION OF THE WORKING CLASSES FOR BATH.—A meeting of the citizens of Bath, convened by the Mayor, in compliance with a numerously signed requisition, was held on Saturday in last week, at the Guildhall, for the purpose of considering the propriety of establishing, in connection with the celebration of peace, a permanent Society for Improving the Condition of the Working Classes. The attendance was very numerous, and appropriate resolutions in favour of the object in view were unanimously passed, and some promising subscriptions at once announced.

KILKENNY ARCHÆOLOGICAL SOCIETY.—The May meeting of this Society was held at Tholsel, on the 14th ult., the Dean of the Chapel Royal, Dublin Castle, in the chair, when thirteen new members were elected, besides the Clonmel Mechanics' Institute. Various presentations and communications were received and other business done, and the Rev. James Graves read a paper on the records of the ancient borough towns of the county of Kilkenny.

SURREY ARCHÆOLOGICAL SOCIETY.—The annual general meeting will be held at Croydon, on Thursday, the 12th of June; Sir William G. Hylton Jolliffe, Bart., M.P., Vice-President, in the chair. Some very good papers are promised.

THE SCHOOLS OF ART AND THE GOVERNMENT DEPARTMENT OF SCIENCE AND ART.—The registrar, Mr. Norman Macleod, has had printed a list of the Schools of Art throughout the United Kingdom, in connection with the Department of Science and Art, completed to May 1856. From this list the following abstract may be given:—Established as Schools of Design, between 1841 and 1852, nineteen local schools. Established as Schools of Art, since 1852, when the department was constituted,—in 1852, two schools; 1853, fourteen schools; 1854, fourteen schools; 1855, two schools; 1856, four schools—thirty-six schools: total, fifty-five schools; including the nine London district schools, sixty-four schools. Number of persons under art instruction in public schools, 18,198; in central schools, 9,041: grand total, 27,239 persons.

PARIS BUILDING COMPANIES.—Two Joint-stock Building Companies are announced in Paris, and they are to build whole streets, squares, and boulevards, with theatres and places of entertainment and recreation. The scene of their operations is to be the Champs Elysées and the Neuilly-road, around the Arc de Triomphe, and from thence right and left. They promise to adopt the English plan of making houses suitable for single families, and of turning annual rent into part purchase of property, which at the end of twenty-five years is to become the tenant's ever after.

A CURIOSITY.—At the Barnetby Junction of the Manchester, Sheffield, and Lincolnshire Railway, may be seen, on the hill side, a church which has been whitewashed, body and tower!

HOMERTON.—Parochial schools have just been completed for the parish of St. Barnabas, Homerton, for 150 children, together with a dwelling for the master and mistress. The cost of the schools was 777*l.* and of the dwelling-house 296*l.* Mr. Edmeston was the architect, and the works were carried out by Mr. Perry, of Hackney.

SOUTHWARK IMPROVEMENTS.—Plans have been submitted to us for effecting a better communication from the London-bridge Terminus to the western district of the metropolis, by means of a new street from Wellington-street, Southwark, to Blackfriars-bridge, and from thence forward, *vid* Stamford-street, to Waterloo and Westminster Bridges. The projector of these plans is Mr. Thomas Taylor, architect. Mr. Taylor has shown two lines of communication, each deviating, from York-street, near London-bridge, to one side of the extensive premises of Messrs. Barclay and Perkins, and both ending in a line with Stamford-street. He recommends that along Park-street, or to the north of Barclay and Perkins's, as passing through property of very inferior value, not necessitating the removal of important works, and occupying the present streets one-third the entire length. The opening up of this sadly involved and noxious locality by some great thoroughfare is unquestionably most desirable. It would also form a direct route to the West-end from the London-bridge terminus of railways, and so greatly relieve the traffic of the bridge itself, as well as of Cheapside, Fleet-street, &c.

THE ROYAL SOCIETY AND THE GOVERNMENT.—At a special meeting of the Royal Society, held on the 3rd inst. the following resolution was passed, on the motion of Sir Benjamin Brodie, seconded by Professor Bell;—"That the council be authorized to accept and carry out the proposal of the Government, as to the occupation of Burlington House, on the understanding that the hall, which it is proposed to construct in the west wing, and which is to contain the portraits belonging to the Royal Society, shall be placed in the custody of the Royal Society, subject to the free use of it by the senate of the University of London at all times at which it may be required for their examinations and public meetings." The library of the Royal Society now comprises 45,000 volumes. The Linnean Society and the Chemical Society will also have accommodation given to them in Burlington House.

THE SMOKE NUISANCE.—A Bill brought down from the Lords on the 26th ult. repeals the provision in the 16th and 17th of Victoria, c. 128, which exempts glass and pottery works from the operation of the Act; but the repeal will not take effect until the 1st of January, 1858.

THOROUGHFARES.—I noticed an article in your paper recommending the formation of a street through Lincoln's-inn Fields, "north and south." The utility of such a street no one can deny, but I think we ought also to have one east and west, in continuation of Great Queen-street into Holborn, through the corner of Lincoln's-inn Fields to come out opposite Messrs. Day and Martin's, through Whetstone-park. This would take off immense traffic, which now proceeds round by the Strand into the City. The "bridge" over the Fleet-ditch would soon follow.

London: J. MASTERS, Aldersgate-street, and New Bond-street.

NOTICE to MASONS and BRICKLAYERS—CONSTANT WORK for 200 GOOD HANDS, at 10s. per day. Apply to Mr. OWEN LEWIS, Royal Oak, Saint Mary-street, Cardiff.—Cardiff, June 2, 1856.

TO JOINERS, &c.

TWO or three good FIXERS can find EMPLOYMENT, by applying to Mr. GEORGE PRATT, on the Wells Kingston House, Pembury-road, Tunbridge Wells. None but good workmen need apply.

WANTED, a CLERK, who thoroughly understands the routine of a builder's office.—Apply, between the hours of nine and eleven, at No. 1, Brook-street, Newroad.

TO CLERKS OF WORKS.

WANTED, as CLERK of WORKS, an experienced and thorough practical man, of good address and unexceptionable character. He must be thoroughly acquainted with the building business in all its branches, and fully competent in all respects to take the entire charge of extensive building operations.—Apply by letter only, stating where last engaged, and the salary expected, to A. Z. Office of "The Builder."

TO PLUMBERS, PAINTERS, AND GLAZIERS.

WANTED, for a permanency in the country, a THREE-BRANCH HAND; he must be a good plumber, and able to take the general work of a pottery-shop as working foreman. Age about 35.—Apply, stating references, &c. to A. B. Post-office, Chipping Ongar, Essex. Several good Painters wanted.

WANTED, a STEADY MAN for the country, who unders and Plumbing, Painting, Glazing, and Paperhanging, and can measure and estimate work, and will have the management of the business. Direct, T. L. G. Post-office, Crondon, Hants, near Farnham, Surrey.

WANTED, an experienced SALESMAN of PORTLAND CEMENT and GREY LIME. None need apply who have not experience and connections in the wholesale trade. A liberal salary will be allowed.—Apply to Mr. W. C. ATKINSON, 83, Mo rgate-street, City.

WANTED, a steady Young Man as MILLWRIGHT, at the Cement Manufactory, Faversham, Kent. Apply by letter, addressed to Mr. CHARLES J. HILTON, at the Manufactory, or personally at the Wharf, 6, Upper Thames-street, City, on Friday next, between the hours of Twelve and Two.

TO CLERKS OF WORKS.

WANTED, for about three months, an efficient, respectable MAN, for some alterations and repairs in the country. The references must be very good.—Apply to Mr. K. P. BROWNE, personally, at 14, Royal-place, Greenwich, by NINE o'clock in the morning.

WANTED, ONE or MORE GOOD WORKMEN to take the Carpenters' labour, in carcass of large building, 80 miles from London.—Apply personally, or by letter, to J. P. Victoria Hotel, King's Cross, at TEN o'clock, on TUESDAY, 10th JUNE. References to dispensator, and permanent employment at piece-work if desired.

WANTED, ONE or TWO LADS, who are able to TRACE DRAWINGS neatly.—Apply, by letter, prepaid to Y. L. X. care of Cartwright and Son, Brownlow-street, Holborn.

WANTED, a YOUNG MAN who has been used to Church Lead-Glazing and has also a knowledge of Plumbing, &c. Reference required.—Address, prepaid, to A. B. Office of "The Builder," stating wages, &c.

WANTED, in an Architect's Office, a steady, respectable CLERK, to copy writing, keep accounts, and able to trace. Must write well, be quick at figures, and make himself generally useful. Salary to commence at 65*l.* per annum. Address, A. O. Mr. Scripps's Advertising and Newspaper Office, Southmolton-street, Bond-street.

TO HOUSE PAINTERS, GRAINERS, AND DECORATORS.

WANTED, in Worcestershire, a thoroughly competent PERSON, to MANAGE the PAINTING DEPARTMENT, in a builder's establishment, where from eight to a dozen men are employed. He must be capable of graining in the best style; also of executing ornamental work and interior decoration generally. A permanent situation will be guaranteed to any person who is thoroughly qualified. No others need apply who cannot produce satisfactory testimonials.—Address, A. B. Mr. Nixon's, Carver and Gilder, Steelhouse Lane, Birmingham.

WANTED, a SITUATION as CLERK of WORKS by a thorough practical man; is a good draughtsman, and is competent to prepare working drawings; has first-rate testimonials from previous employers.—Address, C. D. 28 Harrington-street North, Hampstead-road.

TO BUILDERS.

WANTED, a SITUATION as SHOP or FOREMAN of WORKS, by an experienced man, well versed in both situations, having filled both with credit in the large establishments to whom he will refer.—Address, A. B. 37, East-street, Walworth.

TO BUILDERS AND CONTRACTORS.

WANTED, a SITUATION with either of the above, by a Young Man, respectably connected, who is well versed in the routine of the office, both in measuring and measuring, and is also competent to superintend building works.—Address, A. C. 10, Richmond-street, St. George's-road, Southwark.

TO PLUMBERS, PAINTERS, AND OTHERS.

WANTED, by a Young Man, a permanent SITUATION as a THREE-BRANCH HAND, gasfitting if required. A satisfactory reference can be given.—Address to A. Y. 9, Ann-street, Cobourg-road, Old Kent-road.

TO CARPENTERS AND BUILDERS.

WANTED, by the Advertiser, aged 21, a SITUATION as IMPROVER, at the bench or in a builder. Wages not so much the object as good improvement. Can have a good reference from the builder with whom he was apprenticed.—Address, J. T. P. Office of "The Builder."

WANTED, by an experienced practical MASON, who thoroughly understands his business in marble and stone, wishes to obtain the SITUATION of FOREMAN, or to take the Management of a Business, in town or country. Can give the first of reference.—Address, M. J. 41, Basing-place, Water-road, London.

WANTED, by a respectable Man, a SITUATION as SHOP or GENERAL FOREMAN. References as to character and ability.—Address, H. R. Post-office, Hornsey.

TO PAINTERS, DECORATORS, &c.

WANTED, by the Advertiser, who has a thorough knowledge of writing, graining, grass-embossing, and general decorating, a SITUATION as FOREMAN, or otherwise. Can estimate, take out quantities, and is a good accountant. Country not objected to.—Address, X. Y. 43, Queen-street, Camden-town.

WANTED, by a first-rate Draughtsman, Writer, and Colourist, an ENGAGEMENT, to make finished maps and plans of estates, towns, parishes, railways, docks, drainages, &c. ARCHITECTURAL and MECHANICAL DRAWING CLASSES.—The Architects', Builders', Civil Engineers' and Students' Drawing Classes, Offices, 15, OLD STREET, CITY ROAD, conducted by THOMAS J. HILL, Architect, &c. The class of Drawing taught at this Establishment is designed expressly for Architects', Builders', and Engineers' Sons, Assistants, and Clerks of Works, &c. The Drawings are all practical, and every facility is given to the pupils to acquire a thorough knowledge of the department they wish to learn. Taking out Quantities and Abstracting from Plans, and afterwards from the Building. Detail Prospectuses of the Morning and Evening Classes, together with a list of references, chiefly Architects, Builders, Engineers, &c. to be had at the Offices.

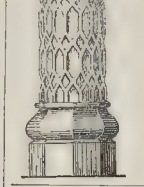
PUBLIC EXAMINATIONS in FREE-HAND and MECHANICAL DRAWING.—Notice is hereby given, that Examinations in Free-hand and Mechanical Drawing will be held by the Department of Science and Art at Marlborough House, Pall-mall, in July next. The Examinations are not limited to students in the Schools of Art, but are open to all who intimate, on or before 1st July, by letter to the Registrar, their desire to be examined, and produce satisfactory specimens of their proficiency at the day of examination, which will be hereafter announced. Prizes of Instruments and Certificates will be granted to all who pass the requisite examination.

NORMAN MACLEOD, Registrar.

MATHEMATICAL DRAWING INSTRUMENTS. JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.



N.B. A few New and Second-hand Levels and Theodolites always for Sale.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading and Tinting; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms: Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS

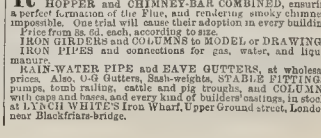
PERSPECTIVE, COMPETITION, and other DRAWINGS prepared by an experienced Architectural Draughtsman and Colourist, on reasonable terms. Temporary assistance rendered in getting out quantities, or working drawings, &c. Specimens in drawing and colouring can be produced.—Address, M. Z. A. Post-office, High Holborn.

ROYAL POLYTECHNIC.—Patron, H.R.H. PRINCE ALBERT.—On Monday, Wednesday, and Friday, at Four and Nine, the Grand Series of Views after David Scott, as published by Fullarton and Co. illustrating Bunyan's Allegory of the Pilgrim's Progress, with Descriptive Lecture by the Rev. J. B. Brasted. On Tuesday, Thursday, and Saturday, at Three, Lecture by J. H. Pepper, esq. on "The Moon Controversy." On the same days, at Four and Nine, the Historical Entertainment of Kenilworth; and at 7.30 and 8. Performances by Mademoiselle Mundie on the Cither, and by Herr Zironi on the Child's Mouth Organ. All the other Lectures on Chemistry, the Electric Light, and Photo Galvanography as usual; daily exhibition of the new and large Model of Sebastopol, mounting 2,000 guns and mortars. Admission to the whole, 1s.; children and schools half-price.

H. DOULTON & CO'S.
TERRA-COTTA CHIMNEY-TOPS
Will withstand the action of the Weather and Sea Breezes, and are
QUITE IMPERISHABLE.
Prices not much higher than Cement.
DOULTON & CO.'S
TERRA-COTTA POTS, &c.
Erected in London upwards of 20 years since, are now as sharp and perfect as when first manufactured.
Drawings on application to
H. DOULTON & CO. High-street, Lambeth

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an



EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 195, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c

GARDNER'S PATENT SMOKE-CONSUMING APPARATUS may be seen in successful operation in many places. Saves 30 per cent. fuel, and is entirely new. A Mr. Woodcock having made assertions affecting this patent, the patentee will perfectly satisfy all parties of the incorrectness of such statements.—24, Norfolk-street, Middlesex Hospital; or to the Makers, Messrs. BURBIDGE and HEALY, 118, Dorset-street, Fleet-street

VENTILATION.—J. KITE, Patentee for Ventilating and Smoke-consuming Operations.—Churches, chapels, schools, club houses, public buildings, stables, &c. effectually ventilated, upon a new and economic system. Also, the New Patent Albert Chimney Cap, for the cure of smoke, patronised by her Most Gracious Majesty, and now on Buckingham Palace; in use also on St. James's Palace, Claremont, Windsor Castle, Government buildings, &c. Wrought iron, 25s.; galvanized ditto, 30s.; cast iron, 35s. each, the latter as durable as the building itself. Illustrations and testimonials forwarded on receipt of two postage-stamps.—Depôt, BARTON'S Ironworks and Manufactory, for the Patent Stable Fittings and enamelled Mangers.—Address, JAMES BARTON, 370, Oxford-street, London

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 3s. 6d. each, according to size.

IRON GIRDERS and COLUMNS to MODEL or DRAWING.

IRON PIPES and connections for gas, water, and liquid manure.

RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O-G Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground street, London, near Blackfriars-bridge.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewerage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14 South Wharf, Paddington.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall Isle of Dogs.
Warehouse, No. 1, Wharf, Paddington-basin.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale or retail, at his wharf, &c., Upper Thames-street, London, or also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Manure, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzdano
11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS Millbank street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Red street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tunnel work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements used at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to whom the PRIZE MEDAL was awarded in 1851 are prepared to supply any quantity of their best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS. The London and West of England Cement Company, sole offer at the trade list prices. HALF MAKE OF CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the trade. Communications to be addressed to the General Offices, 80, Old Broad-street, London; to Mr. M'NIBEN, 4, Cornhill place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.
Agents for the Works—TATHAM'S WHARVES.
Agents in London, Messrs. GEORGE POTTER and CO. Limemerchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 19, North wharf-road, Paddington.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality, Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms.—Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 29, Moorgate-street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

PORTLAND and ROMAN CEMENTS.
BLYTH, BROTHERS,
16, SOUTH WHARF, PADDINGTON,
AND PLASTER WORKS,
BALDWIN'S PLACE, GRAY'S-INN LANE.

GREY STONE LIME WHARFS,
12, UPPER GROUND-STREET, Blackfriars (Surrey side),
7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME, in any quantities from the above wharfs, or per large direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

DAMP WALLS.
STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,
Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.
Prepared only by W. J. STENT, Westminster.
London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin

MEDINA CEMENT CONCRETE BUILDINGS.
This mode of applying cement is suitable for sea groyne, sea walls, and for soldiers' huts, emigrants' dwellings, temporary churches, school-houses, and workmen's cottages, all of which may be built with greater rapidity and economy than with any other materials; good cement and sea beach, or washed gravel stones, only necessary.
A sea groyne 200 feet in length, erected four years since in Sandown Bay, Isle of Wight, is a perfect specimen.
Two concrete models may be seen at FRANCIS' BROTHERS', Cement Works, Nine Elms, London; and two soldiers' huts have been built by them for the Government, at Shorncliff Barracks, near Sandgate, Kent.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead, whilst the consumption of material is less than for one coat. It dries very fast and is a
HUBBUCK'S STONE COLOUR BODY PAINT, the same as the former, at three-fourths the price.
HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and iron exposed to salt water; neither blue water, nor noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages, stamped HUBBUCK'S, London. Patent, and when so marked the quality is guaranteed.
HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. It may be coated with this Enamel instead of being attacked by the worm neither do barnacles attach to it.
Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.
OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for manufacturing the above CEMENT, begs to inform the trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality for sound and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—Messrs. GREAVES and R. KSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway. Greaves's Blue Lias Lime Portland, Bath and Lias Cement Works, at Harbury, Stockton, and Wilmcote, Office, or Warwick.

CHARLES RICHARDSON,
3 & 6, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY AND KENT BRICKS,
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES,
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.
3 & 6 South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the shortest time it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London

BLUE LIAS LIME.—CHARLES NELSON can supply direct from the Works in his vessels to any part of the Thames adjacent to the Docks, River Lee, or canals, lime as cut to any part of the kingdom, as specimens of the above GENUINE HYDRAULIC LIME, now so extensively used.
Quality, Weight, and Measure may at all times be strictly relied on, references in proof of which can be given.
N.B. The Captain of the Boat will always be with him the first load or two, and will show the consignee what weight of Lime he is paying for.
All orders addressed to the—
LONDON DEPÔT, 16, SOUTH WHARF, PADDINGTON,
BLYTH, BROTHERS, SOLE AGENTS,
Will be promptly attended to, and any further information can be obtained from them.
Works, Stockton, Sold, near Southam, Warwickshire

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis, on extra charge in the case of any wharf or railway station in London. Any further information can be obtained at their Works, Baldwin's-place, Gray's-inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pukimas of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.
Malm Place half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Countinghouse, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Fresh Loam, Whiting, Whiting Sand for asphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick making, &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 200 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above named articles can also be procured, as well as all kinds of fire goods (not) Welsh and Newcastle Fire-clay, Flared burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.
General Office No. 12, GEORGE YARD, LOMBARD-STREET
Letters addressed to Grays Essex, will meet with immediate attention.

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane Dulwich. Price of good stock bricks, 25s. per thousand on the field, for cash.—Application to be made to the Foreman, A. BANHAM, at the Works.

Also, STOCKS, of FIRST QUALITY
J. PASTWOOD and SONS, Belvidere-road, Lambeth.

PRIZE BRICK MAKING MACHINE.—Chamber's Patent.—This portable machine will make 20,000 solid bricks per hour, of superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and one to remove the bricks. For a plate and description see "Practical Mechanic's Journal," for March, 1856. For further information, or the machines seen at work on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey near Worcester.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES, now offered to the trade. Waterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday.
HENRY C. MOUNT, Sec.
37, King William Street, City.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies no room, of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 3d. per foot. This charge to include tiles delivered in Agent's yard, or neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPÔT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor, and, thirdly, that the "Reports of the Jurors," page 583, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Stafford-shire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical and Alhambra Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fire-grates and Hearths, Copings for Grates, Door Furniture, White Glazed and other Metallic Tiles for Baths, Dairies, and Kitchen Ranges, many hundred great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

CLARK AND CO. 15, GATE-STREET, LINCOLN'S-INN-FIELDS.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS, HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S COMMISSION OF CUSTOMS, HER MAJESTY'S ESTATE, ISLE OF WIGHT,
HONOURABLE EAST-INDIA COMPANY, ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a superior burning of heat and sound. The Felt can be cut to any length, by 36 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. There are likewise ASPHALTED FELTS AGAINST MUSCHAMS AT VENICE, now at work in Great Britain, where the above roofing is made. Apply to F. McNEILL and Co.'s Manufactory, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

R. RICHARDS and CO.
PUMP MANUFACTURERS
and ENGINEERS

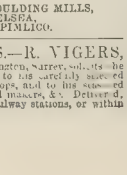
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.



N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 24s per doz. painted.
Ditto .... 48s per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard the cumbrous carriage work, expensive chains and guides are unnecessary, rendering the price considerably less than Pumps made on the Hydra.
Best and Water Engines for raising fluids from a depth not exceeding 28 feet, also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at				3d. per foot.
4	"	"	"	4d.	"
6	"	"	"	6d.	"
9	"	"	"	9d.	"
12	"	"	"	1s. 6d.	"
15	"	"	"	2s. 6d.	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of which can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 28s. and perfect action guaranteed.

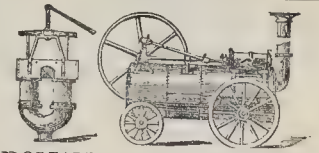
TO WATER COMPANIES AND PLUMBERS.



HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

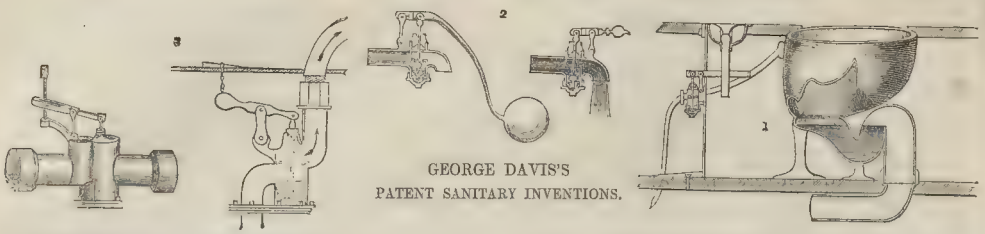
PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

CONTRACTORS' STEAM-ENGINES.—TO BE LET, on HIRE, or for SALE, several NEW and SECOND-HAND STEAM-ENGINES, of various powers, suitable for contractors' work generally.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, Blackfriars-road, where they may be seen.

PARSEY'S REVOLVING STEAM-ENGINES and PUMPS (the accomplishment of circular motion).—As steam engines are better than all others; and as pumps, being all metal, are equally good for hot or cold liquors; and having no packing, are not liable to choke, and are a vast improvement on pumping and for ships' pumps. To be seen at Mr. PARSEY'S Depôt, Great Scotland-yard.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.



JAMES BURTON & SONS,

Engineers and Contractors, John's-place, Holland-street, Southwark, London.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PLIGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TO WATER COMPANIES AND BOARD OF HEALTH COMMISSIONERS.

GEORGE DAVIS'S
PATENT SANITARY INVENTIONS.

G. DAVIS begs particularly to call the attention of Water Companies, &c. to his recently Patented Inventions. The Sanitary Closet and Valve is the most simple and effectual Apparatus for common purposes yet introduced to the public. The advantages it possesses over all others will be evident to every practical person, at first sight. Its superiorities consist in the following desiderata: — The Basin is so constructed, that instead of the water running round the sides of the Trap, it is precipitated into the centre, which flushes the Trap effectually with one half of the water usually required. The Handle of the Closet Apparatus is so arranged, that it cannot be Tied or Trigged up, and the Valve closes with the pressure, without weights or springs, and without concussion. The Bib and Ball Cocks are unequalled for High Pressure, and are perfectly self-closing, without concussion. Hydrants and Sluice Cocks are also manufactured on this Patent Principle, and nothing can be more simple or effectual. The Valves are of Indian Rubber, enclosed in a box so as to prevent wear, and they can be set into action in one second, in case of fire, and will not hang up or get deranged in any way. When closed, the pressure tends to keep them from leaking, and all the working parts are kept from the water when shut off.

For full Particulars, Prices, &c. apply to the Patentee and Manufacturer,

GEORGE DAVIS, MARLAND-PLACE, SOUTHAMPTON.

GREAT REDUCTION IN PRICE OF DOULTON'S DRAIN-PIPES.

HENRY DOULTON AND CO.

Beg to inform Builders, Contractors, and others, that they have made a considerable REDUCTION in the PRICES of their

GLAZED STONEWARE DRAIN-PIPES,

Drawings and Prices will be forwarded on application.

MANUFACTORIES: HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE and SMETHWICK, near BIRMINGHAM.

OFFICES: HIGH-STREET, LAMBETH, LONDON.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c

THE BRANKSEA POTTERY,

NEAR POOLE, DORSET.

GREAT REDUCTION IN PRICES OF DRAIN-PIPES.

TO THE METROPOLITAN BOARD OF WORKS, DISTRICT BOARDS, BOARDS OF HEALTH, TOWN COUNCILS, IMPROVEMENT BOARDS, SURVEYORS, AND BUILDERS.

THE BRANKSEA POTTERY and CLAY COMPANY are prepared to supply all descriptions of Glazed Drain-pipes, Bends, Double and Single Junctions, Closet-pans, &c. Also, Terra-cotta Chimney-pots and Fire-bricks of a very superior quality at moderate prices.

N.B. A LIBERAL DISCOUNT TO THE TRADE. A LARGE ASSORTMENT OF GOODS CONSTANTLY ON SALE.

The clay obtained from the pits on the island of Branksea is of the finest quality, and the goods are manufactured by men of long experience in the trade, with the aid of powerful machinery. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.

A list of prices forwarded free on application to Mr. T. G. BECK, at NEW WHARF, No 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTS, at the Works, Branksea Island, Poole, Dorset.

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,

LAMBETH POTTERY, HIGH-STREET, LAMBETH,

Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to

5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of closet-pans.

UNDERHAY'S PATENT REGULATOR CLOSETS

for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in Fixing, and a better flush of water is obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on the principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stop-valves are cheaper, stronger, and more certain, than any other. Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES TUNN and SON,
Brass Founders, Great Russell-passage, Clerkenwell, London.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 25, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP

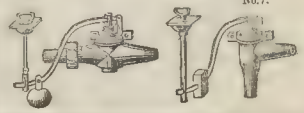
FOR STREET USE.

Price, with Gutter Plate, 18 inches by 12 inches, each 25s.; weight about 2 cwt. Larger sizes made, if required.

FOR AREAS, &c.

Price, with Back Plate, 8 inches by 7 inches, each 6s.

FOR COURTS, YARDS, &c.



10 inches by 8 inches, each 10s.

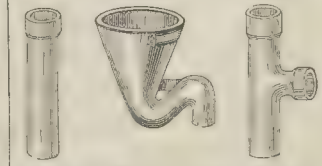
The above articles are protected for the Patentee by the British Government, as an object of their consideration for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water used in the pan. When stench-traps are put down generally speaking no attention is ever paid to them afterwards—this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves last those places where there are is vitiated by odours or gases proceeding from drains, &c.

Any individual suffering any nuisance, is entitled, by the Sanitary Act to lay complaint before the public or private authorities of the property, to lay down stench-traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings and if wishful, testimonials. Please order from any respectable ironmonger, contractor, or the Patentee, JAMES LEWIS, Ironfounder, Abergavenny. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

No. 7.

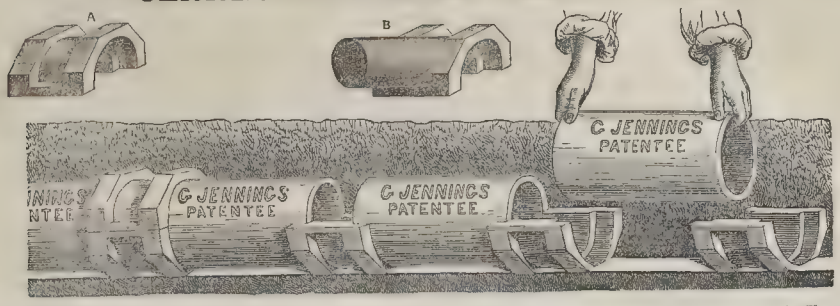
is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,



THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Silver-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price complete, 13s. 6d. each.

TO LOCAL BOARDS of HEALTH.



SURVEYORS, &c.—The Best and Simplest MACHINERY for CLEANSING CESSPOOLS, DRAINPIPES, &c. including everything that is required, can be obtained from R. BARRETT and SON, Brass and Iron Founders, Bermondsey-street, Barbican, London, who will furnish prices on application.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment,—Falcon Wharf, 80 Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

JENNINGS'S PATENT DRAIN-PIPES.

THE PATENT CHAIRS AND SADDLES above shown are to a line of pipes the SAME SUPPORT AS SLEEPERS TO A LINE OF RAILWAY, the base of each Chair being BROAD and STRONG. The pipes are simple cylinders, of uniform thickness, made without the usual socket; the drying and burning, in consequence, is much more perfect. Pipes thus made and connected will be found to BEAR ANY PRESSURE, and are in no way liable to derangement. The laying of these pipes, and the making of the joints, IS DONE AT ONCE, EACH PIPE BEING BEDDED AS IT IS LAID, and the space between allows the workman to strike up the joint, and the superintendent TO SEE that every pipe is ACCURATELY LAID and PROPERLY JOINTED.

A shows one of JENNINGS'S PATENT SADDLES OR COVERS, by means of which examinations are effected; B shows one of the PATENT JUNCTION COVERS, by which connections are made to finished lines of pipes, it being only necessary AT ANY TIME to remove a PLAIN Cover or Saddle, A, and substitute a Junction Cover, B, the Junction being THE SIZE of the Branch Pipe.

The favour with which these pipes have been received will no doubt give rise to many imitations, as it is much easier to COPY than to INVENT; but GEORGE JENNINGS hopes his sanitary patrons will give HIM CREDIT for being THE FIRST TO SHOW HOW JUNCTIONS MAY BE INTRODUCED, OR EXAMINATIONS MADE, TO FINISHED LINES OF PIPES. These important improvements, as above shown, are PATENTED; and GEORGE JENNINGS would caution those who desire TO PROFIT BY HIS IDEAS, NOT TO INFRINGE HIS PATENT RIGHTS, as they will not be allowed to do so with impunity, although he feels confident the ORIGINAL, for its SIMPLICITY and EFFICIENCY, will be preferred to any copy.

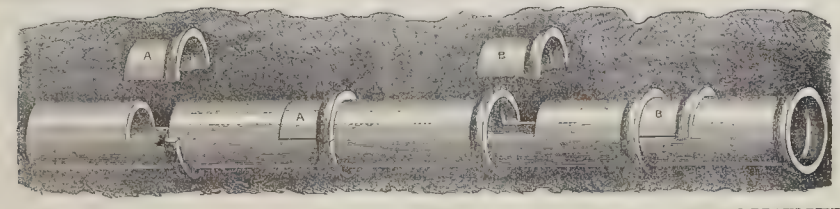
Prices of JENNINGS'S Drain Pipes, per foot run, including the Patent Chair and Saddle, are as follows:—4-inch, 6d.; 6-inch, 8d.; 9-inch, 1s. 1½d., 12-inch, 1s. 10d.; 15-inch, 3s.; 18-inch, 4s.; with the usual discount to the Trade.

JENNINGS'S PATENT DOUBLE-SEATED VALVE-CLOSET.

Architects describing this Closet in their specifications will have a PERMANENTLY GOOD VALVE CLOSET, NOISELESS, and FREE FROM COMPLICATION. The Patentee has such confidence in its DURABILITY and EFFICIENCY, that he will guarantee every Closet for SEVEN YEARS.

JENNINGS'S IMPERISHABLE EARTHENWARE CLOSET AND TRAP.

This Closet has a large water surface, has no back to soil, is imperishable in its material, and the Trap and Closet is combined in one piece, suited alike for the PALACE or the COTTAGE.



JENNINGS'S IMPROVEMENTS IN LIFT AND OTHER PUMPS.

These Pumps would well repay a visit to Jennings's factory, where may be seen Jennings's Lavatories, Urinals, Sluice Valves, Fire and Steam Cocks, of every size; Shop-Shutter Shoes; Gully, Area, and Sink Traps, and other sanitary goods.

Or Illustrations and Prices can be had free by post, if two stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON

AYLESFORD POTTERY COMPANY'S PATENT DRAIN-PIPES.

THE above Company respectfully invites the attention of Engineers, Architects, Surveyors, Builders, &c. to an improved DRAIN-PIPE, whereby al stoppages may be cleared without disturbing the invert of the drain, by simply removing the cover (marked A or B) whichever may be preferred.

The cover (marked B) may be used in conjunction with whole or half-socket Pipes.

Pipes thus constructed may be laid at intervals in a drain of ordinary Socket-Pipes.

With the great advantage these Pipes offer, they are cheaper than any yet submitted to the public.

London Depôt—AYLESFORD WHARF, Belvedere-road, Lambeth.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

MACFARLANE'S PATENT

CAST-IRON PUBLIC WATER-CLOSETS AND URINALS,

FOR STREETS, RAILWAY STATIONS, WORKHOUSES, FACTORIES, BARRACKS, SCHOOLS, &c.

WALTER MACFARLANE and CO. having been engaged for several years in perfecting and testing their WATER-CLOSETS and URINALS for public purposes in their own city, beg now respectfully to submit them to general notice.

WATER-CLOSETS.—The simplicity of their construction and durability peculiarly fit them for public purposes. They require no cistern nor water pressure, are as efficient with an intermitting as with a constant supply of water, do as well with waste water as with clean, and require less than any closet in use. The whole working gearing is entirely out of the control of the persons using the Closet, and no action of any part takes place except for a few minutes once a day. They are made in ranges, to accommodate any number of persons; and when required for streets or other public situations, are inclosed in a neat cast-iron structure, with or without separate compartments and doors.

URINALS.—These are simple and durable in their construction, and adapted for all situations. Those for street use are of easy access, occupy very little room, and of a neat ornamental design. They can be fitted up on the most suitable parts of a street without in the least detracting from the general amenity of the neighbourhood, and made in ranges, to accommodate any number of persons.

WALTER MACFARLANE & CO. PATENTEES AND MANUFACTURERS,

SARACEN FOUNDRY, GLASGOW.

LONDON AGENT—THOMAS BEGGS, SANITARY ENGINEER, 37, SOUTHAMPTON-STREET, STRAND.

For Drawings, Prices, and Particulars, apply as above.

SALES BY AUCTION.

TO IRONFOUNDERS AND OTHERS

MESSRS. FULLER and HORSEY will SELL by AUCTION, on MONDAY, JUNE 16, 1856, at TWELVE, at the AUCTION MART, Bartholomew-lane, by direction of the Assignees of R. J. Nelson, a Bankrupt, in lots, with at reserve, 650 tons REJECTED SHELLS, from 8 to 20 inch, to 12 inches, made of mixed cold-blast and Scotch iron, and lying at the Royal Arsenal, Woolwich. Particulars may be had previous to the Sale by orders.—Catalogues may be had of Gs. A. ASHLEY, Esq. Solicitor, 7, Old Jewry; at the Mart; and, with cards to view, of Messrs. FULLER and HORSEY, Billiter-street, City.

Valuable and important Estates, St. Pancras, by order of the Vestry of the Parish of St. Pancras

MESSRS. DENT and SON have received instructions to offer for SALE by AUCTION, on WEDNESDAY, JUNE 11, the very valuable and extensive LEASEHOLD PREMISES, situate 11, Edward-street, Hampstead-road, St. Pancras, heretofore the board-room, offices, stone-yard, and premises of the Southampton Paving Commissioners now transferred to the vestry under the Metropolis Local Management Act, held under Lord Southampton for a term of which sixty-five years will be unexpired at Michaelmas next, at a ground-rent of £31 12s.; also, a Leasehold House and Premises, No. 7, on the south side of Charlestreet, Fast, originally erected for the said Commissioners, held likewise under the Southampton estate for a term of which fifty-two years will be unexpired at Michaelmas 1856, at a ground-rent of £7 15s. per annum; the latter understood for a term of twenty-one years from Mid-summer 1849, at £92. per annum, the under lessee having substantially repaired and improved the property.—Particulars and conditions of sale, with plans, to be had on the Premises; at the place of sale; at the Vestry Clerk's Office, Old St. Pancras, where the leases may be seen; and of Messrs. Dent and Son, Surveyors, 36 Southampton-buildings, Chancery-lane, and 38, High-street, Camden-town.

CAMDEN-TOWN.—Valuable Premises, formerly the Board-room of the Commissioners of Paving for the Camden Estate.

MESSRS. DENT and SON have received instructions from the Vestry of the Parish of St. Pancras, in whom the above property has become vested under the Metropolitan Local Management Act, to offer for SALE, by AUCTION, on WEDNESDAY, JUNE 11, all those substantially erected and valuable PREMISES with the spacious Yard and Appurtenances, situate No. 10, on the north side of Pratt-street, to which there is a frontage of 29 feet 8 inches, by a depth of 150 feet; held under the Marquis Camden and Prebend of Cantlowes for a term of which 71 years will be unexpired at Michaelmas, 1856, at a ground-rent of 16l. per annum.—Further particulars and conditions of sale, with plans, to be had on the Premises; at the Place of Sale; at the Office of the Vestry Clerk, Vestry-hall, St. Pancras Old Road; and of Messrs. Dent and Son, Surveyors, 36, Southampton-buildings, Chancery-lane, and 38, High-street, Camden-town.

The Valuable and Important Freehold Manor of Newington, Barrow, otherwise Highbury, in the Parish of St. Mary, Islington, in the County of Middlesex

MESSRS. DENT and SON have received instructions to offer for SALE by AUCTION, at GARRAWAYS COFFEE-HOUSE, Change-alley, Cornhill, on WEDNESDAY, the 18th of JUNE next, the above most valuable and improving MANOR, heretofore parcel of the possessions of the Crown, with all the customary advantages, arising from courts baron, courts leet, courts of survey, fines at the will of the lord, on death or alienation, quit rents, royalties, and all rights, members, profits, emoluments, and appurtenances thereto belonging. By a survey made by order of Henry Prince of Wales (the eldest son of King James I.) in 1611, the Manor was found to contain nearly 1,000 acres, of which 113a. 3r. 0p. were freehold, 407a. 2r. 4p. demesne lands, and 444a. 1r. 0p. were copyhold of inheritance. By the custom of the Manor, two years' improved rent is payable to the lord on death or alienation. The quit rents payable at this time amount to £s. 19s. 7½d. per annum, extending over very valuable property, estimated at upwards of 1,300l. per annum, exclusive of those in abeyance. The emoluments to be expected to arise from lands and premises, from which the quit rents and customary fines and payments have been omitted to be enforced, or are in abeyance, are very considerable; and the whole forms an important investment in every respect worthy the attention of gentlemen of the legal profession or the capitalist. Particulars and Conditions of Sale with a plan of the Manor are in progress, and will shortly be ready at the Place of Sale; the Angel Tavern and the Blue Coat Boy at Islington; the Gate House, Highgate; the Archway Tavern, Upper Holloway; the Compasses at Finchley; the Plough, Hornsey-road; at the Offices of B. W. POWYS, Esq. Solicitor, 38, Russell-square; and of Messrs. DENT and SON, 36, Southampton Buildings, Chancery-lane, and Camden Town.

SOUTHALL, MIDDLESEX.—Compact Freehold gentlemanly Residence, Park-like Grounds, Pleasure and Kitchen Gardens, Farm-yard, and Seventeen Acres of rich Meadow Land, close to the railway station, a portion of which is admirably adapted for building societies, with immediate possession.

CHINNOCK and GALSWORTHY have been favoured with instructions to SELL by AUCTION, on THURSDAY, the 26th of JULY, at TWELVE o'clock, at the AUCTION MART, London (unless previously disposed of by private treaty), the important FREEHOLD (and small part Copyhold) ESTATE, late the residence of Mrs. Lawes, situate near the high road, at Southall, comprising a good square built family house, stable, double coach-house, delightful pleasure and kitchen gardens, fish-pond, park like grounds well timbered, and seventeen acres of superior meadow land in high cultivation; the whole lying in a ring fence.—Descriptive particulars, with plans, may be obtained of Thos. Browning, Esq. Solicitor, 1, Hatton-court, Threadneedle-street; of Geo. Wales, Esq. Surveyor, Great St Helen's; and at the Auctioneers' Offices, 28, Regent-street, Waterloo-place

TO BUILDERS.—Peremptory and Important Sale of Twenty-three unfinished Residences, forming Lansdowne-crescent Terrace, formerly known as St. Columb-terrace, Kensington-park, Notting-hill.

MR. ROBINS is directed by the Mortgagee to SELL by AUCTION to the highest bidder, at the MART, on FRIDAY next, JUNE 13, at TWELVE, in 53 Lots, a noble Terrace of TWENTY-THREE SECOND-CLASS RESIDENCES in CARASS, forming Lansdowne-crescent Terrace, formerly known as St. Columb-terrace, Kensington-park, Notting-hill. The development of his most attractive estate is rapidly advancing towards completion, and it is considered that the character and position of these houses will, as soon as finished, command tenants of the first respectability, the accommodation proposed being of a most liberal character, whilst the healthy and salubrity of the air offer more advantages than any other situation round the metropolis. There is a garden to each house opening to an ornamental pleasure-ground at the rear. The houses are held for a term of 95 years, at a ground-rent of 21l. a-year each, and 9l. 9s. a year each to the ornamental pleasure-garden, and this premium when completed will readily let at 45l. 9s. per annum. May be viewed daily, and particulars had on the Premises; at the Clarendon Hotel, on the Estate; of Messrs. Rod and Carpenter, Solicitors, Lewisbury; at the Auction Mart; and at Mr. Robins's Offices, Covent-garden.

N.B.—No reserve bidding whatever will be made by the vendor.

Capital New Building Materials, Bridge-wharf, Old Ford-road, Victoria-park, near the City of Paris Tavern.

J. G. HALL will SELL by AUCTION, on WEDNESDAY next, JUNE 11, at TWO precisely, by order of Mr. Wright, the second portion of seventy loads of capital yellow and white SALT, yellow, white, and pine deals and planks; Norway and spruce battens, 50,000 three-quarter and one-inch floor boards in 600 feet lots quartering 5000 feet in 1 to 12-inch battens, 30,000 feet prime yellow joist, 10,000 feet featheredge boards, 100 bundles of pantile laths, fifty new panel doors, &c. &c.—On view the day prior and morning of sale; catalogues at Wharf-cottage, on the premises; at the Lord Nelson and City of Paris Taverns, Old Ford-road; Alfred's Head, Cambridge-road; Marquis of Cornwallis, Old Ford; Rose and Crown, Bromley; Abbey Arms, Plaistow; Yorkshire Grey, Stratford, Shadie, Woodford; Red Lion, Ilford; Fox and Hounds, Romford; and of the Auctioneer, 8, Cranbrook-street, Old Ford-road.

SALES BY AUCTION.

Valuable New Materials to be removed from the Green and Hyde Parks

MESSRS. EVERSFIELD and HORNE beg to announce that they will SELL by AUCTION, on MONDAY, JUNE 16th, at TWELVE precisely, the Valuable New MATERIALS of the temporary buildings erected in these Parks, &c., in connection with the late display of fireworks. The Sale will be held at the Grand Stand, Hyde Park Corner, Piccadilly, and the Materials may be previously viewed. Catalogues to be had of the Auctioneers, 40, Parliament-street.

PRIMROSE-HILL AND VICTORIA-PARK.—VALUABLE NEW MATERIALS.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Primrose hill, at ELEVEN, and Victoria-park, Bethnal-green, at ONE for TWO, on TUESDAY, JUNE 10, the MATERIALS and FITTINGS of the temporary erections used in connection with the late displays of fireworks, comprising a large quantity of excellent 4-inch boarding, numerous principals, rafters, quartering, whole timber uprights, iron sashes, posts and rails, and other useful materials.—May be viewed, and catalogues had on the Premises; and of the Auctioneers, 40, Parliament-street, Westminster

PIMLICO.—LARGE CHIMNEY-PIECES, &c.

MESSRS. EVERSFIELD and HORNE are instructed to SELL by AUCTION, on FRIDAY, JUNE 13, at TWELVE, at the MARBLE SHOW ROOMS Belgrave place, about 150 CHIMNEY-PIECES, in marble, stone, and alabaster, several of which are of rare acquirement, and others of a plainer character; also, a Gothic Caen stone monument; an alabaster ditto, with statuary tablet; several wall tablets, and two marble vases. May be viewed three days previous, and catalogues had on the Premises; and of the Auctioneers, 40, Parliament-street, or Coal-Exchange.

PORTPOOL-LANE. Valuable Builder's Stock of seasoned Timber, Plant, Implements, and Effects, on the Premises of the late Messrs. Locke and Nesham.

MESSRS. EVERSFIELD and HORNE are instructed by the Executors to SELL by AUCTION, on the PREMISES, Portpool-lane, Gray's-inn-lane, on WEDNESDAY, JUNE 18th, and two following days, at TWELVE for ONE each day, the FIRST PORTION of the valuable STOCK and EFFECTS, which will comprise a large quantity of well-seasoned yellow and white deals and battens, prepared floor-boards and battens, pine plank, thirty loads of timber in the docks, die square timber and quartering, oak sills, dry wainscot and mahogany blocks of Portland and other stone steps and paving; also, several builder's carts, stone-trucks, timber-carriage; scaffold boards, poles, and pullops; crab-engines, bootting-jacks, blocks and falls; ladders, wheeling planks, barrows, pile-driving engines, and monkeys; saw-tackle, a new travelling-crane, the contents of the joiners', plasterers', painters', and smiths' shops; new and old iron, an endless lifting chain, and drum work-benches, and other effects.—May be viewed two days previous, and Catalogues had on the Premises, or will be sent post-free, to any parties who will apply to the Auctioneers, 40, Parliament-street, or Coal-exchange

EXTENSIVE BUILDER'S STOCK, Portpool-lane.—Alteration of the Day of Sale.

MESSRS. EVERSFIELD and HORNE respectfully intimate, that in consequence of the great number of lots they have to offer, it is necessary to POSTPONE this SALE from the 20th and 21th, to the 18th, 19th, and 20th.

40, Parliament street.

Valuable Leasehold Builder's Premises, Gray's-inn-lane.

MESSRS. EVERSFIELD and HORNE are instructed by the Executors to prepare for SALE, early in JULY, the valuable LEASE of the extensive BUILDER'S PREMISES, Portpool-lane, late occupied by the firm of Locke and Nesham, comprising large yard-room with covered sheds, timber stages, and saw-pit, carpenters' and joiners' shops for forty benches, plumbers', and painters' shops, store-rooms, &c.; also an excellent steam-engine and machinery for sawing, morticing, tenoning, &c. A large sum has been expended in substantial improvements and alterations, and they are held for a long term at a low rental.—40, Parliament-street.

FOR ABSOLUTE SALE SHOREDITCH Valuable and very improvable Freehold Property offering to Capitalists, Trustees, and others, secure and highly remunerative investments.

MR. EDWIN FOX is favoured with instructions to SELL by AUCTION, at the MART, on FRIDAY, JUNE 20th, at TWELVE, in lots, the valuable FREEHOLD ESTATE, Nos. 130, 132, and 134, Curtain-road, and 138, Shoreditch, being four commodious dwelling-houses and shops, and extensive premises, at present let to responsible tenants, but at inadequate rents, occupying a very important position, and from the extent of the area on which it stands, affording advantageous opportunities for building purposes, by which means a greatly improved rental may easily be obtained. The premises may be viewed, and particulars had of Messrs. Ware and Ware, Solicitors, 28, Kingsland-road; of Messrs. Devonshire and Wallinger, Solicitors, 8, Old Jewry; of Messrs. Desmoronds and Co. Solicitors, 5, Size-lane; of Mr. Wm. Roscoe, Solicitor, King-street, Finsbury; of Mr F. Broughton, Solicitor, 4, Falcon-square; at the Mart; and at Mr. Edwin Fox's Offices, 41, Coleman-street, Bank.

500,000 STOCK BRICKS, STARCH GREEN, near HAMMERSMITH.

MR. ALLEN DAVIS is directed by the Executor to SELL by AUCTION, on the PREMISES, Mr. Street's Brick-field, Starch Green, in lots, on THURSDAY, 19th JUNE, at ONE for TWO o'clock, about 500,000 Stock Bricks, well made, and lying handy for cartage; also two handsome cows, a sow in pig, and about 90 head of Spanish and Cochin poultry. May be viewed, and catalogues had on the Premises; at the Travellers' Rest, and Seven Stars, Starch Green; the Victoria, Uxbridge-road; King's Arms, Acton Bottom; Castle, Hammersmith; and of Mr Allen Davis, Auctioneer, 11, Old Jewry Chambers, City

WESTMINSTER-BRIDGE-ROAD.—TO BUILDERS, CONTRACTORS, AND OTHERS

MR. LEREW will SELL by AUCTION, on the PREMISES, Palace New-road, on MONDAY, JUNE 9th, at TWELVE, 700 yellow and pine planks, deals, and battens; 50 squares of flooring, 10,000 feet of moulding, 4,000 feet of wide pine board, 8,000 feet of quartering, 100 four-panel doors, large quantity of matched boarding, fir balk, dry cut stuff, and useful old materials; five brick and spring carts, chaise, brown mare, harness, ranges, stoves, old iron, &c.—Auction Offices, Cardington-street, Hampstead road.

NORTH WOOLWICH, ESSEX.—Freehold Building Land.

MR. LEREW will SELL by AUCTION, at GARRAWAY'S, on WEDNESDAY, JUNE 11th, at TWELVE for ONE, in two lots (by order of the Administrators of the late George Prickett, Esq.), TWO valuable PLOTS of FREEHOLD BUILDING LAND, overlooking the Pleasure grounds, and near the pier and terminus of the North Woolwich Railway.—May be viewed, and particulars had of J. E. Pool, Esq. Solicitor, 4, South square, Gray's-inn; and of the Auctioneers, 2, Cardington street, Hampstead-road.

42, UNION-STREET, SOMERS-TOWN.

MR. LEREW will SELL by AUCTION, on the PREMISES, as a whole, on THURSDAY, JUNE 12th, at TWELVE for ONE, about 2,000 feet of Mahogany, 1,500 yellow, white, and pine planks, deals, and battens, forty-pairs of prepared flooring, 8,000 feet wide pine boards, 6,000 feet scantling, dry cut stuff, doors, and other useful stock.—May be viewed the day prior to the Sale, when catalogues may be had on the Premises; and of the Auctioneer, Cardington-street, Hampstead-road.

SALES BY AUCTION.

GRANGE-ROAD, BERMONDSEY.—Genuine Salvage Sale, without the slightest reserve. To Builders, Cabinetmakers, Wheelwrights, Firewood Cutters, and Others. The Stock of Messrs. Elwin and Townsman, Timber Merchants, damaged by fire.

MR. PEAKE is ordered by the Proprietors to SELL by AUCTION, on the PREMISES, on THURSDAY, JUNE 19, 1856, at TWELVE for ONE o'clock, in lots, all the STOCK DAMAGED by the late disastrous FIRE, comprising about 250 fine oak and pine planks, 200 yellow deals, 600 squares pre-ared flooring, in different thicknesses, large quantity of scantling, ash felloes, mahogany, and a great variety of other useful materials.—May be viewed the morning of Sale; and catalogues obtained on the Premises, and at Mr. Peake's Offices, 44, Tooley-street, Southwark

SALE POSTPONED from JUNE 3rd and 4th to JUNE 5th and 6th

MEMORIAL CHURCH at CONSTANTINOPLE.—TO ARCHITECTS.—The Committee entrusted with the duty of giving effect to the Resolutions of the Public Meeting, held April 30, 1856, under the Presidency of H.R.H. the Duke of Cambridge, are encouraged by the success which has attended their appeal for funds, to invite Architects to send in DESIGNS for the MEMORIAL CHURCH, which it was then determined to erect at Constantinople.

The Committee feel that they are not acting prematurely in so doing, a months must still elapse before the site can be definitively approved, and a still longer interval before the work can be actively commenced. They are therefore satisfied that they best respond to the encouragement they have already received, and offer the best guarantee for their zeal in carrying out the work, by taking immediate measures to push forward the architectural arrangements.

The competition will be unlimited and anonymous.

The style to be adopted in the designs must be a modification to suit the climate, of the recognised Ecclesiastical Architecture of Western Europe, known as "Pointed" or "Gothic;" and the neglect on the part of any architect of this provision will absolutely exclude from competition.

The numerous and beautiful instances existing in Southern Europe of this modification of Pointed architecture amply justify the preference thus given to it. Any reproduction of the peculiar features of Byzantine architecture is prohibited, as being objectionable in many respects. Still more must the competitors abstain from the imitation of any forms connected with the religious architecture of the Mahometans, which is, indeed, at Constantinople based upon Byzantine models.

The church must be of sufficient capacity to hold without galleries a congregation of not fewer than 700 persons, while the cost must not exceed 20,000*l.*—a sum sufficient in the hands of an able architect to ensure the monumental character of the structure. The main expenditure must be devoted to enhancing the solid dignity of the building itself, the fittings being as simple and inexpensive as may be consistent with propriety. The substitution or addition of more expensive fittings is left to the munificence of individuals, who may desire to present them as special memorials. No representations of the human form, or of the forms of animal life, are to be introduced, either externally or internally; at the same time architects are advised to avail themselves of the beautiful constructive materials which are so easily and cheaply procurable at Constantinople, particularly the local Marmora marble.

The competitors' attention is directed to the risk of earthquakes occurring at Constantinople.

The competitors must send in, on the scale of ——, the following geometrical drawings:—

1. Ground-plan. 2. Elevation, west end. 3. Ditto, east end. 4. Ditto, north side. 5. Ditto, south side. 6. Longitudinal Section. 7. Latitudinal section, looking west. 8. Ditto, looking east.

They must also contribute detail drawings, upon, if necessary, a larger scale, of such constructional arrangements, ornamental details, and internal fittings, as they consider it requisite to elucidate, with concise explanations in a manuscript which must give the grounds upon which they base their estimate of the whole probable cost. They are also at liberty to send one perspective drawing of the exterior, and another of the interior, but not more. A convenient vestry must be shown adjoining the church, and provision made for the organ.

Non-compliance with the above regulations will absolutely exclude from the competition.

In order to ensure competence and impartiality in the adjudication, the Committee have entrusted the selection of the successful designs to the following gentlemen, who have kindly expressed their willingness to serve in a capacity of judges:—

THE RIGHT REV. THE LORD BISHOP OF RIPON.
SIR CHARLES ANDERSON, BART.
THE VERY REV. THE DEAN OF ELY.
THE REV. PROFESSOR WILLIS.
A. J. B. BERESFORD HOPE, ESQ.

The designs must be sent in to the Honorary Secretaries of the Memorial Church, No. 79, Pall mall, London, under motto, with the author's names and addresses in sealed envelopes, not later than JANUARY 1st, 1857, endorsed "Memorial Church at Constantinople."

The judges will be entitled to award a first prize of 100*l.* and a second and third prize of 70*l.* and 50*l.* or in case of equality, two second prizes of 60*l.* each. The design to which the first prize is adjudicated will, without some special reason to the contrary, be the one carried out, and the amount of the prize will be ultimately deducted from the architect's commission. The judges may also make honourable mention of any other designs which appear to them entitled to the distinction.

After the adjudication, there will be a public exhibition in London of all the designs, with the names of the respective architects.

** Copies of this notification to architects may be obtained at the Office of the Society for the Propagation of the Gospel, No. 79, Pall-mall, London.

EDMUND LYONS, Admiral, G.C.B.
F. E. CHAPMAN, Colonel, C.B. R.E. } Hon.
G. R. CLEIG, M.A., Chaplain-General, } Secs.
ERNEST HAWKINS, B.D., Secretary S.P.G.

79, Pall-mall, June 4, 1856.

JAS. FAHEY, Secretary.

CONTRACTS.

GUILDFORD UNION.—To BUILDERS and CONTRACTORS.—Extensive additions and alterations to the Guildford Union Workhouse.—The Guardians of the Guildford Union, in the County of Surrey, hereby give notice that they are desirous of receiving TENDERS for BUILDING NEW SCHOOLS and DORMITORIES, a NEW HOSPITAL and other ADDITIONS and ALTERATIONS to the Workhouse of the said Union according to the plans and specifications prepared by Mr. C. H. HOWELL, architect, of Godalming, Surrey, and of the Norwich Union Insurance Office, New Bridge-street, London. The plans and specifications may be seen at the Workhouse, Guildford, after SATURDAY, the 31st day of MAY instant. The Contractor whose Tender may be accepted will be required to give security for the due performance of the Contract. The Guardians do not pledge themselves to accept the lowest or any of the Tenders. Tenders, indorsed "Building Tenders," must be sent to me by SEVEN o'clock in the evening of WEDNESDAY, the 25th JUNE next.—By order of the Board,
W. HAYDON SMALLPEICE, Clerk.

Guildford, 27th May, 1856.

TO BUILDERS and OTHERS.—The Guardians of the Poor of the Edmonton Union will meet at the Board-room at Edmonton, on WEDNESDAY the 25th of JUNE inst. at 11 o'clock, to receive TENDERS for the ERECTION and COMPLETION of an INFIRMARY adjoining the Children's Establishment at Chase-side, Enfield, Middlesex. The plans and specifications may be seen at the Office of the CLERK of the UNION, in Silver-street, Enfield; and all further information obtained at the Offices of Mr. F. R. SANDELL, Architect, 27, Cannon-street, City. Sealed Tenders must be sent to me before the 25th JUNE instant. The Guardians do not bind themselves to accept the lowest Tender.—By order of the Board,
Enfield, June 5th, 1856. JOHN SAWYER, Clerk.
Surety will be required for the performance of the Contract.

NEWNHAM, GLOUCESTERSHIRE.—TO GAS ENGINEERS and OTHERS.—Persons willing to CONTRACT for the ERECTION of GAS WORKS at Newnham aforesaid, with all necessary Mains and appliances for the purpose of lighting the said Town, are requested to send in PENDERS, with Plans, Specifications (free of expense), and all other necessary particulars explanatory of the system proposed to be adopted, to Mr. F. CARTER, Solicitor, Newnham, on or before the 19th day of JUNE inst. The promoters of the above works do not bind themselves to accept the lowest or any other Tender. Information with reference to the subject will be given by Mr. F. CARTER.
Newnham, 28th May, 1856.

BOROUGH of SUNDERLAND.—SEWERAGE WORKS.—CONTRACT No. 1.—To BRICK MANUFACTURERS and OTHERS. The Corporation of Sunderland are desirous of receiving TENDERS for machinery for manufacturing and delivering in a depôt within the borough of Sunderland, 3,000,000 BRICKS necessary for the construction of the brick sewers, cesspits, side entrances, &c. in connection with the said works. The quantity of bricks required will be about two and a quarter millions, including square bricks, and bricks to different radiuses for upwards of eight miles of sewers. Further particulars may be known on application to WILLIAM CROZIER, C.E. Borough Engineer, at his offices, Post Cross-street, Sunderland, to whom Tenders are to be sent on or before the 5th day of JULY, 1856, endorsed, "Tender for Bricks." The Corporation do not bind themselves to accept the lowest or any Tender. By order,
WILLIAM SNOWBALL, Town clerk.

BOROUGH of SUNDERLAND.—SEWERAGE WORKS.—CONTRACT No. 2.—To STONEWARE PIPE MANUFACTURERS and OTHERS.—The Corporation of the Borough of Sunderland are desirous of receiving TENDERS for the manufacturing and delivering in a depôt within the borough of Sunderland, the STONEWARE PIPES, Bends, Junctions, Invert Blocks, Curdon Blocks, &c. necessary for carrying out the Sewerage Works of the borough. The works comprise the necessary pipes, bends, junctions, &c. for about 4 miles of pipe sewers from 9 to 18 inches in diameter, irrespective of private works; the necessary junction and invert blocks for eight miles of such sewers, and the articles in stoneware which may be required in carrying out the said works. Further particulars may be known on application to WILLIAM CROZIER, C.E. Borough Engineer, at his offices, Post Cross-street, Sunderland, to whom Tenders are to be sent on or before the 5th day of JULY, 1856, endorsed "Tender for Stoneware Pipes." The Corporation do not bind themselves to accept the lowest or any Tender.
By order, WILLIAM SNOWBALL, Town Clerk.

TO SEWER CONTRACTORS and OTHERS.—The Sewer Committee of the Vestry of Saint Mary, Newington, will meet at the Vestry-room of the Parish Church, on FRIDAY, the 27th inst. at SEVEN o'clock in the evening, to receive TENDERS for the EXECUTION of DRAINING and MEASURED WORKS in connection with the DRAINS and SEWERS in the said Parish. Printed schedules and forms of Tender can be obtained at the Office of Mr. HENRY JARVIS, the Surveyor of Sewers, on Trinity square, Newington, on payment of Ten Shillings, which, money will be returned to the parties tendering when the Tenders are opened. No other Form of Tender will be received. Sureties will be required for the due performance of the contract, and the committee do not bind themselves to accept the lowest or any other tender.
H. and I. CHURCH, Joint Clerks to the Vestry,
1, Charlotte-st., Newington Butts.
6th June, 1856.

CONTRACTS.

CONTRACT C.—For the Paving, Flagging, Kerbing, Channelling, Forming Footways, Repairing Roads, Forming Carriage-crossings, and Repairing Footways in the several Streets, Roads, Courts, Alleys, and Places within the Parishes of St. James, Westminster, and St. George, Hanover-square.

CONTRACT D.—For the Paving, Flagging, Kerbing, Channelling, Forming Footways, Repairing Roads, Forming Carriage-crossings, and Repairing Footways in the several Streets, Roads, Courts, Alleys, and Places within the Parishes of St. Martin-in-the-Fields, St. Paul, Covent-garden, and St. Giles-in-the-Fields.

CONTRACT E.—For the Paving, Flagging, Kerbing, Channelling, Forming Footways, Repairing Roads, Forming Carriage-crossings, and Repairing Footways in the several Streets, Roads, Courts, Alleys, and Places within the Parishes of St. George, Hanover-square, and St. Peter, Westminster.

Plans, specifications, and forms of Tender may be seen, and all information obtained, at the Office of the Board, No. 1, Great George-street, Westminster, on and after TUESDAY, the 17th day of JUNE instant, between the hours of TEN and SIX. Parties tendering will be required to state in their Tenders the rate per cent. above or below the printed schedule of prices (or at the same) at which they will be willing to execute the several works. Sealed Tenders to be delivered under the parishes of the Paving and Works, Repairs to Sewers &c.," at the Offices of the said Board in Millbank-row aforesaid, by or before FOUR o'clock in the afternoon on MONDAY, the 23rd day of JUNE instant, at which time and place parties tendering, or some authorised agent for each of such parties, will be required to attend. No Tender will be received after the time specified, and that does not contain the names and description of two sufficient sureties, to be approved by the Board, for the due performance of the contract, or will be made out on any other than the printed forms, nor will such be considered unless with the conditions. The Committee do not bind themselves that the lowest or any Tender will be accepted by the Board.

By order of the Board,

W. F. JEBB, Clerk.

Millbank-row, Westminster, 12th June, 1856.

CONTRACTS.

TO CONTRACTORS for PUBLIC WORKS.—The Local Board of Health of Hastings give notice that they are prepared to receive TENDERS from competent persons for the DRAINAGE of part of their district. The Contract will comprise the CONSTRUCTION and LAYING of about 8800 lineal yards of BRICK SEWERS, from 1 foot 6 inches to 4 feet; 2,147 yards of BRICK SEWERS, from 1 foot 6 inches to 4 feet; and about 1,500 yards of GLAZED STONEWARE PIPES of sizes from 9 inches to 15 inches. Also the necessary Gullies, Ventilating Shafts, Side Entrances, and Tree Pipes. The specification and conditions of Contract and Tender with printed Form of Tender, may be obtained, upon payment of five shillings, and the plans, sections, and drawings, may be inspected at the Office of the Town Clerk, High-street, Hastings, between the hours of TEN and FOUR, on and after the 16th instant. The Local Board will require the works to be completed in not less than six months from their contract being entered into; and they do not bind themselves to accept the lowest or any Tender. Sureties will be required. Sealed Tenders, endorsed "Tenders for Drainage Works," and addressed to "The Hastings Local Board of Health," must be delivered at the Town Clerk's Office, Hastings, before TWELVE o'clock at noon on FRIDAY, the 25th day of JULY next.—By order of the Local Board

JOHN G. SHORTER, Town Clerk.

Hastings, June 9, 1856.

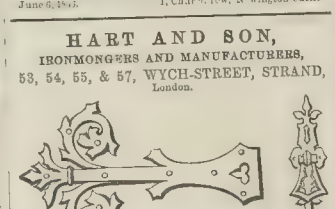
TO BUILDERS.—WANTED, TENDERS for BUILDING OFFICES, STORES, &c. at the Manor-house Works, Long Eaton. Plans, conditions and specifications to be seen at the Office of Messrs. BIDLAKE and LOVATT, Architects, Wolverhampton. Tenders to be delivered in new and sealed for the whole of the Works complete, addressed, "S. J. Cleve, Long Eaton, near Derby," on MONDAY, 23rd inst. The lowest tender will not necessarily be accepted. Printed Quantities will be furnished.

TO CONTRACTORS, GARDENERS, and OTHERS.—The Burial Board for the Parishes of Chesterfield, Tapton, and Calow, are also prepared to receive TENDERS for LEVELLING, LAYING OUT, PLANTING, and MAKING PATHWAYS through the Cemetery Grounds, and all information obtained, at the Offices of Messrs. BIDLAKE and LOVATT, Architects, Wolverhampton, between the hours of TEN a.m. and FOUR p.m. from SATURDAY, the 14th inst. to JULY 1st. All Estimates and Tenders are to be sent in addressed to the Clerk to the Board, sealed up, and endorsed "Tenders for Levelling, &c. Cemetery Grounds, Chesterfield," on or before the 21st day of JULY next, at TWELVE o'clock at noon. The Board do not bind themselves to accept the lowest or any Tender.—By order,

ROBERT WALLER, Clerk to the Board.

Chesterfield, 11th June, 1856.

TO SEWER CONTRACTORS and OTHERS.—The Sewer Committee of the Vestry of Saint Mary, Newington, will meet at the Vestry Room of the Parish Church on FRIDAY, the 27th inst. at SEVEN o'clock in the evening, to receive TENDERS for CLEANSING and CASTING OUT the MUD from the OPEN DITCH and other Works connected therewith, in the Trinity district of the parish. The conditions of contract and the quantities may be seen, at the office of the undersigned, on and after the 20th inst. The Committee do not bind themselves to accept the lowest or any Tender. Sureties will be required for the due performance of the Contract, and the Committee do not bind themselves to accept the lowest or any other Tender.



H. and F. CHESTER, Jun. Clerks to the Vestry, 1, Church-row, Newington-butts.

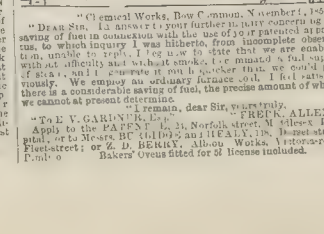
June 6, 1856.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND, London.

HINGES, LOCKS, HANDLES, BOLTS, &c.



First-class Prize Medal, Paris Exhibition, 1855.

Specimens at the Hardware Court, Crystal Palace, Sydenham. Illustrated Price-catalogues post-free on application

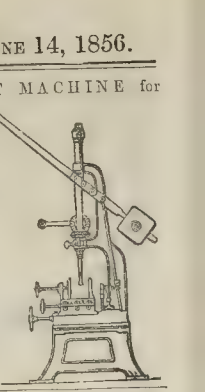
COUNT the COST.—All kinds of CONSTRUCTIVE WORK in iron, stone, brick, and timber, planned, specified, and estimated, at moderate charges, by a practical man.—Address, M. M. Office of "The Builder."

LESS FUEL, MORE STEAM, NO SMOKE

GARDNER'S PATENT SMOKE CONSUMER is SELFACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 1, 1855.

"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled with all facility and without smoke, to consume the whole supply of gas, and generate from thicker coals than we could previously. We employ an ordinary furnace coal, but I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.

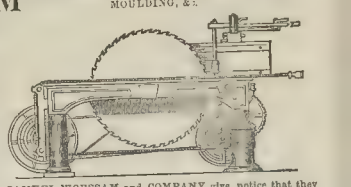


"I remain, dear Sir, yours truly,

"THEO. V. GARDNER, Esq." "FREDK. ALLEN

Apply to the PATENT, No. 34, Norfolk-street, Middlesex Hospital, or to Messrs. BOWDLER and HEALY, 108, Bunhill-row, Finsbury-circus; or Messrs. BOWDLER and HEALY, 108, Bunhill-row, Fleet-street; or Z. D. BERRY, Albion Works, Victoria-road, Pimlico.

Bakers' Ovens fitted for 50 license included.

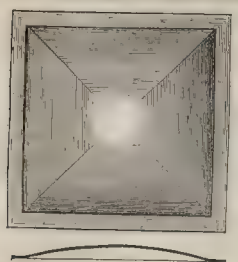


NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT Wood, and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', Messrs. POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

MACHINERY for SAWING, PLANING, MOULDING, &c.



SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kingsland Chapel, and added to their very extensive and first-class Steam Machinery and Tools for working all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

WOOD-CUTTING MACHINERY, JOHN McDOWALL and SONS, WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow, MANUFACTURERS of VERTICAL SAW-FRAMES

For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.

Patent vertical saw-frames, of the foregoing dimensions, with steam-power attached; circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from 3 feet 6 of an inch thick to 6-inch deck plank; revolving panners, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent circular saw machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power mortising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-and-double; veneer mills of all sizes, with all appendages; scale-and-double; veneer cutters, for hat-boxes, &c.; patent sheet feed motions for board machines, for hat-boxes, &c.; patent sheet feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all composed of the best of metal, and by first-class workmen, for hat-boxes, &c.; patent sheet feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all composed of the best of metal, and by first-class workmen, for hat-boxes, &c.; patent sheet feed motions for board machines

Plan and Section of Buckled Plate; Convex Side.

MALLET'S PATENT BUCKLED PLATES.

TUPPER AND CARR,

SOLE LICENSEES AND MANUFACTURERS.

THESE Plates are applicable to every purpose where strong, rigid, light, and durable load sustaining surfaces are demanded, as for the Flooring of Bridges, Viaducts, Jetties, Fireproof Fronts for Buildings, Fireproof Partitions, Bulkheads, Doors and Shutters, the Plates in between Iron Piling for Wharf or Dock Walls, the Covering of Iron, or other Roofings, as for Building Slips in Docks, &c., for Railway Stations, &c. The construction of Iron, Military, Naval, or other Huts, Stores, and Iron Buildings of all sorts; the Formation of Water Tanks, the Covering of Reservoirs of Waterworks; and, generally, to every purpose to which Corrugated Iron has been applied, beside many others to which that is inapplicable,—as, for example, the Construction of Balcony or Cantilevered Galleries, Projecting Footways, &c. the Plates deriving their support solely from themselves and the walls

BUCKLED PLATES may be united to each other, or to the frame of the structure they cover, by either lap or butt joints and either by screw bolts, rivets, or wood screws (to timber), and the joints are made absolutely water tight when required, by rivetting and lines and caps, or by interposed strips of felt saturated in oil or cement, or in tar and pitch, or by strips of vulcanised India-rubber, or by a thin layer of oil putty.

The sizes of the Patent Buckled Plates are—4 ft. by 4 ft.; 3 ft. by 3 ft.; 4 ft. by 2 ft.; and 3 ft. by 1 ft. 6in.

Other sizes by agreement.

For further particulars, prices, &c. apply to the Licensees,—

TUPPER AND CARR,

3, MANSION-HOUSE-PLACE, LONDON, AND 6, BERKLEY-STREET, BIRMINGHAM.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,

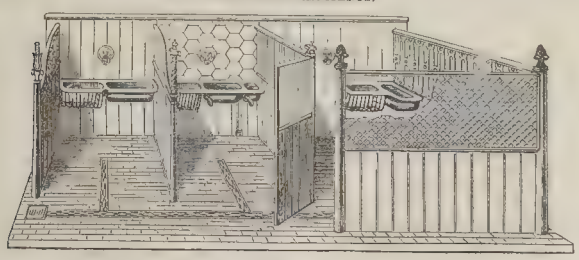
FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES

beyond the current Price of Hoop-iron

Gauge.	In wide.	Per 1,000 ft.
No. 16	.. 1½ ..	72s. 0d.
15	.. 1½ ..	76. 6d.
15	.. 1⅝ ..	88. 0d.
15	.. 2 ..	86. 0d.
15	.. 2½ ..	98. 6d.



THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent, that a direct end grain of the iron is presented longitudinally, and which become, when built into the brickwork, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the ball of which is taken to the back of the manger, and works with ease and freedom up and down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an improvement in the above fittings, being complete in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings.

Cheap and Durable Corn Bins.

Improved Surface Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron mates, Pergolas, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

AUSTIN'S IMPERIAL.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system which give superior tone and facility for ringing.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c. The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers of every description, may be supplied with any quantity by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

TO CARPENTERS and OTHERS.—Several EIGHT-ROOMED CARCASES TO BE SOLD, or LET, on a ground rent, in the Malden-road, Haverstock-hill. Money advanced to assist in finishing.—Apply to Mr. CHARLES MARSHALL, Malden-road; or Mr. CHARLES PATRICK, Solicitor, 89, Chancery-lane.

THE LONDON and COUNTY UNITY BENEFIT BUILDING SOCIETY ON THE PERMANENT PRINCIPLE.
Subscriptions, 5s. 6s. 6d. or 10s. Monthly.
1,000£. will be provided to be advanced at the first Subscription Meeting, to be held the first WEDNESDAY of JULY.
A Public Meeting, for the purpose of explaining the principles and enrolling Members, will be held at the George and Blue Boar Tavern, High Holborn, on FRIDAY, 20th JUNE, at EIGHT o'clock, P.M. Dr. EPPS in the Chair.
Applications for Shares may be obtained as follows:—
F. R. Smith, Solicitor, 70, King William-street, City.
Mr. Farmer, Mount-street, Lambeth.
Mr. Bourne, 484, Oxford-street.
Mr. Forrest, 1, Patriot-row, Cambridge-road, Bethnal-green.
And of the Secretary,
Mr. JAMES GROVER, 3, Leader-street, Chelsea.

TO QUARRY PROPRIETORS, STONE and SLATE MERCHANTS, and OTHERS requiring WATERSIDE PREMISES.—TO BE LET on LEASE, a WHARF, with good depth of water; also a Dwelling and Counting-house, situate on the south side of the River, below Bridge.—Apply by letter, with real name and address, to A. Z. at Mr. Syrett's, Stationer, 47, Old Broad-street, City.

TO BUILDERS AND OTHERS.
TO BE LET on BUILDING LEASES, at very moderate ground rents, for a term of ninety-nine years, in the immediate vicinity of the Crystal Palace, and commanding most extensive views over Kent and Surrey, several eligible PLOTS of FREEHOLD LAND, peculiarly adapted for the erection of detached or semi-detached villa residences. The land is immediately adjoining the Crystal Palace Railway Station, and only a few minutes' walk from the Anerley Station, on the Croydon and Epsom line; the West End and Crystal Palace Railway, now in active progress, will bring it within easy access of the West-end of London, and thus give it advantages which few localities possess. Houses in the neighbourhood are in great demand, and let immediately at very remunerative rentals. Good roads and sewers are made, and a supply of water to be obtained from the Lambeth Water Company. Leases granted direct from the freeholder. For particulars and to see plans, apply at the Offices of Messrs. WEBSTER and ASHDOWN, Architects, 42, Charing-cross.

THE CONSERVATIVE LAND SOCIETY.
The magnificent MANSION on the banks of the Thames, known as St. Margaret's, opposite Richmond and Kew Gardens, with seventeen acres of LAND, is now for SALE. Cards, to view the Estate, may be had of the Secretary, No. 33, Norfolk-street, Strand. Eligible Plots on the Tunbridge Wells Estate (Woodbury-park), giving Votes for West Kent, are now on Sale.
The Fifteenth Quarterly General Meeting will be held at EXETER HALL, on THURSDAY, the 26th of JUNE, at THREE o'clock, VISCOUNT ENFIELD, M.P. in the chair, when the thirty-fifth public drawing for rights of choice on the Society's Estates, will take place.
CHARLES LEWIS GRUNEISEN, Secretary.

NEW WINDSOR ESTATE.—Valuable BUILDING LAND. TO BE LET in Plots for the erection of first and second class Villa Residences, with Stabling, which are much needed in this beautiful and healthy locality. The situation is undeniably the finest in or near Windsor, abutting on the Park and Forest Walk, and commanding a splendid view of the Castle. Within ten minutes of the Great Western and fifteen minutes' walk of the South Western Railway Stations. Advances can be had to responsible parties.—For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 9, Danes Inn, Strand.

RELIEVO LEATHER CEILING ORNAMENTS.—The New Relievo Leather Ceiling Ornaments for drawing and dining rooms, for gas or crystal chandeliers, have been introduced, in gold, white, or oak, in designs, which no other material, such as paper-hanging, composition, or plaster can approach; warranted not to split, break, or chip, and to last for ever, at one-third the usual cost. Approved by the first architects in London.—Sole Manufacturer and Inventor, J. LAWRENCE, 34, Charlotte-street, Fitzroy-square. Established 1840. A rosette, 5 inches diameter, 4s. 6d.

TO TIMBER MERCHANTS, RAILWAY FENCERS, &c.
ANY one desirous of PUTTING UP about TWELVE MILES of FENCING or of supplying the posts and rails for the same, to be delivered by railway or canal, will be treated with.—For particulars, address G. B., Manchester-shades, Old Fish-street-hill, London.

CARTS, VANS, WAGGONS, LADDERS, BARROWS, &c.—Price Lists for the undermentioned may be had on application to—
No. 1. Carts, Vans, Waggons, Drays, and Trucks.
No. 2. Wheels and Repairs.
No. 3. Ladders, Barrows, &c.
No. 4. Hire of ditto.
G. ELL, 3, Tottenham-court-road, and 2, Palace-row, New-road, St. Pancras, near the Hampstead-road

---

CLAY.—The BRANKSEA CLAY COMPANY, near Poole, Dorset.—Stone and other Potters are informed, that they can be supplied by the above Company with all descriptions of clay of the finest quality, and in any quantities, at very low prices. Brewers, Gas Companies, Furnace Builders, and others, supplied with peculiar fine fire clay; the same may be had ground, if required.—Orders addressed to Mr. T. C. BECK, at New Wharf, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTS, at the Works, Branksea Island, Poole, Dorset, will meet with prompt attention.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns, commencing at 4s per foot super., together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 30, New Bond-street.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the

admission of pure air through an EXTERNAL WALL

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 127, Union-street, Borough; and of all respectable ironmongers, builders, &c.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids, and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gas-holders, sand pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter.—FROM SIR RAYMOND JARVIS, Bart., YENTN'OR, ISLE OF WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 40 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

¼	⅜	½	¾	1	1¼	1½	2	2½	3 in.
9d.	11d.	1s. 1d.	1s. 3d.	1s. 5d.	1s. 7d.	1s. 9d.	2s.	2s. 3d.	2s. 6d. 2s. 9d.

Super-extra stout quality.

2	2½	3	3½	4 inches.
2s.	2s. 3d.	2s. 6d.	2s. 9d.	3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

¼	½	¾	1	1½	2	2½ inches.
6d.	10d.	11d.	1s.	1s. 3d.	1s. 6d.	per yard.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

WINDOW BLINDS.—Best Wire Blinds, 1s. 6d. per foot; Holland ditto 4d.; and every other kind of Inside or Outside Blind, Spring Rollers, &c. of best possible quality at proportionate prices. No extra charge for fixing in Town or Country. HENRY JINKS, late with R. JINKS and Co. Blind-makers to the Queen, Frames-bank Blind-factory, 4, Caledonia-street, near the Pimlico Steam-boat Pier.

WINDOW-BLINDS.—J. FULLER, Manufacturer, 29, Charlotte-street, Blackfriars-road. Established 1850.—Venetian Blinds, from 10s. each, or 8d. per foot; Wire ditto, 7s. each, or 9d. per foot; Holland ditto, from 5s. each, or 5d. per foot. Every other description of Blinds equally low, warranted of the best manufacture. Discount to Builders and the Trade. Fixed complete.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 6d.; 9d.; gauze wire blinds, in mahogany frames, &c.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

TO ARCHITECTS, BUILDERS, &c.

CASENTINI and CO. FIGURE and ARCHITECTURAL MODELLERS and CARVERS, beg to draw attention to the extensive STOCK of ORNAMENT, &c. in the Italian, Louis Quatorze, Gothic, and other styles, adapted to the decoration of churches, mansions, villas, &c. Estimates given for new, or the restoration of old work, in town or country. Show-rooms and Workshops, 24, Hercules-buildings, Westminster-road, Lambeth.

BUILDERS, CONTRACTORS, and OTHERS having any quantity of PAPER HANGING or PAINTING to be done would find it advantageous to them, by applying to J. BALDWIN and SON, House decorators, 62, St. John-street, Clerkenwell, as they would have no objection to take house property in payment for the same.

PAPER-HANGINGS.—To BUILDERS, PAINTERS, and the TRADE generally.—TRUMBLE and CO. Manufacturers, Leeds, beg to call the attention of the trade to their immense STOCK of PAPER-HANGINGS, at No. 4, Oxford-street, London, consisting of Gold, Flock, Satins, Oaks, Marbles, Grecians, and Machine Goods. The whole being their own manufacture, can supply on the very best terms.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 22 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFERY, ALLEN, and CO. beg to inform the trade, they have a large selection of Paper-Hangings of their own manufacture, of all qualities, and at very low prices. They confidently invite attention to better-best papers, which in price, style, and colouring, are equal to any that can be manufactured.—J. A. and CO. are the sole proprietors of the Gutta Percha Paper, an efficient remedy for damp walls.—Factory, 115, Whitechapel; Show-room, 500, Oxford-street.

Just published in fcp 8vo price 5s cloth,

LIFE in the TRENCHES before SEBASTOPOL.

By MAJOR WHITWORTH PORTER, Royal Engineers.

"It is pleasant to turn from the baron's grim narrative to Major Porter's gay little volume. Here we find letters and journals, but some passages of experience both grave and gay told. The Major was chief of the Engineers' department, had guns and commanded a battery throughout the siege. His view of the great military operation in which he bore so honourable a part is the work of his own mind and the science, but within this limit it is clear. There are many interesting anecdotes, and very graphic passages, we are tempted to extract. This is a sweet little book, and we feel that the brave engineer officer, in exhibiting himself with his brother officers who make out with him the holidays of peril, has done Major Porter's cause upon the best possible service, with great sprightliness and good feeling."—*Spectator*.

Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Theodolites always for Sale.

QUEEN'S COLLEGE, BIRMINGHAM.

Incorporated by Royal Charter.

ENGINEERING DEPARTMENT.

The object of this department is to provide a thoroughly scientific and practical education for students in the professions of Engineering, Architecture, and Mining, or for any that may enter in life where a sound knowledge of mathematical science, and a practical acquaintance with chemical and mechanical principles, are needed. &c.

The Course of Lectures is as follows:

I. Mathematics and Natural Philosophy. Rev. Prof. Gibson, B.A., Scholar Trin. Coll. Cambridge.

II. Chemistry. Prof. FOX.

III. Engineering and Mechanical Philosophy. Prof. W. MATHIESON, C.E. Member of the Institution of Mechanical Engineers.

IV. Practical Instruction. Prospectuses and fee-lists, with further particulars, may be had of Dr. HILL, Secretary.

Students may reside either as Boarders or Non-residents. Those who have attended the entire course of instruction are entitled to the degree of B.E. awarded by the Queen's College to the other successful students at the annual examinations.

Applications regarding further details may be made to Rev. E. S. JOHN LAURY, Warden, or the undersigned, or to WILLIAM SANDS COX, F.R.S. Dean of the Faculty, or to the several Professors.

CRYSTAL PALACE.—The GREAT FOUNTAINS. The Directors of the Crystal Palace Company best to announce that WEDNESDAY, the 18th of JUNE, has been fixed for the FIRST PLAYING of the GREAT FOUNTAINS on that day will take place the first public display of the water-works, comprising in addition to the Fountains already in action, the Water Temples, the Cascades with two large Water-falls, and the Fountains of the Grand Lawn Basins. On this occasion admission will be limited to Shilling (Private) and Two Guinea (pink) and Two Guinea (Private) Season Tickets, and to private parties. Half a Guinea Transferable tickets issued will not be available on this day. See the dates specified on the face of these tickets. Trains for the Palace and Park will be put on this day. See the dates specified on the face of these tickets. Trains for the Palace and Park will be put on this day.

Life Assurances are granted under an extensive variety of forms and at Moderate Premiums. Policies effected by the Younger Ages being lower than those of many of the older and most respectable offices.

Participation of Profits. Four fifths, or Eighty per cent. of the declared Profits will be divided quinquennially among those entitled to participation.

Non-participating Scales of Premium. Policies issued at minimum Rates, with no participation in Profits.

Life Policies are not liable to be forfeited by the Lives Assured proceeding to the prescribed limits without the cognizance of the holders of such Policies.

Reduced Extra Rates for residence out of Europe.

No charge for Stamps or Medical Fees.

Fire Assurances, both at home and abroad, are accepted at very Moderate Premiums.

The Assured participate in the Fire Profits in respect of Policies in force for five complete years at each period of Division.

Losses by Lightning are made good; and the Company are liable for Losses by explosion of Gas, when occasioned by Gunpowder, or in cases specially provided for in the Policy.

Detailed Prospectuses will be furnished on application.

FRANCIS AUGUSTUS ENGELBACH, Actuary and Secretary.

The Receipts for the Renewal Premiums due at Midsummer are ready for delivery at the Office in Town, and at the Agencies throughout the country.

ANCHOR ASSURANCE COMPANY, for LIFE, FIRE, ANNUITIES, and ENDOWMENTS

Capital—One MILLION. Established 1842.

Chief Offices, 1, Threadneedle-street, London.

Chairman—WILLIAM LEE, Esq. M.P.

Every description of Life and Fire Assurance, Annuity and Endowment Business, transacted at the most moderate rates of premium. Fire Risks survey'd, and all papers given without charge.

THOMAS CAVE, Managing Director.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

The Annual Meeting of the Society was held in Edinburgh on the 3d MAY last, when it was shown by the Directors' statement that the number of policies issued during the year ending 1st May, 1856, was 1,000, and the sum assured thereby being 293,293*l*; and the annual premiums thereon, 9,320*l*.

The result of the investigation for the triennial division of profits was then announced, by which the policies assumed in the assurances and the sum of which will be liable to the holders, but of which one-third, or 71 more, by the laws of the society, to be set aside as a reserve for allocation at the next triennial division in 1859.

From the remaining two-thirds a Bonus was declared to the rate of 1*l* per cent per annum, on all policies on which six premiums had been paid, but only on the sums in the policies but also on the former vested bonuses.

There was left, in addition to the sum of reserve above stated, a surplus of 13,625*l*, together, 74,802*l* to go to the next division

The Invested Funds of the Society amount to £279,971

The Annual Revenue 46,611

The Existing Assurances to 4,764,363

Copies of the report may be obtained at the Society's Head Office, 99, St. Andrew-street, Edinburgh; at the London Office, 126, Bishopsgate-street Within; and at any of the Agencies.

ROBERT CHRISTIE, Manager.
ARCHIBALD T. RITCHIE, London Agent.

ROYAL POLYTECHNIC.—Patron, H.R.H. PRINCE ALBERT.—Next Monday evening, June 16th, at Eight, Henry Mayhew, Esq., author of the "Great World of London," &c., will open the Eighth Course of Monday Evening Lectures by the Professor of Music on the Curiosities of Life among the Labourers and Poor of London. In September next Mr. Pepper will open Classes for Working Men and Youths, and the Professor of Music will commence his series of Concerts. Teachers will be paid. Free, and gentlemen desirous of conducting one or more classes may communicate by letter to Mr. Buckmaster, Trades' School, Wandsworth, or for Mr. Pepper. All the Dissolving Views and Lectures as usual. Admission to the whole, 1s.; children and schools half-price.

REAL and PERSONAL ADVANCE COMPANY, Incorporated by Act of Parliament. This Company ADVANCES LOANS upon the security of freehold, leasehold, and other property, in sums or periods to be repaid by instalments. Personal security accepted in addition where an advance to the full value of the property is required. Sold by all the principal Stationers in town or country.

LIFE in the TRENCHES before SEBASTOPOL.

By MAJOR WHITWORTH PORTER, Royal Engineers.

"It is pleasant to turn from the baron's grim narrative to Major Porter's gay little volume. Here we find letters and journals, but some passages of experience both grave and gay told. The Major was chief of the Engineers' department, had guns and commanded a battery throughout the siege. His view of the great military operation in which he bore so honourable a part is the work of his own mind and the science, but within this limit it is clear. There are many interesting anecdotes, and very graphic passages, we are tempted to extract. This is a sweet little book, and we feel that the brave engineer officer, in exhibiting himself with his brother officers who make out with him the holidays of peril, has done Major Porter's cause upon the best possible service, with great sprightliness and good feeling."—*Spectator*.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 18mo with Illustrations in the Parts, price One Shilling each, or in Two Volumes, price 2s 6d each,

VOL. XIV.—No. 697.

NEXT week (Tuesday, the 17th), a meeting of several architectural societies will be held at St. Alban's, when Mr. Scott will give a walking commentary on the Abbey, and its proposed restorations; and Mr. Poole, of the Northampton Society, will deliver a lecture on architectural colouring. It is hoped that the gathering together of many persons interested in our ancient architectural glories will give a stimulus to the proposal for restoring the Abbey Church, the subscriptions to which continue to flow in from many and distant sources. It will be remembered that a meeting was held in April last, "to consider the best means of restoring and upholding the Abbey Church of St. Alban's, and of obtaining for it the dignity of a cathedral," when a report from Mr. Scott was read, and a large sum of money, now increased to nearly 8,000*l.* was subscribed. The sum required to render the building fit for cathedral uses is about 12,000*l.* and for works which, on the ground of consistency, should follow, about 5,000*l.* more. The historical interest attaching to St. Alban's Abbey Church makes its maintenance an object of national concern, and, remembering the sum of money that was subscribed in a short time when York Cathedral was partly destroyed, and that when, more recently, Doncaster Church was burnt, 30,000*l.* were subscribed in a few days towards rebuilding it, we feel little doubt as to the success of the movement in favour of St. Alban's. Its claims are great.

"Founded," as the Report says,—"in the days of Constantine the Great, in honour of England's first martyr, and within ten years of his martyrdom, it is probably the earliest in its authenticated foundation of any church now existing in Britain; and possibly the only instance of a church clearly proved to be the lineal successor of one of those built on the very first establishment of Christianity in our country; for we are informed that, the church first erected being small, the Pagan Saxons disdained to destroy it according to their usual practice; so that it survived the second period of idolatry, and was standing when the Saxons themselves embraced Christianity. Bede distinctly says that this Romano-British Church of St. Alban remained in his days; and a century later the body of the martyr, which had been removed during the Saxon invasion, was restored to the ancient church by Offa, king of Mercia, and an abbey founded in connection with it."

Whether King Offa rebuilt the church itself is uncertain; but, from some fragments of evidently Saxon date, it would appear probable that it was rebuilt either then or shortly afterwards.

The two last Saxon abbots collected vast stores of materials from the ruins of Verulam for the rebuilding of their church, a work carried into execution by the two first Norman abbots; on a scale so gigantic as even now to astonish the beholder. The nave, or western arm of the cross, alone measured internally no less than 270 feet in length, and the total length of the church appears to have been as much as 450 feet. It had no less than six apsidal chapels, besides the great apse containing the high altar and the shrine of St. Alban; and its dignity externally was enhanced by three towers; one at the intersection of the cross, and two in the western façade. The whole edifice, in its perfect and unaltered state, must have been dignified and noble in the highest degree; though (being built entirely of Roman brick, and covered both within and without with an incrustation of plaster) its beauty was the result of outline, proportion, and vastness, rather than of architectural detail: the stern severity of its interior was, however, relieved by costly accessories, and by the enrichment of every part of its surface with painted decorations, of which remains may still be traced, wherever the early surfaces remain. The painting is usually of a very simple character: the plastered surface is divided into the forms of stonework, by thick red or murry-coloured lines; some single, others double. In the arches the voussoirs thus represented are sometimes of alternated colours, and the soffites of the arches painted in some simple geometrical pattern, varying in each arch. In other parts the decorations were much more rich; consisting of bands of Norman foliage of much beauty, with figures and animals.

We have on several previous occasions given particulars of the building, both descriptive and pictorial, and in our present issue we add some farther illustrations.* The building is full of story:—

> "Where'er we move, or cast the thoughtful eye,
> Some memory starts, some form is sweeping by;"—

and beyond this it is a perfect study of the architecture of the middle ages. To adopt the words of the report,—

"Not to dwell upon the fact that its walls are composed of materials from ancient Roman structures (probably including also those of the church erected under Constantine), and that several architectural fragments remain of undoubted Saxon date,—we have in the building, first, a specimen on a vast scale of the earliest Norman architecture forming the great bulk of the building, including also the great central tower: we have, secondly, an extremely beautiful specimen of the later and more enriched Norman, in the passage or "slype" at the extremity of the southern transept: thirdly, we have, in the incipient works in the west front, including probably the three beautiful western porches, works of the earliest Pointed Architecture, executed in the days of King John; and in conjunction with these, and on either side of the nave, we have a majestic specimen of the same style in its future developement, executed early in the reign of Henry I.: fourthly, we have in the choir a highly finished work of the end of the same reign,—evincing the rapid developement and refinement of the art at that period; and adjoining this, in the half-ruined eastern aisle, is a truly exquisite specimen of the same style slightly more advanced, and probably executed in the time of King Edward I. In the nave again, in the eastern half of the south side, we have a most noble and magnificent specimen belonging probably to the close of the same reign; and in the exquisite Lady Chapel, we have the middle pointed or decorated style in its fullest developement; while, lastly, in the monumental chapels of Abbots Wheathampstead and Ramridge, and of Humphrey, duke of Gloucester, and in the magnificent altar-screen—rivalling and closely resembling that at Winchester—we have splendid specimens of the closing period of Gothic architecture; and, unfortunately, in many insertions into the older work, we see numerous instances of the decline which preceded its final extinction."

It is doubtful if a more complete series can be found elsewhere. The Norman passage, or "slype," referred to above, is the subject of one of our present illustrations.† This adjoins the end of the south transept, and was the passage to the chapter-house built by Robert de Gorham, who was bishop from 1151 to 1166. It is almost the only remaining portion of the abbey buildings, and is more elaborate in design than any similar passage-way that we remember. It is arched over in a plain, semi-circular form, with brick, springing from a cornice, beneath which the side walls are faced with an arcade of intersected Norman arches, thickly set with moulded bands, reel-shaped, and enriched with variously sculptured capitals, some of which we have shown more at large. A doorway at each end has been walled up, and a side opening pierced into the transept. The clear dimensions of the passage, according to Messrs. Buckler's "History," are 29 feet 6 inches in length, by 9 feet 11 inches in width.

Our other illustration (over leaf) represents the Watching Chamber on the north side of the Saint's Chapel, wherein a monk was posted as a guard of honour to the shrine.

On the frieze of the structure is a series of carvings, now much mutilated, representing the memorable events of Alban's history, and other singular subjects. Beneath are almeries or lockers, in which the reliquaries and the sacred vestments were deposited.

Some idea of the use made of the sacred edifice during the civil wars of the seventeenth century may be formed from an inscription, effected probably by the point of a knife, and now almost obliterated, on the south side of the north doorway in the screen: "Hugh Lewis souldier in his Ma^jes^ Army taken prisoner at Ravensfield Northampton scr y^e . . . . day June 1645." This part of the abbey church has long been used as the spiritual court in which visitations are held, and is designated the presbytery.

This large mass of woodwork, of about the time of Henry VI. entirely occupies the whole of one of the Early English arches on the north side, immediately behind the great altar. In some parts the more ancient work has been cut away, and in others filled up with plaster, in order to make this more modern structure fit properly in its place. In the foreground of the engraving some steps are shown, which lead to the small vault, containing the remains of the "good" Duke Humphrey, brother of Henry V. who was murdered at Bury, and afterwards brought for interment close to the shrine of St. Alban: the skull and some other portions of the body are still visible in a leaden coffin, which has been partly cased recently with wood. It has been since found necessary to place an iron grating in front of the vault, to preserve the bones of the "famous statesman and encourager of learning" from being pilfered from their resting-place. A curious painting of the Crucifixion is visible on the wall of the vault.

The oblong space just beyond the entrance of the vault—which is, by the way, the only underground part of the abbey—is the site of the shrine of St. Alban. This end of the abbey has evidently been painted: where the whitewash has been removed, the colours are found wonderfully perfect. A kind of madder crimson, which forms part of the decoration, is remarkable for its brilliancy.

Attempts have been made at various times to save this fine old abbey church from ruin. James I. was so greatly struck with the beauty of the edifice, and the disgrace attached to the country by the dilapidated state in which he found it, that he issued a royal brief for a collection to be made throughout the kingdom for the purpose of raising funds for repairing it. In 1680 a similar course was adopted by Charles II. and afterwards by George II. But on these occasions only temporary repairs were attempted, and nothing of any importance was done until the year 1833, when further subscriptions were entered into, and the abbey, in part, put into a comparatively good state of repair.

* See vol. xiii. p. 217, for an account of a visit to St. Alban's, with a plan and other illustrations; also vol. v. p. 543. In vol. vii. p. 383, will be found a view of the mutilated altar-screen.

† See p. 331.

ST. ALBAN'S ABBEY CHURCH. THE WATCHING LOFT, IN THE SAINT'S CHAPEL.

It is, however, distressing to witness the condition now of certain portions of the building, and that, too, notwithstanding the constant care and well-directed exertions of Dr. Nicholson, the rector. In part of the nave the thick coatings of whitewash have been scraped off, and the sharp and beautiful work of the rich ornamentation is made visible. Most of the oak doors and presses are undergoing a thorough cleansing. Fragments of shrines and ornaments have been collected, and carefully stored in niches, ready to be put into their proper places when required; and we may hope that it will not be long before they will be required, and that this gigantic monument of ancient piety and skill, this record of a thousand years, will be made fit for its holy purpose, and preserved for the contemplation of coming generations. Those

> "Whose souls the magic Present hath not bound;
> Who live to think, and dare to gaze around;
> Who fain would read man's history, hopes, and fears,
> Writ on the dark remains of vanished years,
> Can [illegible] ruins laid waste and bare,
> And o'er Art's past creations turn and glow,"—

will reap a large harvest of enjoyment from a visit to St. Alban's.

A FOREIGN WRITER'S REVIEW OF THE LILLE COMPETITION.

THE following is a translation of an article in a Paris journal from the pen of Henry Cauvain, which, as giving an account to the French people of the "concursus" lately held at Lille, will gratify many of our readers. The English architects will be glad to see the unbiassed criticism of an intelligent foreign writer on a subject to all of great interest.

An event has just taken place at Lille which, in more respects than one, is of great interest, and, as such, merits attention. We allude to the concursus opened in that city to the architects of every country, for the erection of a cathedral, under the title of "Our Lady of the Vine Arbour and St. Peter" ("Notre Dame de la Treille et de Saint-Pierre"), and to the extraordinary and unexpected results, which are in themselves very curious, and which have been brought to light by this solemn trial.

We shall here, at the beginning, be permitted to call attention to a fact which may perhaps at this moment have attracted notice from one end of France to the other: it is, that in proportion to the development of the wealth of a country, so also is awakened the love of the fine arts in every direction. Our civilization, although it has allowed a large scope to industry, has not by any means relinquished the cultivation of intellectual matters. Our towns are every day changing; and greater care than before is taken of the public health by the adoption of proper means for its preservation; while, at the same time, monuments of a civil and religious kind spring up, and statues are dedicated to our great men as well as to other men of worth. Paris is naturally at the head of this movement: it is not necessary for us to dwell on the wonderful works which are there accomplished,—especially those of the last five years, under the auspices of a prince who seems to have adopted the device applied by Augustus to Rome, "I found it built of bricks and I leave it of marble." The example set by the capital is followed and emulated by the whole country. At the two extremities of the empire, two cities, both remarkable for the commercial tastes of their inhabitants, and both having for a long time been deprived of the monuments of art, although the first was, in the early ages, the cradle of Grecian civilization in Gaul,—and although the second had received from the generosity of the Middle Ages many admirable edifices, since destroyed by the hand of man,—Marseilles and Lille are deserving of being specially mentioned. Each of these two cities is now labouring to effect the greatest enterprise that can be entrusted to architecture, namely, a cathedral; that is, the monument which is always to be considered as the loftiest expression of human art under the inspiration of the Divine Intelligence. Each of those cities has chosen a style for itself. For the cathedral at Marseilles the preference has been given to the Byzantine style; and its cupolas, resembling those of St. Mark, at Venice, will be observed by the eyes of the approaching sailors from a distance, brilliant from being gilt, in the azure sky. For the cathedral of Lille, the Ogival style has been selected, and its light spires and its hardy little columns will be well delineated in the frequently murky air of its northern climate. It is not possible to refuse every praise to these intellectual selections,—to the Oriental architecture, with its majestic profiles and its radiant ornamentation, on the shores of the Mediterranean; and, on the Flemish soil, to the Gothic architecture, with its thoughtful inspirations and its mystical splendour.

This Gothic monument at Lille has, from the circumstances attendant on its origin, assumed a character altogether special. From time immemorial, the town of Lille has been placed under the patronage of Notre Dame de la Treille. Although it may be difficult, if not almost impossible, to say whence this odd name has been taken for the patronage of a town in a country where the grape scarcely ripens;—it is certain that, within a very short time after the city was founded, the traces of the respect shown to Notre Dame de la Treille prove the fact of the worship. A miraculous image of that holy patroness was placed in the collegiate church of Saint Peter, formerly a magnificent edifice, erected by the piety of the first counts of Flanders, on the ruins of a Roman monument. A solemn procession was founded by the

piety of the Countess Margaret of Flanders; and the result was seen in the enormous multitudes which always flocked to join in it. All these traditions, which were in themselves so worthy of respect, were shattered into fragments by the Revolution. The collegiate church of St. Peter—the finest ornament of the city—was thrown down by the strokes of the hammer, when the adherents of the goddess Reason cared but little for an edifice built by Christians in the thirteenth century. The tombs of Louis de Male and of his successors, although then considered to be exquisite *chefs-d'œuvre*, were broken to pieces, and sold at the price of copper. The zeal of one pious man secured the preservation of the image of Notre Dame de la Treille, for which he found an asylum, until better times, in one of the chapels of St. Catherine's Church, which was previously known as being possessed of one of Ruben's grand pictures, the magnificent gift of two private citizens of the sixteenth century, Jean de Seur, and his wife Mary Paltin; by which means, at that time, two modest parishioners showed their veneration for their church.

During a solemn jubilee, two years ago, the banner of Notre Dame de la Treille was raised at Lille. On many occasions we have embraced the opportunity of establishing facts, which prove that amongst us of this age the strong faith of our ancestors is again awakened. The railing incredulity of the eighteenth century, the hatred and fury of the revolutionary period, have become for us anachronisms: on every side we see revived, with devotional eagerness, the recollections of ancient France, which is thereby for the present reconciled to modern France. The chain of our country's traditions is renewed, never, it is to be hoped, to be again broken. The festival at Lille, which from its *éclat* and its magnificence will long live in the memory of our contemporaries, was one of the happy symptoms of this powerful renewal in the bosom of our present civilization of the ideas, of the manners, and of the customs of former times.

It was in the midst of the rejoicings of this solemnity, that, as it were by the spontaneous emotion of the inhabitants, the thought dawned suddenly upon them of building a magnificent temple in honour of Notre Dame de la Treille. The proposal was hailed with delight; and it has already borne fruit: men of devotedness and enthusiasm have easily been found to carry it into full operation. Yet how much soever the merit of the organisation is due to the last-named, it undoubtedly is a very significant fact that the resolution emanated from the will of the entire city, in the midst of the attractions of public enjoyment; and that this inspiration of universal suffrage was, so to say, a vote for founding a cathedral. At this period, when the regular action of the administration has taken the place of every popular movement, there is in this fact something to remind us of the epochs of sincere and decided faith, when the marvellous creation occurred of such numbers of religious edifices, under the decree, in some measure of the fervid zeal, of the people.

It was decided that a concursus should be opened to the architects of every country. Prizes of considerable value, and gold and silver medals, were voted to stimulate the zeal of the candidates. Very recently we gave great praise (in reference to the premium offered by M. Veron) to the forms of a concursus for the encouragement of literature; but, perhaps, in questions of art, the plan of a concursus is of far greater utility. All the efforts of literary men obtain with ease the honours of publicity. The public press, the reviews, the booksellers, put the works of thought into circulation, and the names of the authors soon become known. But such cannot be the fate of the works of art, and especially of drawing—and above all, of architecture. In their case, the artists have to labour in solitude,—a thankless task, which keeps them during the dull hours of night in their studios, or their workshops. How many architects of great merit are there who, after they, in their reveries, had made plans for building palaces, were never able to build any thing more than pigeon-houses. The concursus serves to bring from their hiding-places men of knowledge and of study, with their plans ready in their hands; and then they become known by the light they create and diffuse around them. Then are they enabled to reveal their talents, to exhibit their labours, and to draw inspirations from the works of others. In times of yore, antiquity committed no mistake in such matters. It was by means of the concursus that the great architects and the great sculptors of Athens conquered and won their reputations. Phidias and Praxiteles, in the same way as Eschylus and Aristophanes, were indebted to the concursus for their most brilliant triumphs and their most splendid crowns. In modern times, the concursus, every time it has been employed, produced the best results. On this occasion we shall bring to mind but one concursus, and that is the one held at Florence, and which produced for that city the gates of the Baptistery, those gates which, according to the expression of Michelangelo, were fit to be the gates of Paradise. At this memorable contest, which forms a luminous epoch in the history of the art, a young man twenty-four years of age had the glory of carrying off the prize from artists of genius, as were Brunelleschi and Donatello, who themselves hastened to admit their being vanquished, and to decree that the palm should be given to their fortunate rival Lorenzo Ghiberti.

The city of Lille is therefore to be congratulated for having adopted the plan of a concursus. We shall now add that it was well done to open the competition to foreign architects. We know that against this proposal very strong protests were made. The concursus at Lille ought, it was contended, to have been kept sacred for French architects alone: the work was a French one, and French hands alone ought to begin and end it. We have even been assured that the resolution adopted by the Lille committee had given umbrage to a certain number of French architects, who, therefore, of their own accord abstained from interfering. Yet we cannot, without some pain, admit this fact to be exact. If it really be the case, those who abstained and withdrew from the contest must now regret their having done so, since they thereby contributed to give the vantage-ground to foreign rivals.

As for us, we heartily approve of the mode adopted at Lille, which, by inviting to the contest the architects of every country, has performed an act truly *catholic* in the real sense of the word, so that the presence of England, of Germany, of Belgium, at this peaceful battle, has shown what was the state of the art in these different countries. If the result of the contest has, contrary to general expectation, given the superiority to foreign architects, a powerful motive of emulation will be found therein to excite our artists to exert themselves, so that they may soon regain the ground lost. In France the artists, like the soldiers, do not see in a defeat anything more than a signal for fresh exertions, and as giving an opportunity for a glorious revenge.

Be that as it may, the concursus at Lille was most brilliant. There were forty-one competitors. Of this number, fifteen belonged to France, fourteen to England, and one to Scotland: Rhenish Prussia sent three; the Grand Duchy of Baden, two; Austria, one; Hanover, one; and Silesia, one; making in all eight for Germany. Holland, the Grand Duchy of Luxemburg, and Belgium, were represented each by a project. It is now seen that, in the number of competitors, France and England were equal and completely rivals, the contest between whom was hot and warmly discussed. Various devices, according to usage, concealed the names of the combatants. The jury for examining presented in the fullest degree all the guarantees that could be desired as to enlightenment and impartiality.

The models and plans of the forty-one competitors were all placed in order in a vast locality admirably appropriated for the purpose; for, in reality, very spacious halls were required to contain them all. In fact, besides the plans which were to serve in showing the projected edifice, in its general aspect, in the different sections, and in the details of its construction, the candidates were required to give satisfaction as to the complete ornamentation of the monument, and as to its suitable religious furniture. The programme required unity of style in the edifice, in the ornaments, and in the necessary furniture. A very wide field was thereby opened to all the competitors. A cathedral of the thirteenth century, with its chapiters, with its rosaces, with its verreries, with its portals, with its altars, with its episcopal seats, with its baptismal fonts,—is nothing less than a poem in completeness. To attempt such an enterprise, the imagination and the judgment must agree; science and creative talent must accord. A thorough, profound, and familiar knowledge of Christian symbolism is necessary. The furniture in a special manner demands all the erudition of a Benedictine professor, in union with the exquisite taste of the artist. In fact, if our Middle Age cathedrals were still standing, they might serve as starting-points for modern architects; but the moveable matters of furniture have in almost all places perished, being in this spot destroyed by the iconoclasts, and in that one being displaced by the selection of made-up articles. Thus, then, among the churches of the Middle Ages, some are naked and desolate,—the hands of the Vandals have been felt in these edifices,—while those others are encumbered with inconsistent objects and ridiculous ornaments, where the bad taste of the last century has effected an invasion. Men of intelligence, who understand what is to be restored, can alone reinstate them in their ancient splendour and their primitive unity.

In this point of view, the concursus at Lille presented very high interest. The throng of public spectators, previous to the enlightened appreciation of the examination jury, was a recompense for the exertions of the candidates. The projects as exhibited,—almost all, deep, skilful, and conscientious studies of the subject—one-half, at least, raised themselves above the ordinary level by the manifestation of real talent: seven or eight were worthy of the very highest praise. Amongst the last-mentioned, principally were to be distinguished, in connection with the work of erudition indispensable in the circumstances, the striking characteristics of invention and originality. But the cleverest imitation work is still but an imitation; and if a work of art is dragged along the beaten pathways of imitation, it from necessity is of the middle rank; it does not possess the qualities of life, for the generous blood of spontaneous and free inspiration ought to be felt beating in its veins.

At the Lille concursus there was found, in at least a certain number of the projects, the complete fulfilment of all these essential conditions. Three of these projects were placed by the jury in the first rank, and were remarkable amongst all for the power of their conception, as well as for the profoundness of archæological knowledge displayed in them.

It is already well known that the committee, in drawing up the programme, had imposed on the candidates a style and an epoch. The Cathedral of Notre Dame de la Treille was required to be of the Ogival style, in the system of the thirteenth century. This selection deserves the highest approbation. We do not thereby maintain that the Gothic is the only Christian art, as some persons suppose: on the contrary, we hold that the spirit of Christianism is by no means emprisoned in one sacramental form: we find it equally strong, equally brilliant, in the magnificent encirclement of the Basilicas, under the arches of the Roman churches, and under the imposing dome of St. Peter's, at Rome. The sentiment of religion does not dwell exclusively in the cathedrals of the Middle Ages: it is residing at St. Mary's de Transtevere, in the Cathedral of Pisa, in Notre Dame la Grande at Poitiers, as well as in the churches of Notre Dame at Chartres and at Rheims. It is not right to be more exclusive in the domain of ancient art than in the domain of sacred literature and of pulpit eloquence. However admirable may be the commanding position of St. Thomas of Aquinas, and St. Bernard, no one could, without injustice, sacrifice to them St. Augustin and St. John Chrysostome, Fenelon, and Bossuet. That the art of Pierre de Montereau and of Robert de Luzarche is profoundly catholic we all frankly admit; but that is not a reason for our slighting with disdain Michelangelo, Bramante, and Palladio.

We, moreover, with perfect goodwill, acknowledge, that after taking all things into consideration, as well with reference to the climate as to the traditions and the local conditions of the site, the choice of the Ogival style was the preferable one for the Cathedral of Lille, where it is to be erected on an eminence, which sustains the Chateau du Buc, which formed the cradle of the Flemish city at the dawn of the Middle Ages. It is destined to console the city for the loss of the collegiate Church of St. Peter, which was erected at the time when Philippe-Auguste reigned; and also for the loss of the Church of St. Stephen, a magnificent Gothic monument, which was ruined by the Austrian shells during the siege of 1792. Such were the reasons that produced the adoption of the Ogival style. The choice being once made, it was quite natural for those who fixed it to fix also their attention to the thirteenth century, which is the heroic age of this kind of architecture. The Sainte Chapelle of Paris, erected in three years, by Saint Louis, and offering also all the characteristics of unity of inspiration, is, in our eyes, the Parthenon of the Gothic art.

It now remains for us to make known the results of the concursus at Lille.* * *

On summing up, we find that England obtained two prizes, the first and second,—three silver medals and three honourable mentions, being in all eight nominations on fourteen candidates. France obtained one prize, the third, one gold medal, one silver medal, and one honourable mention, that is to say, four nominations on fifteen candidates. Germany obtained four nominations; while Belgium, Switzerland, and the Grand Duchy of Luxemburg, bore away one nomination each.

The result is, at the first glance, enough to surprise us. France, in all matters of art, has exercised such an incontestable supremacy, as the fact was proved so splendidly during the Universal Exhibition of 1855, that this victory of England, on the ground of religious architecture, has in itself something altogether unexpected. Besides, it is rather singular, we must admit, that a Catholic country such as France is, should yield the palm, at a solemn concursus, to a Protestant country, and that, too, for the object of creating a cathedral. We have, also, to add a circumstance, which gives greater *éclat* to the triumph borne off by the two first prizes: it is the admitted and consummate merit of the architects who took the first prize. The clever restorer of the Sainte-Chapelle, the author of the Church Saint-Nicholas at Nantes, and of the Church of Belleville, was, it must be allowed, a formidable competitor. The projects which have been crowned must have contained within them very high qualities of science, of invention, of style, and of taste, to gain the precedency over their learned and ingenious rival.

But if the result of the concursus has disappointed the general expectation, it will not appear so extraordinary to observers who have, with due attention and with eyes of careful experience, noticed the movement of mind on the other side of the Straits of Dover. There, in proportion as the prejudices of Protestantism grow weaker, a school of art has been formed and augmented. By little and little the liking has gone down for the uncouth architecture of columns, which has infested London and England with so many awkward and clumsy buildings; and the new school swears, by the climate of Great Britain, that it will, with predilection, with ardour, study the forms of the national architecture during the Middle Ages. This impulse being once given, the current of ideas has been rapid, resolute, and irresistible; and therein is to be found another evident proof of the positive and vigorous character of the English people. Scientific associations have been established in the principal towns under the name of Ecclesiological Societies; and in their treasuries money, as well as reason, abounds. Men of talent are largely remunerated: great publications have been undertaken and brought to perfection. Under the fertilizing influence of such encouragement, numbers of religious edifices have been erected; and all have seen rising up on the banks of the Thames, as a testimonial of the living power and force of the renovating movement, the prodigious monument, the Houses of Parliament, having an appearance fairy-like, and at the same time grand in the extreme, if indeed a strict and severe taste did not therein find more than one imperfection.

However slight may be the study applied to this monument, in the exterior as well as in the interior, and also after even a cursory glance at the works recently published in England, one cannot but be struck with the enthusiasm of imagination, the fertility of thought, and the vivifying energy exhibited by the English architects. One cannot be long examining their acts without discovering another source of merit, and which, perhaps, is, in itself, of high value;—that is the talent of appropriating the most remarkable things. In France, it is generally admitted, although there may be some exceptions, that the architects take but little trouble with anything but the façades and the staircases. Provided they succeed in these two points,—and God knows, it is not always that they succeed in them,—they take but little pains with the other parts. People are then lodged as well as they can be, in the newly fitted-up cage, brilliantly decorated on the exterior, but as incommodious as can be in the interior. You may visit the greater part of our modern edifices, and you will find that this observation is quite correct. In England the rule is to consider, beforehand, what the building is intended for: care is then taken that all the parts should contribute to the necessities for which it is required; and all kinds of ingenious plans are brought into play, in order that it may have not only a fine appearance, but be also a comfortable dwelling-house. The architects, thanks to their conscientious preparations, do not perpetrate those cruel blunders which can be pointed out by thousands in the productions of modern art, as well in Paris as in the country.

Such were the distinguishing qualities shown at Lille in the projects that emanated from the English artists, that the Examination Jury declared them worthy of being publicly rewarded. The object was to build a vast church fitted to the fulfilment of all the conditions of the Episcopal office (for Lille cherishes the ambition of installing hereafter a bishop in it) with three naves, a transept, absidal chapels around the sanctuary, a crypt under the choir, and at the entrance, two chapels—for the dead and for the baptismal fonts. Besides all these, it was necessary to produce sketches for the internal arrangement. This extensive programme has afforded a complete triumph to the schools of England, which have, during the last twenty years, dedicated especial attention to the nearly exclusive study of the Ogival art.

We do not, nevertheless, look upon this result as in any respect alarming for art in France. To men of judgment and of talent, such as our architects, a defeat like this is but a notice, and nothing more. The concursus at Lille tells them that a competition worthy of their emulation has arisen in England. That is enough to stimulate their zeal and spur them forward to emulate their rivals. On the first opportunity, we are convinced that they will efface the recollections of the defeat, by a brilliant victory. Sophocles himself was not always the victor in the combats of literature.

* This we have already done

ON THE BRIDGES AND VIADUCTS OF THE PRESENT DAY.*

THERE are few public works (commercially speaking at least) of greater interest or importance than bridges and viaducts. The necessity of good roads of communication from one part of a country to another, and the impossibility of completing them without erecting bridges over streams and viaducts over valleys, have given rise not only to the works of the present day, but also to those stupendous monuments of antiquity which have been handed down to us. With the magnificent bridges, viaducts, and aqueducts of the Romans every architect must be well acquainted, and it is indeed not long since that ancient Roman roads and modern British railways were compared by a very able authority before the Institute. In consequence of the immense extension of the railway system during the past thirty years, a more extensive field of bridge building has been opened than at any previous period. The fact that in 1852 fifteen thousand miles of railway had been constructed in Great Britain alone, and that these required, on an average, three or four bridges per mile, will give a total of fifty thousand bridges, large and small.

In speaking of the bridges and the viaducts of the present day, it will be hardly necessary to observe that their great and striking peculiarity is to be found in the use of iron; and though, as architects, we may be impressed with the superior dignity and proportions of stone bridges, it must be granted that iron has many advantages compared with either stone or timber, as it is much lighter and more economical in the first outlay than the former, and more durable than the latter. It must not, however, be forgotten that, although iron construction may be considered the great invention and distinguishing peculiarity of modern times, there are also some very fine works in stone, brick, and timber. In the two former, however, no progress worthy of peculiar notice has been made, bridges of larger span having been executed by the Romans centuries ago. The largest span in stone executed in England is that over the Dee of 200 feet; but ancient examples are recorded to have been from 50 to 100 feet wider, which, with reference to the age when they were executed, must have called for a comparatively greater amount of skill. It is in iron, therefore, with respect to the span, that the great merit of modern works consist: the changes in the different modes of applying this material have been gradual and progressive, and very similar to, though somewhat more rapid than, the changes in the different styles of architecture. The first iron bridge was erected about sixty years ago, and partook of the character of its predecessors in stone, being formed of cast iron voussoirs, or wedge-shaped blocks put together in ribs. From that time to the present there has not been much improvement in the construction of this class of iron bridges, and the span has only increased from 200 to 240 feet, which would appear to be the proper limit. Soon after the introduction of the cast voussoir principle, cast-iron beams were used for small spans of 50 feet, which eventually, by combination with wrought-iron trussing, reached as far as 100 feet. The greatest improvement was the formation of girders entirely of wrought-iron, which soon followed the production of rolled plates and bars of different forms and sections. This in a few years led to the execution of spans of 460 feet,—the largest of rigid roadways with a level headway beneath, yet constructed. In suspension bridges, spans on this principle have been executed of upwards of 1,000 feet. But as these, from their vibration, are quite unfit for the passage of heavy weights in rapid motion, they will not be treated of on the present occasion.

Cast-iron bridges may be classed as follows: the Arched Rib, the Trabeated, and the Combination Girder. Wrought-iron bridges consist of the Tubular Girder, the Tubular Bow Girder, the Large Tube, and Lattice Girders, with several varieties of combination.

The first iron bridge constructed in England is that over the river Severn, near to Colebrook Dale. The design appears to have originated with Mr. Pritchard, architect, about the year 1773, and the works were completed in 1779. In this bridge five arched ribs of cast-iron support perpendicular spandril pieces, which carry the roadway. The ribs are nearly semicircular, and have a span of 100 feet.

Sunderland Bridge, over the river Wear, the next cast-iron bridge erected, was designed by Mr. Rowland Burdon, in 1792, to whom a patent was also granted, for "a certain mode or manner of making, uniting, and applying cast-iron blocks to be substituted in lieu of keystones in the construction of arches." This bridge consists of six arched ribs of a segmental form, 200 feet span and 30 feet rise. Each rib is 5 feet deep, and consists of 105 separate blocks.

Buildwas Bridge, over the river Severn, by Telford, is like the foregoing,—a single arch, 130 feet span, with 27 feet rise. It consists of three arched ribs, 3 feet 10 inches deep.

* Read by Mr. John Clayton, Associate, at the ordinary general meeting of the Royal Institute of British Architects, May 26th

Boston Bridge, by Rennie, is remarkable for the slightness of its rise, which is 4 feet, with a span of 100 feet.

Southwark Bridge, also by Rennie, has the greatest span executed, that of the centre arch being 240 feet, and of the sides 210 feet. The rise of the centre arch is 24 feet, that of the side arches proportionate. The arches consist each of eight ribs, 8 feet deep at the springing, and 6 feet at the crown. Each rib is in fifteen pieces, cast of much larger masses than in the previous works.

The New Bridge, Westminster, in course of construction, will also prove a valuable addition to this class of works.

Upon simple cast-iron beams it will not be necessary to say much. The first application of this material as a beam is due to Boulton and Watt, after whom it was extensively applied in construction by Sir R. Smirke. Although useful in buildings, its fragile and treacherous character renders it hazardous for railway purposes. Capable of bearing a large amount of dead weight, it can be easily broken by a cross blow or the sudden shock of a passing train. Its span has been limited to 40 or 45 feet, and this only under very careful treatment.

With the view of remedying the defects of cast-iron girders, recourse was had to trussing them with malleable iron. Owing, however, to the unequal expansion and contraction of the two metals, and the fact that the two were seldom brought into action at the same time, the success of these beams has been very doubtful. They have been used in spans of 50 to 100 feet, but certain failures appear to have led to their disuse.

The Lea Bridge was erected about ten years ago. The total length is 70 feet, or 66 feet clear bearing. The girder was composed of two castings of a uniform depth of 3 feet, bolted together with wrought plates to the joints and trussing bars.

Dee Bridge, Chester, was the largest bridge of the kind. It crossed the river in three spans, and had a double line of rails with a pair of girders to each. The total length of each girder was 109 feet, or 98 feet clear bearing. It had a uniform depth 3 feet 9 inches, and was formed of three separate castings. Cast-iron plates, 13 feet long and 3 feet deep, were bolted over the top of the joints, and a set of trussing-bars was placed on each side of the girder. The thickness of the web or central part was 2⅛ inches, the top flange 7 inches wide, the bottom 2 feet. The girders sustained the usual test, yet gave way under a much less load. The failure has been attributed to a variety of causes, but a not unfrequent one has been overlooked, viz. the manner in which the roadway was made to take its bearing on the girders. As a general rule, too much care cannot be taken to give the weight a uniform bearing in a vertical direction, on either cast or wrought-iron girders, more especially the former. Placing the planking or beam on the inside flange will, on the passage of every weight, cause a tilting vibratory motion. If the roadway cannot be placed altogether on the top of the girder, it should be carried underneath it and suspended with plates and bolts.

Tubular girder bridges owe their origin to the manufacture of wrought plate iron, which was first used in ship-building. Great improvements were soon made in the mode of joining and rivetting these plates, and the T, L, and double L iron, manufactured by Mr. Fairbairn, led to the great works which were carried out after its application to railway purposes.

The Liverpool Canal Bridge, on the Blackburn and Bolton Railway, executed by Mr. Fairbairn, was the first application of these girders: the span is 60 feet. The Liverpool Landing Stage Bridge, erected by Mr. Fairbairn for Sir W. Cubitt, spans the space between the pier and the floating pontoon in deep water. Its total length is 152 feet and 142 feet between bearings.

The Gainsborough bridge, erected by Messrs. Fairbairn for Mr. Fowler, crosses the river Trent at the angle of 50 degrees. It consists of two spans, each of 154 feet. There are two girders to each span, carrying a double line of rails: the girders are of an uniform depth of 12 feet: the top is strengthened with a double chamber 3 feet wide by 1 foot 3 inches deep: the width of the girder below is 2 feet 6 inches. The sides of the girder are strengthened by an arched rib of a double L shape, 1 foot deep: the plates are 2 feet wide and half an inch thick.

The Britannia Bridge, by Stephenson, has been fully described, and it is only necessary to give chief dimensions. It consists of four spans, the two main 460 feet, the two side 230 feet, and it is 90 feet clear of high-water mark. There is a tubular girder to each line of rails, the dimensions of which are 30 feet by 14 feet 6 inches. The form of this tube is square, and it is stiffened at the top and bottom with small cells, which answer to the top and bottom chords of the lattice girder.

The High Level Bridge, Newcastle, also by Stephenson, forms a junction between several railways. It is remarkable for carrying a railway above and a roadway for street traffic below, and consists of six spans of 125 feet: the extreme height is 125 feet, and there is a clear headway of 80 feet above the water line. The weight is carried by arches on the level of the roadway, the bottom of which is suspended from it. The piers measure 50 feet by 16 feet, and are lightened by arches. The most striking and peculiar feature is seen from the roadway, which presents a series of dark arched ribs, with light bursting through the bars supporting the sides. The whole design is exceedingly good, and the exterior handsome.

Before entering upon the subject of lattice girder bridges, it is necessary to glance at the timber viaducts, as it is from them that the former derived their origin.

The most remarkable of these structures are the American. The greatest span is that over the Portsmouth river, 250 feet; the greatest height that over Genesse river, 230 feet. As English examples we may mention Dinting Vale, with a span 120 feet by 125 feet; Landore, 109 feet by 90 feet. Amongst the earliest wooden bridges are those designed by Palladio, three of which have 100 feet span: two are framed on the ordinary principle of trussing, and the other on the arched rib or voussoir principle.

The Portsmouth River Bridge is formed on the same principle as the last, with the addition of diagonal bracing to each voussoir. Don Bridge, near Aberdeen, is composed of a strong arched rib, the spandrils between which, and the level roadway above, is a filling in of framing distributing the pressure. Schaffhausen Bridge is similar in arrangement to the earliest American. The weight is carried by a series of raking struts, which radiate from one or more points on piers or abutments, they are bolted to the top and bottom chords of the girder, and transfer the weight of the roadway at regular intervals to the piers.

The Portage Timber Viaduct, the loftiest and most interesting piece of timber work of the kind, crosses the Genesse river at an altitude of 230 feet. This work, designed by Mr. Silas Seymour, was commenced on the 1st of July, 1851, and completed in a period of only thirteen months and a half. The whole length is 800 feet: the piers, 50 feet apart, are formed of wooden trestles, standing on a base of stone 24 feet high. The trestles are formed of timbers 14 inches square at the base, and 1 foot at the top; the braces to the piers and girders are 6 inches by 12 inches: the number of vertical posts at the base is twenty-one, which diminish to fifteen at the top. Three rows of girders, 14 feet deep, formed of diagonal braces, support the roadway. The cost of the bridge was 35,000*l.*; the quantity of timber 135,500 feet. It was estimated that a stone bridge would have cost seven times the amount, and that the interest would renew the whole three times as often as would be required. This may apply in America, but the economy of using timber is very questionable in England.*

ROYAL INSTITUTE OF BRITISH ARCHITECTS.—At the closing general meetiug to be held on Monday evening next, the 16th inst. the following paper will be read—"On the Resemblance between Mediæval and Classical Art, as exemplified in the Glass Paintings of the Twelfth and Thirteenth Centuries," by Mr. Charles Winston, Hon. Mem.

* To be continued.

VITRIFIED *v.* POROUS DRAIN-PIPES.

SOME months ago our great contemporary startled the public by a series of revelations, showing the fearful amount of deterioration which had taken place in our staple manufactures,—how that a good knife or an axe were scarcely to be had in Sheffield, and that our colonists preferred Yankee tools to those of our own make. Then, on the other hand, we had the case of the manufacturers, who showed that, if people would pay less for a spade than the price of the raw material, they could hardly expect the very best implement for their money. Doubtless in this, as in all similar matters, cause and effect mutually act and re-act on each other; and while manufacturers are prepared to underbid each other by cheapening and deteriorating their goods, the public will be equally ready to encourage the hurtful competition.

We have been led to these reflections by a discussion which has been recently taking place at the vestry of St. Marylebone, as to the comparative merits of the vitrified stoneware and the porous earthenware pipes, and a report made by Mr. Haywood to the City Commissioners of Sewers.

For the last few years an honourable rivalry has existed among the vitrifying potters in their manufacture, which has resulted in the production of very superior pipes: the thickness has been considerably increased, the body is more intensely vitrified, the form leaves scarcely anything to be desired; and the glaze being wholly silicious, resists every test. These are facts which it is in the power of every one to verify for himself, by a careful examination of those produced by any of the leading potters: the result has been a very general use of these to the exclusion of inferior productions, and consequent benefit to the public.

During the early introduction of the valuable system of pipe drainage, much disappointment was occasioned, and much opprobrium incurred, by breakages and accidents, arising from defective materials; since the great improvement which has taken place in the manufacture we scarcely hear a complaint. Now, however, the old story is beginning to be rehearsed, a less good article is in the market, and seeks to forward itself, like our Crimean axes, that would not cut; and picks and spades, that broke in the handling, by the usual recommendation of *cheapness*. The Marylebone vestry have advertised for *stoneware* pipes, and the porous earthenware manufacturers have sent in tenders, and have urged that their samples (which they admit are porous to the extent of 17 per cent.) are, if not equal in all respects, at least good enough for the purpose; and a sharp contest has ensued in consequence. Fortunately for Marylebone, Dr. Dundas Thompson is their medical officer of health, and Dr. Bachoffner a member of their vestry, both highly scientific men, well qualified to give an opinion on the subject, and they clearly explained to the vestry the difference between impermeable *vitrified* stoneware and superficially glazed earthenware.

Dr. Dundas Thomson, the medical officer of health having been asked to give his opinion, said,—"I may state that this is a subject to which I have paid considerable attention for many years, and my attention has been more particularly called to it since I received at your hands the appointment which I now hold. In examining the various nuisances which I meet with in this parish, I am in the habit of recommending a particular mode of drainage, and by your order these drains have been made of stoneware. Stoneware is totally different from earthenware. Earthenware is a porous, heterogeneous body, and not a homogeneous body. If you examine one of these pipes you will find that it adheres to the tongue, has not a surface like glass, but is in fact a mechanical mixture. What is the object of draining at all in forming the sewers and house drainage? It is to carry away completely and thoroughly from the houses to a distance from town all matter that contains materials which are likely to decompose and produce disease. If you have a porous material for carrying out this object, that porous material will allow the fluid to pass through—that is to say, by disorganising the body, passing through the pores of the material, and lodging in the sub-soil. In order to prevent all that, which would be equivalent to a cesspool, I have required that brick drains should be abolished as much as possible, and their places taken by stoneware pipes."

Dr. Bachoffner in the course of his remarks said,—

"It is true that the Aylesford pipe is slightly glazed, but this glazing is not due to the positive vitrification of the mass, as in the stone ware, but to a mere superficial layer of what is called lead glazing, similar to that employed in the common red pottery,—a glaze that is readily acted upon by chemical agents and sewerage water. It follows, therefore, that while the stone ware is impervious either with or without glaze, the non-permeability of the

Aylesford pipe is wholly dependent upon its thin layer of glaze, and should this be faulty in ever so minute a degree (which it is almost impossible to prevent when large quantities are manufactured), the whole mass is at once rendered permeable. The ill effects of permeability are infiltration and exudation, the probable injury by frost, and the chemical influence of the sewage matter on the substance of the clay. Our officer of health stated, in his last report, that 'it is of the utmost importance to prevent the sewage from percolating the subsoil of London through brick drains and porous pipes,' and I say you are bound to take notice of such an important statement as that. I believe that the glazing of the Aylesford pipes would soon peel off. I find that while hydrochloric acid decomposes the Aylesford pipe, the same acid, even in a boiling condition, has little or no action on the stone ware. As to the mechanical pressure, if you take the difference in the thickness of the two pipes, you will find the result greatly in favour of the stoneware pipes."

Setting aside for a moment all scientific arguments, the question would really seem to be the old one of Place Bricks *versus* Stocks. Every architect or surveyor in the profession has heard the same arguments repeated *ad nauseam*, and has experienced the same attempts to substitute the less expensive materials. The specification generally runs, "that the bricks shall be the best hard, well-burned grey stock bricks. The cutting contractor, after supplying a few thousands of moderately good *stocks*, introduces a quantity of *place:* the surveyor orders them off the ground; then the special pleading begins: the foreman asseverates in the usual formula that they are what was ordered, then that they are as good, that there are no better to be had, and upon being successfully driven from each position, begins to select the best specimens from the last lot, dramatically inviting the surveyor's admiration of the peculiar beauties of each and special fitness for each particular duty. But notwithstanding all his ingenuity, the fact remains the same and cannot be changed by any amount of argument.

Now this is the real point in the case: the vitrified stoneware potters produce an article which is fully equal to its duty, which the public fully appreciate, and which commands a certain value in the market: the earthenware potters offer one at 10 per cent. less cost, using the same arguments as those just cited in the case of place-bricks. If the public with their eyes fully opened to the fact say we will have the inferior article at the lower price, we will drink out of a red pipkin when we can get china tea-cups, why there will be no difficulty whatever in gratifying their tastes; only they must be prepared for one thing, viz. the decline and fall of the superior manufacture. The vitrifiers will very soon turn their attention to pipkins, if pipkins are to be the order of the day; and precisely the same result will follow as in the Sheffield and Birmingham, and indeed all the staple manufactures. Pipes are now at the turning-point in their career: the downward course once commenced, the bottom will soon be reached.

We would do no ill to the Aylesford potters, but we should not do our duty if in this case we did not urge the importance of using the best rather than even the "good enough."

RAILING AGAINST RAILING.

I HAVE often observed, in numerous instances about town, that iron railings are applied in an obtrusive manner; obstructing public convenience without answering any useful purpose. It was the more satisfactory, therefore, to find that the pedestal of Peel's statue, as a first instance, was to be left unencumbered.

The only legitimate and proper purpose of an iron railing, in such cases, is to protect the object it surrounds or fences off; and, if not so required, it becomes an intrusion on the space, and an obstruction of the public convenience, as well as an encumbrance to the building or monument it is attached to. One of the most provoking instances of this kind is the outer railing to the enclosure in front of the British Museum. The pallisading is in itself so formidable, and being set in a plain massive curb of granite, it might surely be deemed sufficient to take care of itself, and to be peculiarly exempt from liability to casual injury. Yet we find an outer rail, and posts topped with little nondescript figures planted round, to keep off the *turba mundi*, requiring the passers-by to make a long circuit at the corner of Montague-street. No doubt the ground thus rendered sacred was part of that purchased by the trustees; but then it was bought with public money; and, if not required for the special object, as is evident by the fact, the public are entitled to use it for the convenience of the thoroughfare. Therefore, the whole of the space outside the enclosure ought at once to be given up, and thrown into the public way, which will then be but of moderate width.

A similar nuisance formerly existed at the north-west corner of the Bank of England; and, as the ground there belonged to a corporate body, and not to the public, it was not so assailable; but common sense and good feeling prevailed over the "dog in the manger" principle: thus much gain has accrued to the public, and no loss to the Bank. The Wellington statue in front of the Royal Exchange has less need, if possible, than that of Sir R. Peel for a protective enclosure (they both abjured "protection"). The pedestal is remarkable for its boldness;—no delicate mouldings, no decoration, and next to no inscription; in short, nothing liable to casual injury. Its position also is the more secure than the other, by being remote from the carriageway: still it has not been exempted from the usual iron railing.

The enclosure of the statue of William IV. at the end of King William-street, is a striking instance of bad taste in this respect; and its intrusiveness is the more palpable from the importance and value of every foot of space at that great confluence of public traffic. The statue, with the whole of its substructure, is of that dreadnought material, granite, forming altogether a picturesque group; but the general outline, and the repose and grace of the composition, are sadly marred by those impertinent stone posts and iron railings by which it is enclosed. Admitted that on some occasions the populace will, in spite of police regulations, avail themselves of any means at hand to get an elevated position for a view: still it will be better, as less liable to accidents, to let them make use of the graduations of the pedestal, than to be stuck about on the posts and pallisading. Many more examples might be adduced of the like obstructions and encumbrances; but I am fearful of appearing to amplify what some persons may deem a small subject. This is an age of emancipation, and for removal of useless barriers; and I am anxious to obtain for public statues and monuments the benefit of the same good movements, more especially as there is a promise of further accessions, that they may be saved from the usual impediment. To this end I invoke the aid of the great censor of nuisances, the *Builder*. CIVIS.

PUTNEY-BRIDGE.

As a shareholder in Putney and Fulham Bridge, I trust you will allow me to say a few words in reply to the article contained in your paper of the 7th inst.

The bridge was originally built in the year 1728, by commissioners appointed by Act of Parliament, and by them made over to the shareholders, in thirty shares of 1,000*l.* each: a large sum was also paid to the then Bishop of London and Duchess of Marlborough, for their interest in the ferry; and the bishop and his family still retain the privilege of passing over free: provision was also made for the watermen, who receive an annuity of 30*l.* a year.

Although an old bridge (in fact, the oldest bridge on the Thames,—Westminster-bridge having been completed in 1749, and Blackfriars in 1769), it has at all times been well and properly repaired, and, while Westminster and Blackfriars are tottering to their fall, is now in as sound and substantial a condition as when first erected. This statement relies not only on my authority, but on that of a Government inspector, who, a few years since, was sent down to survey and report as to the condition of the bridge.

The centre lock or opening is 30 feet wide: there are also four other locks of 26 feet in width.

With regard to the payment of double toll on Sundays, that is expressly provided by the Act, and, although the shareholders generally would gladly see this tax on the public reduced to the same amount as on other days, yet they are unable, to the prejudice of infant shareholders, or others incapable of consenting, of making this desirable alteration.

With respect to a new bridge company, the shareholders have expressed their readiness to come to terms: a prospectus was issued, but as shares were not taken by the public the matter has dropped.

The erection parallel to the present bridge is strictly an aqueduct, which it was proposed should be taken through the bed of the river.

One thing may be said in favour of the committee of management, viz. that their services are gratuitous, and that the working expenses of the Board are "nil." The bridge is freehold property, and gives votes both for Middlesex and Surrey.

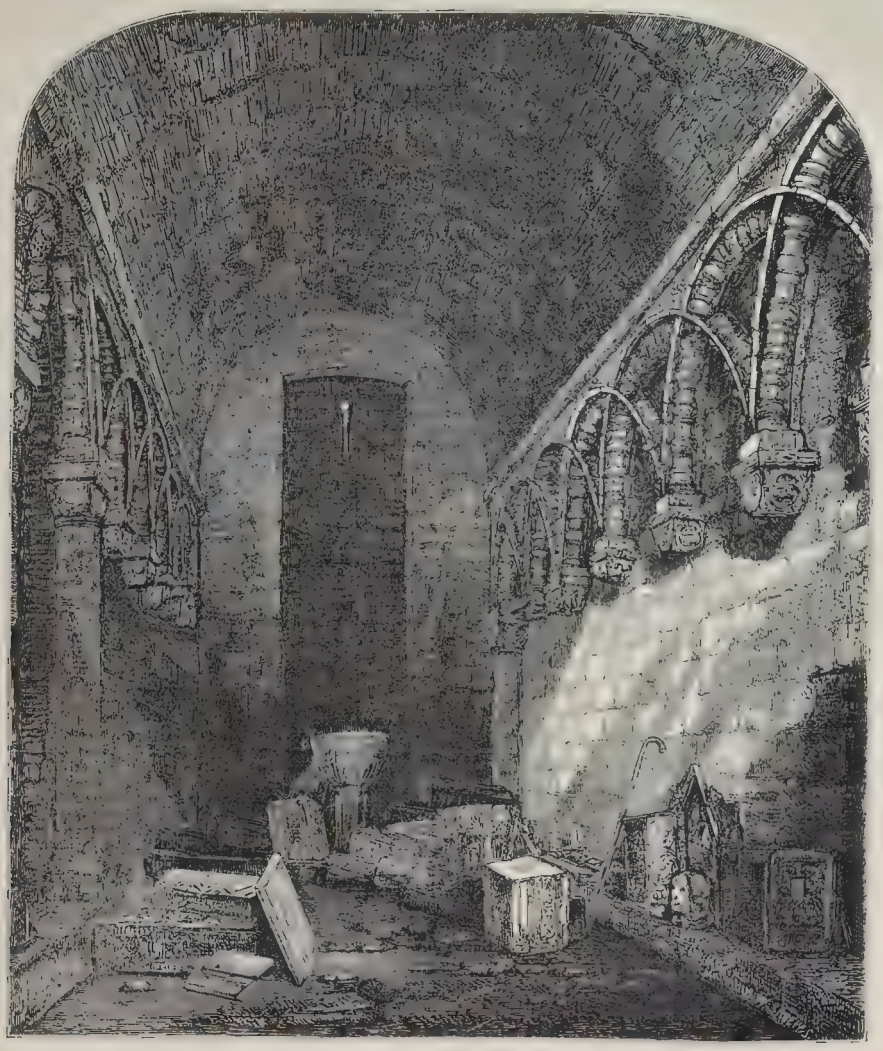
The City corporation may be to blame for allowing an additional obstruction to the river; and, although the shareholders have every wish to forward the interest of the public, yet with their hands tied they can do nothing; and we can only hope that Government, having settled the Eastern question, will now turn its attention to public improvements. J. F. WADMORE.

THE ORIENTAL STRANGERS' LONDON HOME.

THE contracts for the erection of the charitable but self-supporting institution under this name, at Limehouse, the first stone of which was laid by H.R.H. the Prince Consort, on Saturday before last, have been taken by Messrs. Piper, of Bishopsgate, at 7,649*l.* Mr. C. L. Bracebridge is the architect. The building will be capable of accommodating 230 inmates, with apartments for the superintendent, a hospital, registry, shipping, and secretary's offices, and when furnished throughout, including lighting, warming, hot and cold baths and lavatories, will cost nearly 8,000*l.* besides 1,250*l.* paid for the freehold of the site, which is close to the junction of the East and West India Dock roads, and in the immediate vicinity of Limehouse Church. The object of the directors is to offer to all Oriental strangers who visit England a comfortable and respectable lodging, with wholesome food, at a cost which it is presumed they can afford and which shall render the institution self-supporting. Arrangements will also be made for taking charge of their money and other property, when desired, for making remittances to their families and friends, tendering them advice, and affording them information, protecting them from imposition, procuring them employment in vessels, and providing them with instruction in the English language. Nearly 4,000*l.* have been subscribed towards the institution, including a gift of 500*l.* by the Maharajah Dhuleep Singh, and contributions amounting to 100*l.* by other natives of India, 200*l.* by the East-India Company, 100 guineas each from Messrs. H. and R. Green, &c. The Maharajah, and the young princess of Coorg, were present at the laying of the foundation-stone.

INSUFFICIENT SCAFFOLDS.

TARRANT *v.* WEBB.



IN the Court of Common Pleas, at Westminster, on the 3rd inst. this case was tried. The defendant is a house decorator and painter, and in October last he was employed to do some work in the interior of the Carlton Club-house. For the purpose of performing his contract, a scaffold was erected (according to the case of the plaintiff) under the defendant's directions, in the hall of that building. The plaintiff, who was employed on the same work with several other men, mounted this scaffold on the 4th of October last: a portion of it gave way, and he was precipitated to the ground, and seriously injured, and he now sought to recover damages from the defendant, who as he alleged, had built the scaffold in an unsafe and insufficient manner.

The defence was, that even if Mr. Webb had erected the scaffold, he was not liable for any accident which might happen to the plaintiff, who, if he saw that the structure was faulty, need not have gone on it.

The jury eventually found a verdict for the plaintiff —damages, 25*l.*

THE NEW NATIONAL GALLERY.—On the 5th inst. the Chancellor of the Exchequer brought into the House of Commons a Bill to provide a site for a new National Gallery.

ST. ALBAN'S ABBEY CHURCH: PASSAGE TO THE CHAPTER-HOUSE.—(*See p.* 325, *ante.*)

PROVINCIAL NEWS.

Headington-hill (*Oxford*).—The residence on Headington-hill, once occupied by the late Mr. James Morrell, sen. has recently been pulled down to the ground, and a new mansion is about to be erected there, from the designs of Mr. Stone, architect. On Thursday in last week the foundation-stone was laid by Mrs. Morrell, wife of the present proprietor. After the ceremony, which was conducted with free masonic observances and a Sax-horn band, Mr. Morrell entertained the workmen with a substantial dinner and half-a-crown each, to commemorate the occasion.

Portsea.—The new school-rooms of the Portsea free or ragged schools are now completed, and, on Tuesday before last, were publicly opened. The building is situate in Richmond-row, Portsea, on a piece of ground the gift of the Ordnance authorities, and is provided with rooms sufficiently capacious, according to the *Portsmouth Times*, to afford accommodation for the education of as great a number of children as the funds of the institution will support for some time to come. The cost of the building has been 950*l*.

Winchester.—The improvements in the barracks here are progressing. The erection of the clock and cupola, in the centre of the west front, is nearly completed, and, says the *Hampshire Advertiser*, "is a measure in accordance with the original plan of Sir Christopher Wren, which, if our memory serves us rightly, included the erection of a dome in the centre of the western front, and two smaller ones at the wings."

Evesham.—The approaches of the new bridge on the Bengeworth side are very nearly completed. In the centre of the parapet, facing both to the river and the roadway, four inscription-plates have been let into the stonework. One ascribes the erection to the exertions and the public spirit of Mr. H. Workman, mayor, and states that the cost was defrayed partly by voluntary subscriptions, partly by the trustees of the adjoining turnpike-roads, and the remainder by rates. One of the other plates contains the names of Mr. James Samuel, engineer, and Mr. James Taylor, contractor. The plates were cast at Messrs. Hardy and Padmore's ironfoundry, Worcester.

Bath.—Although it was found impossible to complete the erection of the hot water fountain at the end of Bath-street on the day appointed for the celebration of peace, it was determined, says the local *Chronicle*, that its formal inauguration should form part of the celebrations of the occasion. Accordingly, arrangements were made for permitting the water from the street mains to play through the fountain, and thus a new feature of interest was added to the day's proceedings.

Birmingham.—New schools are to be erected in Great Colmore-street. It is proposed to expend 1,500*l*. in order to provide accommodation for 500 children; or, if it can be raised, 1,800*l*. for 750, by the addition of a second floor.

Liverpool.—The new concert-room in St. George's Hall is now almost finished, and was to be opened, according to the *Journal*, on Wednesday in the present week. The hall is circular, with the orchestra in the middle of its south side, the floor being a level area in the centre, with a rise towards the periphery of the circle. The whole of this portion of the hall is laid out in rows of benches. A light gallery, supported on sculptured caryatides, sixteen in number, runs round the walls from one side of the orchestra to the other. This gallery is divided into nave-like compartments, of interlacing segments, fifteen in number, with the caryatides placed under the points of junction. In front these compartments present to view an ornamented panelling of white and gold on a ground of vermillion. In the centre of the ceiling is a shaded cupola light of obscured and coloured glass, and from this depends a gas lustre from the establishment of Mr. Ostler, of Birmingham. In the orchestra, composite columns, carved, fluted, and in gold decoration, are placed at each side and along the back of the platform, the intervals between the upper portions of which are filled in with mirrors. The walls of this saloon are divided into ornamented compartments, styles and mounters of fretted gold work, the panels being imitations of elm-root, shaded off with cool-toned fieldings of satinwood, interspersed with beadings of gold, a similar style of ornamentation being carried up into the ceiling. The caryatides are white, with slight gold ornaments introduced into the draperies. The hall is seated for 900 individuals, but additional seating can be introduced to accommodate about 200 more.

Stockport.—A new grammar-school is to be erected on a site near the workhouse, at Shawheath from plans furnished by Mr. Bowman, of Manchester, architect.

CHURCH-BUILDING NEWS.

Grantham.—The works of the cemetery here are progressing in accordance with a design furnished by Mr. E. Browning, of Stamford. The chapel is in the Gothic style, having a tower and spire 100 feet in height: the whole is to be completed in five months, at a cost of 1,350*l*. The Ancaster stone, worked by Mr. Wilson, is to be used.

Littleport (*Suffolk*).—Littleport Church is being considerably enlarged, by the addition of a new nave and aisle on the north side, at the sole expense of the Rev. E. B. Sparke, the vicar. The expense will be above 2,000*l*.

Bromsgrove.—The consecration of Holy Trinity Chapel, Bromsgrove, took place on Friday in last week. The structure is in the Early English style, and was erected from the designs of Mr. Day, of Worcester, architect, by Mr. Robinson, of Redditch, builder. A school has also been erected in close contiguity to the church.

Taunton.—At a preliminary local meeting to consider as to the restoration of the Tower of St. Mary Magdalene, it has been resolved that Mr. Carver and Mr. Pollard, architects, and Mr. Herniman, builder, should thoroughly survey the tower in its present condition, and ascertain the amount that would be wanted to put it in a good state of repair. They were also requested to draw up a document, to be laid before the churchwardens, who would afterwards bring it before a meeting of the parishioners.

Bidston.—The church of Bidston, now drawing to completion, will be opened on 26th inst by the Bishop of Chester. The architects for the restoration are Messrs. *J. W. and J. Hay*; and the builder, Mr. H. Fisher.

Altrincham.—The foundation-stone of a Wesleyan Methodist Chapel was laid on Wednesday in last week, at Bowdon, fronting Stamford-road, not far from the parish church. 1,000*l*. have been subscribed for the purpose by the members of this body in the neighbourhood, 400*l*. of which were given by the Misses Wood. Mr. Peter Wood, M.D. of Southport, laid the stone. The building is expected to cost, including land, 1,700*l*. The architect is Mr. James Simpson, of Leeds; and the contractor, who engages to have the building ready by March 1, 1857, is Mr. Penk, of Manchester. The style of the building is Gothic. There will be seats for 300 persons, eighty free.

Birmingham.—The new church of St. Matthias is quadrangular in plan, and consists of nave, with north and south aisles, chancel, north and south chantries, and sacristy. The church is without galleries. The style adopted is that of the Middle Pointed period, and the material is common brick, with Bath stone dressings, from the quarries of Messrs. Raudall and Saunders. The church will accommodate 1,151 adults, 741 for the poor. The nave is 78 feet long by 25 feet 8 inches wide: it is separated from the aisles by an arcade of five bays, with arches springing from octagonal shafts, with moulded caps, supporting a clerestory, perforated with traceried windows, each divided into two lights. The west end of the nave has a large window of four lights, with flowing tracery. This window it is hoped may be filled with stained glass. The chancel, which is 30 feet deep by 25 feet 8 inches wide, has also a four-light traceried window, arranged for figure subjects similar to the west window. The reredos extends across the entire width of the chancel, and is divided by stone columns, with moulded caps and bases, into seven compartments. The floor of the chancel and the aisle floors of the church are laid with the ordinary blue and red quarries, designed by the architect in a series of crosses and croslets, according to the space to be covered. The whole of the pews are of uniform character, with plain square standard ends, and open. The roof timbers are all exposed, and, together with the whole of the woodwork throughout the church, are stained and varnished. The church was built by Mr. James Wilson, of Handsworth, from the designs and under the superintendence of Mr. James L. Pedley, of this town, architect.

Ulverstone.—The estimated cost of the new church at Pennybridge is 750*l*.; and the architect is Mr. M. Thompson, of Kendal. The farmers of Egton-cum-Newland, have given a "boon leading" of stones to the proposed site: about 160 loads were led. The foundation-stone was to be laid in the present week.

Westnewton.—The *Carlisle Journal* states, that the foundation-stone of a new church was to be laid here on 11th instant, by the Freemasons of Wigton and others.

North Shields.—The foundation-stone of the Wesleyan Reformers' New Chapel, in Howard-street, North Shields, was laid on Thursday in week before last. The chapel is to be in the Italian style, and built of stone, to contain 800 sittings: it will be heated with hot water. The front will look into Howard-street, and a large school-room, to be erected behind, will face Norfolk-street. Mr. John Green, of Newcastle, is the architect; and Messrs. J. and M. Robson, of North Shields, are the builders.

Glasgow.—The new church recently completed in Berkley-street, from designs by Mr. Burnet, has been glazed throughout with stained glass. The large front, clerestory, and nave windows being of tinted quarry glass, leaded, with outlined and yellow stained diaper ornaments. The lower front windows are similarly worked, but with the additional introduction of coloured ornamental medallions, also ornamental tracery openings. The large pulpit window is of rich geometrical design on a tinted ground, varied throughout the several lights both in detail and colour. The peculiar nature of the glass employed produces a diffusion of light throughout the building, counteracting any glare which might otherwise have existed. The whole of the work was supplied by Messrs. Tower and Arrol, of Glasgow, and designed and executed by Messrs. Pickington, of St. Helen's.

Perth.—St. John's Roman Catholic Church, Melville-street, Perth, has been re-opened. The entrance to the church is by the tower on the south side, the first division of which is only built. the roof, though temporary, is pointed and slated, and surmounted by a cross. The addition to the church, which is in the Decorated style of Gothic architecture, from designs furnished by Mr. Heiton, jun. of Perth, renders it capable of accommodating nearly double the number it could formerly contain. Its length, which before was 68 feet, is now 103 feet, by 40 feet in breadth. The height of the new portion, which is provided with an open roof, is 65 feet. In the front is a decorated window, 25 feet high, and filled with tracery, above which the gable is pierced by a small window, and its apex crowned by a stone cross. The altar, which is of white Carrara marble, stands in a circular recess, having a vaulted roof, decorated with moulded ribs, tracery, and bosses of Rosso-antico marble, and supported on columns of the same, the capitals of which are in white and gold, against a wall composed of slabs of Sienna marble. The altar is ornamented with burnished gold work, mouldings, and pinnacles, the centre compartment with angels in adoration around the cross. Behind the altar is a painting of the death of the Madonna, brought from Italy. The sacristy on the south side is 22 feet long and 16 feet high, having an open roof. On the north side is likewise a sacristy, besides other apartments connected with the church.

A POTTER'S DEVICE: MAN IS CLAY.—At the Branksea Pottery and Clay Company's premises, on the "Rejoicing Night," the device exhibited showed a drain-pipe within a ribbon inscribed "The Branksea Pipe of Peace," with a wheatsheaf below it, and this motto:—"May we never want for a Pipe nor a Drain!" The joke was at any rate *transparent*.

REGULATIONS UNDER METROPOLITAN BUILDING ACT.

METROPOLITAN BOARD OF WORKS.

AT a meeting of the Board, held on the 6th inst. the following regulations were determined on:—

"That an order be passed directing that all builders or other persons who may be desirous of erecting any chimney-shaft of a steam-engine, brewery, distillery, or manufactory, the same being buildings to which the rules of the Metropolitan Building Act, 1855, are inapplicable, shall, before commencing any such building, make an application to this Board, requesting their approval thereof, setting out a plan of the proposed building, and such other necessary particulars as may be required by the Board.

That the following rules and regulations with respect to applications to the Board, under the Metropolitan Building Act, and the 143rd section of the Metropolis Local Management Act, be adopted, and that they be printed and issued to the public.

All applications must be made in writing on foolscap paper, setting forth the nature of the building, work, or other matter, the situation and district in which the same is to be built, and describing all necessary particulars as to the proposed mode of construction, stating under which section of the Act the sanction is sought: to be accompanied by plans and sections drawn to a scale of one-eighth of an inch to a foot (when practicable), with dimensions and thicknesses figured thereon, together with a block plan to a smaller scale, showing the situation of the building with reference to adjoining buildings, and to the ground of any adjoining owner. In the event of the sanction of the Board being granted, duplicate drawings or tracings must be supplied by the applicant for enrolment in the office of the Board, and for transmission to the district surveyor for his guidance.

Applications that are not received at the office of the Metropolitan Board of Works (No. 1, Greek-street, Soho), at least three clear days before the next meeting of the Board, cannot be entertained at that meeting.

That the following fees be demanded and received by every district surveyor under the Metropolitan Building Act, 1855, who shall perform any of the services hereinafter enumerated, the same being special services required to be performed under the first part of the Metropolitan Building Act, 1855, for which no fee is specified in the first part of the second schedule to that Act; viz.:—

For the supervision of Furnaces and Chimney-shafts.			
For every furnace and chimney-shaft belonging thereto, not exceeding 75 feet in height	£1	10	0
Not exceeding 100 feet	2	0	0
For every 10 feet in addition, up to 150 feet	0	2	6
For every 10 feet in addition, above 150 feet	0	5	0"

It was further determined;—

That the committee be authorised to submit a case for the opinion of counsel as to the extent of the powers of this Board under sec. 49, Metropolitan Building Act, with respect to altering the fees payable to district surveyors in respect of the matters specified in the second schedule to the Act.

THE THEATRE AND MUSIC.

The Royal Italian Opera House.—Madame Ristori, the Italian tragedian, now acting at the Lyceum on off nights, and for whom London is indebted to Mr. Gye, is a wonderful artist, and should be studied by other artists. With a full recollection of Rachel, we are much disposed to consider her the greatest actress now living, uniting, as she does, to the power and energy and modulated elocution of the great French actress, an amount of tenderness not possessed by her. Madame Ristori's personation of "Medea" is a study for painters and sculptors, as well as a delight for the lovers of dramatic power in its highest development. Mr. Gye's arrangements for the erection of a new opera house are progressing. He hesitates, we believe, between the old site, which is offered to him on fair terms, and one farther west.

A Model.—It may be useful to mention, that a very elaborate model of a theatre, prepared, we believe, for King George IV. has been deposited in the Architectural Museum, Canon-row, Westminster, and deserves examination.

The Surrey Theatre.—Messrs. Beale and Co. have opened the Surrey Theatre with a very good Italian company, for the performance of operas. "Norma" and "Lucrezia Borgia" have been well represented. Every well-meant endeavour to provide good music for the multitude should have support.

Young Musicians.—The performances of the Brousil family at the Gallery of Illustration, in Regent-street, are very remarkable. It consists of six children, ranging from six years old to seventeen, and they all display surprising skill and taste.

PROPOSED MEMORIAL CHURCH AT CONSTANTINOPLE.

IT may serve as an assurance to several correspondents to mention that the committee entrusted with the duty of giving effect to the resolutions of the public meeting, held April 28, 1856, under the presidency of H.R.H. the Duke of Cambridge, have invited architects to send in designs for the Memorial Church, which it was then determined to erect at Constantinople. The competition will be unlimited and anonymous. The style to be adopted in the designs must be a modification, to suit the climate, of the recognised Ecclesiastical Architecture of Western Europe, known as "Pointed," or "Gothic," and the neglect on the part of any architect of this provision will absolutely exclude from competition.

The church must be of sufficient capacity to hold without galleries a congregation of not fewer than 700 persons, while the cost must not exceed 20,000*l.* a sum sufficient in the hands of an able architect to ensure the monumental character of the structure.

In order to ensure competence and impartiality in the adjudication, the committee have entrusted the selection of the successful designs to the following gentlemen;—The Right Rev. the Lord Bishop of Ripon; Sir Charles Anderson, bart.; the Very Rev. the Dean of Ely; the Rev. Professor Willis; and A. J. B. Beresford Hope, esq.

The judges will be entitled to award a first prize of 100*l.* and a second and third prize of 70*l.* and 50*l.* or in case of equality, two second prizes of 60*l.* each. The design to which the first prize is adjudicated will, without some special reason to the contrary, be the one carried out; and the amount of the prize will be ultimately deducted from the architect's commission. After the decision, all the designs will be exhibited.

MASONS' STRIKE AT CARDIFF.

A STRIKE of a very unreasonable, and, indeed, absurd description, has occurred at Cardiff. The workmen, in the course of last month, issued what they call a "Code of Laws," the "3rd proposition" in which is to the effect that no worked stone shall be allowed to be introduced into Cardiff by the employers, except machine-worked chimney-pieces and slate. The "2nd proposition" is to the effect that every workman, whatever his worth or skill, shall be paid alike at a fixed rate of wages, namely, 5s. 6d. a day for "public jobs," and 4s. 6d. for "private jobs." In laying down this "Code," the operative law-makers state that "if the masters require any alteration from this code of laws they must give three months' notice to the men of their intention of seceding from any of these laws at the expiration of the first three months;" and, in order to let the masters see that they were actuated by *equitable* principles, they thus apply the T-square to the other side of the question. "Also, if the men require any alteration in the laws herein mentioned, *they* will give three months' notice of such intention of alteration after the first three months have expired!" The masters of course refused to have the "law" laid down to them under any such equitable codification, and the consequence was, that the law-makers struck work. Just now Cardiff has made a considerable start in the building trades, some new streets being in course of formation. Prudent men would have hesitated ere they checked such a start, especially in a comparatively small town like Cardiff, by creating any disturbance of settled relationships with those whose business it was to provide for the trade's welfare by encouraging capitalists, by moderate charges in their contracts, to continue the expenditure of their money in such a line of improvements. It is only very indiscreet and foolish persons who can imagine that, by immediately taking an undue advantage of such a crisis to lay down restrictive rules that must forthwith raise the cost of the improvements which capitalists seem inclined to go on with, they are likely thus to secure an increased share to themselves of the profits that are going. One of the chief reasons, on the contrary, which the master builders in this case urged for rejecting the "3rd proposition" was, that it is "unwise and impracticable, and moreover would not benefit the workman himself, while it would increase very much the cost of buildings in the town," and hence, of course, put a stop to them till starvation induced the Cardiff masons to be thankful of anything lik a job at all. What would the operative masons of Cardiff think of an attempt of, say for instance, the home-knit stocking-makers of Cardiff (if there be any such) to prevent the introduction of stockings made anywhere else for behoof of the Cardiff masons? Would they not feel that these workers in wool wished to fleece their fellow-workers in stone? Suppose that the Cardiff tanners laid down the like code of laws in regard to the home-made leather of Cardiff,—its blacksmiths and tool-makers the like in respect to home-made tools,—or the home-spun weavers the like as regarded clothing. The absurdity of such pretensions would very speedily become clear to the masons of Cardiff. The master builders, we think, are quite right to resist such pretensions on the part of their workmen, as they seem determined to do; and we hope the resistance will induce the workmen shortly to listen to reason, and indeed to self-interest in the matter. Is it not surprising that they do not see that, by insisting, during a push of business, that the masters shall have all the stone requisite at the moment worked in the town itself, they would compel them to bring in additional hands, who would remain as competitors with themselves for every minor job after the push was past? Or do they desire to cramp or restrict the building operations at Cardiff within the limits of their own individual capabilities? What *would* they they be at?

WAYS AND MEANS FOR ART AND OTHER IMPROVEMENTS.

IN the House of Commons, on the 6th inst. several votes of money were taken for purposes which require a notification in our columns.

On the proposal of a vote of 2,000*l.* for a National Gallery of Portraits of Distinguished Persons, some discussion ensued, and the Chancellor of the Exchequer stated that there would be no necessary connection between this gallery and *the* National Gallery. There were an immense number of historical portraits in this country, owing to the exemption of the people from the effects of war; and the Government hoped that if a gallery of this sort were established, patriotic persons might contribute such portraits to the nation. Copies would also be made by competent artists of others not to be parted with by their owners. The Government wished to begin with a temporary exhibition, voluntarily contributed, in the new building shortly to be opened (at Kensington-gore), in which there would be found room enough for all purposes. Their ultimate object, however, was to form a national collection which would be an honour to the country. Mr. Spooner opposed the vote on not very clear grounds; but it was agreed to by a majority of ninety-seven against twenty-eight.

The next vote was for 10,000*l.* "for expenses of removing the collection at Marlborough House to Gore House." Mr. Wilson said, the collection must soon be removed to make way for the Prince of Wales. Mr. Disraeli, Sir Joseph Paxton, and other members approved of the vote; and Mr. Spooner opposed it. The present partnership between the Government and the Royal Commissioners, he said, ought to be dissolved, and the property got rid of with advantage. His conviction was, that the 150,000*l.* some time since agreed to would yet be seen to grow up to 1,000,000*l.* Mr. Wilson said the present vote had nothing to do with the purchase of the estate. It was intended for the erection of an iron building for the reception of the articles of art which, sooner or later, must be removed from Marlborough House: a more economical arrangement could not have been made. As to the property at Kensington-gore, the Government would have power over the erection of buildings on one-half of it. As regarded Burlington House, no plan had yet been decided on for building on that site. The Royal Society, who in the meantime were to be accommodated in the present building, on giving up their apartments at Somerset House for Government purposes, were willing to open their magnificent collection of portraits at all times free to the public. Colonel Boldero wished the site they were now disposing of (at Kensington-gore) could be devoted to the erection of new barracks, as Lord Portman was demanding the surrender of those in Portman-street. The vote was then agreed to without a division.

A sum of 24,700*l.* was then proposed, to defray the expense of making a new road from Buckingham-gate to Pall-mall, with a foot-bridge over the ornamental water. Lord R. Grosvenor moved that the vote be postponed for six months, with a view to the reconsideration of the St. James's-park improvements by a select committee. Opening a road through the park, with various turnings right and left, would not effect the object in view. His lordship defended the project of a bridge across the water in St. James's-

park. Sir Benjamin Hall was surprised at such a project coming from one of the select committee who voted for the measure to carry out which the present vote was proposed, and against that now advocated. Mr. Tite said all that was wanted was a communication from Belgravia through Pall-mall, and he could not understand why it should not be granted. To part of the plan now proposed he objected. The sudden turn at Marlborough House was inconvenient. They should have a straight road, 40 feet wide, and that would enable them to give the width of 70 feet to Marlborough House. If that were to be done, it would cost only about the odd hundred pounds of the vote. He objected to the pulling down of the German chapel. It was considered by the most distinguished architects of the day as a gem inside, and associated with many historical recollections. There was no necessity at all for interfering with this chapel. Let the entrance to Marlborough House be in Pall-mall, and all the advantages which he proposed could be obtained. His proposition was—"That the road from Pall-mall into St. James's-park be so placed that the necessity for pulling down and rebuilding the German chapel be avoided, and that the 10,000*l.* provided for doing so be omitted in the estimate, thereby reducing the cost of the new road and other works to 14,700*l.*" He believed that by the adoption of his proposition they would be doing justice to themselves, and saving the country from a large and unnecessary expense. Sir J. Paxton did not think that the hon. member for Bath had improved upon the plan of removing the German chapel. Such a plan as that proposed would have the effect of impeding the entrance to St. James's Palace, and creating inconvenience. It was not proposed to destroy the German chapel, but to remove it to some more convenient spot. He thought it would be desirable to postpone the consideration of this question. This was finally done by a majority of 192 to 70 against the present grant of the sum asked for.

GOVERNMENT ILLUMINATIONS.

Is it not strange, that whilst this country supports a Department of Art, in which 27,000 persons are receiving an art education; whilst in the central training school for masters there are upwards of forty men qualifying themselves to receive appointments as drawing-masters, there could be found no man to direct the illuminations of our Government offices,—no artist or architect to design an illumination which should not be a national disgrace, or outstripped by private individuals?

Could anything be more atrocious than the blocking up of the front of the National Gallery with a coating of black boards, and the exhibition upon them of a set of sickly-looking, badly-drawn flags? Is the only use of such a portico in a case of general rejoicing to be blocked up and hidden religiously from our sight?

Had outlines of our public buildings been sent to the office of any good architect, or to a public academy, that designs might be made to suit the character of each building, we might not now have been the jeer of our neighbours for the signal failures in our national illumination. "Oh, John Bull!" said a Frenchman, whilst surveying the Ordnance Office, "when will you make use of your own resources?

A STUDENT.

COMPETITIONS.

Bolton Cemetery.—At a recent meeting of the Bolton Burial Board, it was resolved that from the competition plans submitted, the designs No. 5 and No. 7, furnished by Mr. Charles Holt, architect, should be adopted. No. 5 is an Early Decorated design for a detached chapel, and is to be for the use of the Roman Catholics, and No. 7 an Early English one, for the use of the Episcopalians. A contract has been made by Mr. Robert Burrows, builder, to complete the two for 1,222*l.*

Chesterfield Cemetery.—The competition here has been great, no less than thirty-six plans for the buildings having been sent in: the plans for laying out the burial-ground numbered fifteen. After a comparison of the respective merits of the many designs, the committee decided on accepting those submitted under the motto "Perseverance," which, as was afterwards proved, were furnished by Messrs. Bidlake and Lovatt, of Wolverhampton. The chapels, while they are under one roof, are quite distinct from each other, the entrance to the one being on the south side, to the other on the east. They are exactly the same in size, viz. 34 feet by 18 feet, and the same in accommodation, while an individual character is given to each by adopting the earlier and later periods of the geometric style, the former being that in which the Dissenters' chapel has been designed, the latter that of the Episcopal. The materials to be used in its erection will be stone from the Wingerworth Bole-hill quarries, with dressings of Horton stone, the same classes of material as have been used at the grammar-school and the master's residence at Chesterfield: the roofing will be open timbered, and covered with the Staffordshire bridled tiles: the floors generally will be quarried, those of the pews of wood: the woodwork of the sittings and roof will be stained oak and varnished. The second premium was awarded to Mr. Drury, architect, Lincoln. The committee afterwards turned to the consideration of the best plan for laying out the burial ground, and after examination selected, for execution, the one signed "Pro Salute Publica," which proved to be the work of Mr. F. C. Gillett, of Chesterfield. The plan which was considered second-best was by Mr. Kitching, of Chesterfield.

PROPERTY INJURIOUSLY AFFECTED BY RAILWAYS.

A COMPENSATION CASE.

A JURY case under the Land Clauses Consolidation Act, of considerable importance to railway companies, was tried last week at the Portland Hotel, Greenwich, before Mr. Palmer, the Under Sheriff, and occupied two days. Mr. Browne was counsel for claimant, and Mr. Woollet for the company.

Mr. Penny, of Lewisham, builder, has premises consisting of a house, garden, builder's yard, workshops, stables, and cottage, within about 60 feet from the side of the station there, and he claimed from the South-Western Railway Company the sum of 420*l.* for depreciation in value, and injury done to his leasehold interest for twenty-two years in the said property, by reason of the loss of privacy in his house and garden from being overlooked by the public from the station, which is on an embankment about 20 feet high; by noise occasioned by the passing of trains; by injury to the buildings from vibration caused by passing trains, more particularly the express and goods trains; and by consequent increase in the annual cost of repairs.

Mr. Smith, Mr. Danes, Mr. Kirkham, surveyors, and other witnesses to facts, were examined in support of the claim. Mr. Charles Lee, Mr. Edward Ryde, Mr. Ritchie, surveyors, and Mr. Nicholson, builder, were examined for the company.

The Under Sheriff ruled that noise and depreciation in value were not proper subjects for compensation, but that substantial injury to buildings, and being overlooked, were, and that the property might be in those respects injuriously affected, and he so charged the jury, who gave a verdict for the claimant of one hundred guineas damages.

This case actually raises the question whether all the houses on each side of the Greenwich, Blackwall, and the other railways entering London, on arches and embankments, are not injuriously affected by being overlooked and their privacy destroyed, and whether the owners could not obtain compensation from the respective companies;—a very serious affair.

PROGRESS OF SEWAGE DISINFECTION AND SOLID MANURE AT LEICESTER.

THE Patent Solid Sewage Manure Company have issued a circular giving the following amongst other particulars as to their progress, at Leicester, in disinfecting the town sewage, fixing and precipitating its ammonia, salts, and other fertilizing matters; and condensing the fertilizing ingredients into a solid manure,—all by one continuous operation under covered sheds. The directors of the company state that they have abstained from bringing their undertaking before the public until their Leicester permanent works had been in perfect and regular action for a long period. These works were opened in May, 1855. They have been in operation, day and night, ever since, and without the slightest nuisance, they say, even in the works themselves, on the sewage of a population of 65,000 inhabitants, and the refuse of the manufactories of the borough. The success they maintain has been complete. From eighty to ninety tons of solid sewage matter, it is said, are separated every week from about 95,000 tons of sewage, the liquid portion flowing into the river Soar in a disinfected and inodorous state, so as to be fit even for drinking and other household purposes. The manure is sent out either in the form of bricks or in a dry powder. Above 500 tons have already been taken by agriculturists. Ten tons of the manure are offered, at the cost of carriage and bags only, to the authorities of any town contemplating the adoption of the system, in order that neighbouring farmers may satisfy themselves as to the value of the manure. Plans, drawings, and estimates for the patent works and machinery are furnished professionally by Mr. Thomas Wicksteed, C.E. under whose superintendence the drainage of Leicester has been carried out, and the company's works established. The deep drainage of Leicester was completed and the sewage works in full operation in the summer of 1855; and it appears that the mortality has coincidently diminished from 450 in the quarter ending March, 1855 (or 420 in same quarter of 1854), to 340 in the quarter ending March, 1856,—an improvement doubtless in some degree, at least, attributable to the sanitary works effected in 1855, although the returns generally throughout the country this year have been more than usually favourable to life and health. The only question, perhaps, as to the utility and the permanent practicability of the solid sewage system relates to the influence of the lime used on the fertilizing power of the matters fixed or separated by its means. It is very desirable that this question should at once be decided by some agricultural chemists in whose verdict the public would place confidence.

INAUGURATION OF THE PRINTERS' ALMSHOUSES.

THIS event took place on Wednesday, the 11th inst. and was celebrated by a public breakfast in the grounds of the Institution, at Wood-green, near Hornsey. The Earl of Stanhope, president of the Institution, presided on the occasion, and was supported by the treasurer, Mr. W. Clowes, the trustees, and a large body of stewards, comprising many of the leading London publishers, some of the more eminent of the stationers, and most of the principal master-printers of the metropolis. The company included many foremen and managers from the greater printing establishments, together with the working committee of the printers, by whom and by whose exertions mainly the institution was founded and the building erected. The whole proceeding was, moreover, graced and adorned by the presence of a goodly number of wives and sweethearts, sisters and daughters.

It appeared that although, by the exertions of the operative members of the profession the ground had been obtained and the building erected, the means of providing for the aged or disabled members, for whose benefit the Institution was created, were still wanting, except as to three, and these had been already elected. The day's proceedings will probably have the effect of doubling this number, so handsomely have the masters contributed to the requisite endowment.

After the formal induction of the recipients of the forethought and kindness of their brethren to their respective tenements, and the bodily refreshment of the company (about 200 in all), had been duly effected, the noble President addressed the assembly on the subject of the meeting especially, and generally on the progress printing has made, and in its effects on society at large, by the means it affords of diffusing truthful information, as well as fulfilling its proper office of the handmaid of Literature.

Mr. John Murray, in proposing the health of the Chairman, reminded the company of his Lordship's hereditary claim to the respect of printers, and of all who benefit (and who does not?) by improvements in the art of printing.

Mr. R. Clay acknowledged the complimentary toast to the Master Printers; Mr. Bohn that to the Publishers: Mr. Gough Nichols answered for Literature, and Mr. W. Spottiswoode for the Stewards.

The only personal toast, except that to the Chairman, was to the Treasurer, of whose service to the Institution, and personal worth, Lord Stanhope spoke most heartily, and of which, in acknowledging, Mr. Clowes spoke most modestly.

The only discord throughout (if that may be so called which was most willingly listened to) was the frequent announcement by the secretary of fresh and fresh contributions to the funds of the Institution.

OXFORD ARCHITECTURAL ASSOCIATION.

THE annual meeting was held last week. In their report the committee said,—"The check given by the war to the progress of public works generally has had little, if any, effect on church building, and during the present year many excellent restorations have been carried out, and not a few fine churches built. In Oxford especially, your society has had from time to time to call attention to the successful restorations and enlargements effected in several of the colleges and city churches, by Mr. Scott, Mr. Street, Mr. Buckler, and others. The buildings in the Broad-street, belonging to Exeter College, are now completed. They have been noticed several times, during their progress, with commendation, and now that they are finished, your committee can have no hesitation in pronouncing them superior, in general effect, to everything else that has been erected in Oxford during the year. The old buildings within are being rapidly demolished, and foundations being dug for a very fine building on the east side of the quadrangle, which will contain the rector's lodgings, and will, with the new chapel (about to be erected shortly), complete a new quadrangle. A new feature in Oxford Collegiate architecture—stained glass in the staircase windows—has been employed in the Exeter-buildings, with

excellent effect. This glass (executed by Mr. Lavers, of London), consists of quarries resembling Powell's quarries, but stencilled instead of stamped. The new library at the same college is very nearly finished, and is a most satisfactory work. At Balliol the old chapel has been demolished, and your committee, though they have not seen the drawings, expect a work fully worthy of the distinguished architect employed—Mr. Butterfield. The president's-room in the lower gateway of Magdalen College is in course of restoration, by Mr. Scott. Your committee have also noticed with approbation Mr. Buckler's restoration of the front of Jesus College. But the work of the day in Oxford is, without dispute, the splendid museum now in course of erection in the parks, which your committee in their last noticed as being but then begun."

RECENT PATENTS.

THE following are selected from the lists of specifications of patents recently granted, and published of late in the *Mechanics' Magazine*:—

Wohlgemuth, P. F. The Construction of Bridges. The patentee proposes to construct bridges of pontoon-shaped iron boats. Two or more of these boats may be braced together with diagonal tie-bars. The bottoms of the boats are to be firmly tied together by a circular concave iron frame, keeping under water a number of hollow iron caissons or cylinders, at 50 feet from the surface. One or more piers, 100 feet high, are erected on the platform, and braced together by diagonal tie-bars, forming frames on either side to support the top and sides of piers, themselves being the starting-point of the arches.

Spilsbury, F. G. and F. W. Emerson. Improvements in the Manufacture of Paints and Pigments. Claims.—1. The use of the tungstates of oxides of zinc, calcium, antimony, aluminium, magnesium, barium, and strontium, as paints or pigments. 2. Any combination or mixture of two or more of the aforesaid tungstates. 3. All mixtures or combinations of the above-mentioned tungstates with oxide of lead, in whatever manner produced. 4. All mixtures of the aforesaid tungstates, whether with or without oxide of lead, with the antimonites, antimoniates, arsenites or arseniates of any of the aforesaid bases, when applied to the manufacture of paints or pigments.

Stansbury, C. F. An improved changeable Lock. This invention consists in forming a lock with a number of tumblers so arranged that they can be worked by means of a key with changeable bits, so that when the bolt of the lock is thrown out by a certain arrangement of bits, it can only be thrown back by the same arrangement, and yet admitting of innumerable changes of the relative positions of the bits on the key without requiring a change in the tumblers.

MARTIEN, J. G. Improvements in the Manufacture of Iron and Steel. This invention has for its object the purifying iron when in the liquid state from a blast furnace or from a refinery furnace, by means of atmospheric air, or of steam or vapour of water applied below, so as to rise up amongst and penetrate every part of the metal prior to the congelation, or before such liquid metal is allowed to set, or prior to its being run into a reverberatory furnace in order to its being subjected to puddling.

Burley, Thomas Haley, of Ohio, United States of America. A new Machine for making Dovetails. This invention consists in giving obliquity to the cutting edges of the saws, in combination with inclined fronting-guides or tables on which the pieces to be mortised are to be brought up to the saws, and in arranging the series of chisels with inclined cutting edges over a double inclined cutting bed or table.

Lee, Henry, the younger, of Lambeth, Surrey, contractor, and John Gilbert, of Hackney-road, Middlesex, engineer. Certain Machinery for Mixing the Substances used in the Formation of Concrete and other like Substances. This invention consists in mounting a cylinder or case upon a shaft, and in providing such cylinder or case with an aperture and cover, which forms both the feed and exit passages for the materials. Rotary motion is communicated to the cylinder, and after having been continued a sufficient time the cylinder is stopped with the aperture downwards, the cover is removed, and the concrete runs out. Half a revolution is given to the cylinder, a fresh charge is inserted, the cover placed over the aperture, and the operation repeated.

Coniam, T. T. Improvements in Tiles for Roofing. This invention consists in making tiles with edges turned up on three sides, so as to lock into each other.

Muller, Emile, civil engineer, Joseph Gilardoni, and Xavier Gilardoni, of Rue de Provence, Paris. A grooving and clamping hooked tile, by means of which the entire covering of a roof is tied together. A machine, for the fabrication of such tile, by which it is continuously delivered from the mould through a peculiar system of delivery, applicable to any matter that may be moulded, and a continuous succession of furnaces for its burning. The inventors describe certain improved tiles, so shaped that a recess in one falls over a projection on the other, the whole being afterwards clamped together by means of metallic wires, &c.

Jones, E. G. An improvement in flattening cylinders of sheet glass. This invention consists in flattening such cylinders in a vertical position, simply by the action of the fire, without resting them on any substance which might affect the polish of the surface of the glass. The cylinder is gradually heated in a kiln, and then carried by suitable pincers to a carriage on a tramway, where it is allowed to partially develope itself by the heat of the kiln: it is then pushed along to the front of a flashing furnace, by the heat of which it is brought perfectly flat. It is then detached from the pincers, piled up in a kiln or moveable apparatus, and annealed in the usual way.

Bowron, James, of the Tyne and Tees Glass Works, South Shields. An improvement in the manufacture of glass tiles. Claim—The manufacture of glass tiles by pressing them from fluid glass, instead of first making the glass into sheets and then shaping it.

IMPERFECT STILL.

There is a touching, teaching, though perhaps an untrue, story,—
But 'tis warm with the weird wisdom and sanctity of old,—
How within the Coliseum strayed an old man bent and hoary,
'Mid Titan trunks of orders by Time, the tyrant, fell'd.

Tho' the snows of fourscore winters his heavenward head encumbered,
Like the prophet on Mount Nebo, whose stern lineaments he limned,
On the Sistine vaults Valhalla with saints and seers unnumbered,
His force was unabated, his eager eye undimmed.

'Twas he who at St. Peter's hung on high the daring dome,
That stretches like the firmament above the gazer's ken;
And in many a princely palace in the regal realms of Rome,
Brought down the gods on earth in the likenesses of men.

The softened southern sunset shed a melancholy glory
O'er his features, as in Ghirlandaio's pictures of the blest;
And o'er the Pincian hill heights, on cloud cushions rent and gory,
The day-god lay a-dying along the flaming West.

And while with mute devotion on those shatter'd shafts he pondered,
Those vague and crumbling arches, those thoughts carved out in stone,
A reverent disciple asked the old man why he wandered
Amid the sullen shadows of that fallen fane alone.

The painter-poet turned him as one awaked while dreaming,
And the young man felt a fiercer fire within his bosom burn,
As gazing on his flashing face with faith and fervour beaming,
Buonarotti bow'd his lordly brow and answer'd him,—"*I learn.*"

Be this tale or truth, or fable, it at least one lesson teaches,
And 'twere well if on the table of each heart there were enwrit,
This truth it more than labour'd lore or Pagan precept preaches,
So long is art—the longest life is all too short for it.

JOHN HEBB.

Notices of Books.

VARIORUM.

"THE Action of Water on Lead," by Dr. H. Osborn, of Southampton, has reached a second edition. In this little sixpenny tract, to be had of Sharland, of Southampton, will be found some useful information (though we do not mean to commit ourselves to all that is said), not only as to the action of water on lead, but also on the symptoms produced by poisoning by lead, caution as to the use of lead pipes and cisterns in certain localities, and a mode of detecting the presence of lead in water. Dr. Osborn, if we recollect rightly, was one of those correspondents who addressed us at the time when we first brought this subject under public notice.——"Nomos" is the title of a volume just published by Messrs. Longman and Co. in which an attempt is made to demonstrate a central physical law in nature. The author, whose name is not given, here endeavours to show that "the law of the laboratory" (the expansive power of heat being, more especially, it seems, referred to under this law) must be regarded as a cosmical law. The force of gravity, itself, he conceives, is not sufficient to account for every phenomenon in which it is supposed to be the principal or exclusive agent; and, certainly, the manifest tendency of the planetary orbits, for instance, to *circularity* of route is not explicable by the mere law of gravitative attraction, which manifests its power in elliptical and parabolical routes; but, rather strangely, the present author seems, somewhat inconsistently with himself, to reject a principle of repulsion as co-operative with the principle of attraction in cosmical affairs; whereas the expansive power of heat which he recognises as the great antithesis of the attraction of gravitation is just *a* mode of repulsive force, at least as much so as is gravity a mode of attractive force, the truth being that both terms—attractive and repulsive—imply hypotheses as to the *modus operandi* of the phenomena of aggregation and segregation, or concentration and radiation, of masses and spheres, with which it is unnecessary to entangle one's thoughts at all. It is refreshing, however, to peruse the work of any original thinker in these times of prostrate adhesion to great authorities, however much one may differ from him on various points: differences are often much more interesting, instructive, and suggestive, indeed, than accordances.——"A Natural History of the Animal Kingdom," by W. S. Dallas, F.L.S. is a goodly volume, with numerous illustrations, just issued by Messrs. Orr and Co. of Amen Corner. It apparently comprises one division of their "Circle of the Sciences" completed, and contains a vast amount of interesting knowledge in regard to the habits, structure, and classification of animals, from the lowest forms to the highest,—opening the mind and filling it with wonder and delight, as well as enhancing the interest with which it notes those manifestations of life by which every one is surrounded; from the insect that dances in the sunbeam, to the intelligent animals who in so many instances act the part of faithful slaves to man.——"June; a book for the country in summer time," by Mr. H. T. Stainton (Longman and Co.), may very appropriately be noted here in corelation with the more important work just alluded to. This little volume is one of very light reading, certainly; but slight as its texture may be, it has an odour of natural history and general intelligence, and kind feeling, too, about it, that will make it a pleasant enough summer companion in the country, in one of those little excursions to which we have often urged our own younger readers in the profession, *sketch-book* in hand *at least*, if not with herbarium or entomological case along with it. To give a specimen of the author's quality, let us take a paragraph from "June, in Sussex."

"Let us turn into this meadow," says he, "still gay with the flowers of the marsh marigold (*Caltha palustris*), and wandering on till we come to where it skirts a little wood, repose awhile, and, while listening to the merry songsters of the little thicket, the humming of bees, and the murmur of the little streamlet, let us note the varied vegetation of the grassy bank. Here, the golden broom, with all its rank luxuriance of blossom, seems to challenge us to produce a garden plant more beautiful; there, the bank is blue with speedwell (*Veronica Chamædrys*) a more modest plant, but of which the flower is pleasantly intertwined with our earliest recollections of summer time in the days of our childhood, when the days were far longer than ever they are now, and when the pleasure was to gather a nosegay of wild flowers, little caring what became of them afterwards. Perhaps some can recall those days, and can remember how their older companions, though not sharing in their childish glee, were yet pleased to see them pleased; and will not this reflection, rightly used, lead us to perceive that by being pleased then we were the cause of pleasure to others, and that so it must be now; and that when we enjoy any pleasures given to us, He who gave them is pleased at our enjoyment of them? I have no patience with those who advocate ascetism and gloom: everything not pleasant at the time will be found by experience but a step to greater pleasure afterwards, and hence evil is permitted as a means (why or wherefore we know not, nor should we inquire) of obtaining greater good than could otherwise have been arrived at."

——"Life in the Trenches," another little volume just issued by the same publishers, treats of far different scenes and pursuits. This is one of those interesting "tales of the wars," which the returned hero himself, in times of old, would have narrated, *viva voce*, to auditors "who live at home at ease." Here we have "an En-

gineer's Life in the Trenches," and many little anecdotes of interest in regard to the momentous siege of Sebastopol, or rather of the Russian armies. Some idea of the office of a surveyor under the pressure of cannon-shot may thus be obtained. The author is Major Whitworth Porter, of the Royal Engineers.——"The manufacture of a pin, accompanied by specimens, showing the progress of the manufacture, from the rough metal to the finished article," is the second of those "Illustrations of the Useful Arts," by Mr. Charles Tomlinson, in course of publication, by Messrs. Myers and Co. of Leadenhall-street, the first of which related to the manufacture of a needle. These are exceedingly interesting and instructive little treatises, not the least interesting thing connected with them being the specimens illustrative of the manufacture, affixed to a card, and enclosed with each treatise in a cloth and pasteboard envelope. The present specimens consist of little slips of copper and zinc, the elements of brass, and of brass itself; then of brass wire, soft, rough drawn, fine drawn, &c. and hard and elastic; then straightened and pointed, separated for shafts, headed, silvered, blacked, blued, and fully finished, with long "stobs" for blankets, and Lilliputians for ribbons. The next will trace a piece of calico from the pod to the finished piece.——"A Practical Swiss Guide," by "An Englishman in Switzerland," has been issued by Messrs. Longman and Co. It is brief and handy, and though there is not much descriptive matter in regard to buildings, the volume will be very useful to every tourist in Switzerland, which it penetrates by various routes, and in all directions, giving a clear and apparently correct index, as it goes on, to the more notable features of each locality, with very useful railway tables of the leading routes through France, Belgium, the Rhine, &c.

Miscellanea.

THE CRYSTAL PALACE.—The picture-gallery has been opened, and promises to form a very interesting additional feature. It is not yet, however, in a complete state. The concerts are most successful; the singers were never heard to greater advantage, but to obtain this result the general effect of the building is much interfered with. Those who love good music should not lose the opportunity here afforded them. On Thursday, the 18th, the great waters will be completed, and made to play. We shall have something to say about them.

THE PARIS AGRICULTURAL SHOW.—The taste which has been exhibited in the arrangement of the cattle show in Paris conveys something of a reproach to the managers of our cattle show. "Grassplats, with their velvet verdure, graceful flower-beds, shrubs, fountains, groups of statuary,—all, in fine, that could refresh the sight and shed a charm over the whole place, has been got together. Standing in the gallery, one might fancy one was looking over some fair valley, rich in verdure and fragrant in flowers, while the singing of birds, from aviarics half concealed amid the trees and shrubs, the gushing of the cool waters as they flash in the stray sunbeam that shoots down through the crystal roof, and the occasional lowing of the cattle, complete the illusion." Never was it imagined by those who year after year have contented themselves with the doings in Baker-street, that a cattle show could be made so interesting. The French building was, nevertheless, ill adapted for the purpose, and we are told that several animals have died.

THE SMOKE NUISANCE.—The Smoke Nuisance Abatement Act is to be amended, by including in its provisions glass works and potteries.

ST. ALBAN'S BRANCH RAILWAY TO WATFORD.—It is said that there were nineteen tenders for the construction of this line, the highest being 30,000*l.* and the lowest 23,000*l.* It is to be a single line, and the contractor whose tender was accepted is Mr. Richard Goodison, of Lewisham, Kent.

ART, SCIENCE, AND LITERATURE, IN THE CITY. The Lord Mayor, Salomons, entertained about 200 visitors at the Mansion House, on Wednesday, the 11th, all connected with art, science, or literature. The Royal Society, responded to by Sir Benjamin Brodie; the Civil Engineers, coupled with the names of Mr. Stephenson, Mr. Brunel, and Mr. Gregory; the Architects of England, with the names of Professor Cockerell, Sir C. Barry, and Mr. Tite, M.P.; the Sculptors, with the names of Mr. McDowell and Mr. Bailey; and the Press, responded to by Mr. John Forster, were amongst the toasts. The dinner was exceedingly well managed, and passed off most satisfactorily.

THE ARCHITECTURAL EXHIBITION.—We would make it known that the Exhibition will be opened to the public in the Suffolk-street Galleries on the 17th day of December next, and will remain open till nearly the end of February. All works must be delivered at the Galleries on the 1st or 2nd of December; and none will be received later. Two rooms, as before, will be retained for models, carvings, decorations, specimens of manufactures, and inventions connected with building, and as the committee have ascertained beyond a doubt that most of those who have been exhibitors on former occasions have reaped a substantial advantage—have found it most profitable, and the very best mode of making their productions known, not only to the architects and builders of London, but to those also of the country at large,—they will on future occasions expect all to pay a sum according to the space they occupy.

THE HALF HOLIDAY.—Sir,—The men in the employ of Mr. Glenton, of Blackheath, commenced on Saturday, May 31st, leaving off at twelve o'clock, thus obtaining a good long half-day for recreation. The way we manage it is thus:—The men work half an hour longer five evenings per week, making two and a half hours; the master gives two and a half hours; and they are paid and off the premises by twelve o'clock. We average from 100 to 120 men the year round. All work well; and we find the men study us more by giving them a little privilege as we do.—J. H.

WATERLOO-BRIDGE COMPANY.—At the half-yearly assembly of proprietors held on 5th inst. at the Freemasons' Tavern, it was resolved to contribute the sum of 100 guineas towards a subscription for the purchase of a piece of plate to be presented to Mr. George Powell, their surveyor and chief clerk for the last fifty years. The directors and proprietors are also to subscribe individually towards the same object.

THE IRON TRADE.—Prices have a decided downward tendency. Welsh bars have fallen 10s. per ton in Staffordshire, and a farther decline in bars is talked of. The Thames-street houses have also of late been selling at reduced prices, and at Liverpool also there has been a decline. The American trade has been seriously damaged, as was to be expected, by the past conduct of speculators in this trade. There is a great falling off in orders for America, which are said to have "disappointed every one's expectations;" and this is considered as all "the more strange" that imports into American ports have of late been very greatly on the increase. In Scotland thirty-five furnaces have been out of blast in consequence of the colliers' strike, so that prices have there been better sustained in the meantime. The Belgian Legislature is following the British example of free trade, having reduced the import duty on pig iron from 2*l.* 6s. 6d. down to 18s. 7d. per ton, a reduction of 60*l.* per cent.; and the Representative Chamber, by a large majority, have even "resolved," in the face of the Government, that the iron and coal duties should be entirely abolished.

TAUNTON SCHOOL OF ART.—The inauguration of the Taunton School of Art took place on Monday in last week, in the Public-hall, Bath-place, Taunton, the building set apart for the purposes of the school. The meeting, which was convened by public notice, and presided over by the bailiffs, was numerously attended, especially by the artizan class, who seemed desirous of examining the casts, models, and other apparatus of the school, which were now for the first time publicly examined. Mr. Jones, the honorary secretary, explained the objects and advantages of the school; and Mr. W. F. Elliot delivered an able address on art, which is pretty fully reported in the *Taunton Courier* of 4th inst. together with an address by Mr. J. B. Williamson, the head master, and other proceedings.

GAS.—The price of gas at Ripley has been reduced from 6s. 8d. per 1,000 cubic feet to 5s. 10d. for the current year, after which it is to be further reduced to 5s. in accordance with a request made to the proprietor of the local gas-works, Mr. Crossley, by the gas-consumers of the place.

TENDERS FOR SEWERS.—The following is a list of the tenders for new sewers to be constructed in the parish of Twickenham, according to plans, sections, and specifications, prepared for the board of surveyors of that parish, by Mr. C. Eley, jun.:—

Ellis	£950 0 0
Murray	630 0 0
Baker	620 0 0
Dethick	550 0 0
Adamson	537 0 0
Pound	535 0 0
Yeoman	522 0 0
Gardener	479 0 0
Rowe	475 0 0
Boulter	452 10 0
Thurst	442 0 0
Pope (accepted)	430 0 0
Rogers	419 10 0

ASPHALTE FLOORS.—We observe in your journal of the 7th inst. a communication signed "G. D. Pocklington," stating that asphalte floors "retain the moisture, and consequently destroy the grain." We can assure your readers that if asphalte floors are laid properly, such is not the case. Our maltstores, which are built in a low situation, we laid with asphalte floors several years ago, and upon these we have regularly stored our malt without injury to its condition, or its becoming "slack." To effect this, all persons conversant with malt know how essential dryness is. Our experience in using asphalte floors is, that with proper care, asphalte forms the cheapest, driest, and most durable flooring yet known.

T. PRENTICE AND CO.

TENDERS

For the Baptist Chapel, Newport, Monmouthshire. Mr. R. G. Thomas, architect.—

William Cock, Newport	£2,253 0 0
William Williams, Newport	2,139 0 0
James and Roberts	2,131 0 0
Thomas Richards	2,014 0 0
David Prosser	1,975 0 0
L. B. Moore	1,973 0 0
H. P. Bolt (accepted)	1,903 0 0

TO CORRESPONDENTS.

"*Varnish.*"—Can any of your readers inform me what description of varnish is the most transparent, and at the same time durable and suitable for polishing, and where it can be obtained? A CONSTANT.

"*Stains.*"—A working man wishes to know "of any cheap substance which will remove the marks of mahogany and rosewood stains from the hands, as soap or soda does not answer the purpose."

"R. W."—"T. R."—"J. S." (other builders think very differently).—"T. P."—"Mr. M. (under our mark).—"Mr. F." (ditto).—"The Mason" (ditto).—"F. D."—"Mr. N."—"M. B. and Co."—"O. H."—"W. H." (the water could be usefully applied: consult a practical engineer).—"Z." (will appear).—"J. W. B."—"D. J."—"A Householder."—"H. and B. H."—"Mr. R."—"T. P. Jun."—"G. L. F." (it depends on the wording of the contract. We cannot attempt to advise in private disputes).—"Frank" (declined with thanks).—"R. C."—"W. and B."—"T. G."—"C. F. H."—"J. J. M."—"W. V. P."—"C. C. N."—"W. F. H."—"E. C."—"Sir W. C."—"J. W."—"W. H. S."—"A. P."—"R. S."—"One of the First Ten."—"Mr. B."—"J. N." (we shall be glad to receive the particulars offered).—"W. S."—"C. G." (next week).—"E. L. B."—"C. F."—"A. J. B. H."—"C. and A. G."—"Nemo" (says the "shaft" at Bethlehem Hospital, complained of, has disappeared, and wants to know who pays for putting up and taking down: 5030 to 1, Brompton."—"T. M." (what was the nature of the building tendered for?—"A. L." (the specimen may be had on application).—"Perseverantia" (apply to the artists' colourmen).

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

ADVERTISEMENTS.

APPRENTICE.—A first-rate WRITER has a VACANCY for an APPRENTICE, either in or out-door. A moderate premium required. Apply to D. O. HASWELL, Sign and Glass Writer, 98, Greek-street, Soho-square.

BOROUGH of DORCHESTER, DORSET. CLERK of WORKS WANTED.—The Town Council of Dorchester require the services of a competent CLERK, to take charge of the works of sewerage and water supply about to be commenced in their district. It will be necessary for him to have a practical knowledge of well-sinking and boring, the construction and fixing of steam-engines and pumps, and of masonry generally; and the works connected with laying brick and pipe sewers and water pipes. Candidates are requested to apply for further information to Mr. A. WHITEHEAD, Engineer to the Council, 4, Dix-field, Exeter, and to state the salary they require, before the 1st of JULY next.

Dorchester, June 9, 1856. G. SYMONDS, Town Clerk.

BUILDERS' CLERKS.—WANTED, a well-educated, respectable YOUNG MAN, acquainted with bookkeeping, and of active business habits. Apply by letter, stating age and last occupation, to F. K. Office of "The Builder."

CLERK of WORKS.—WANTED, immediately, an experienced CLERK of WORKS fully competent to perform all the usual duties.—Address, stating terms and enclosing testimonials, to MORGAN and PHIPSON, Architects, 4, Bucklersbury, Strand. No personal application will be attended to.

CLERK of the WORKS for the DUDLEY UNION WORKHOUSE WANTED, a thoroughly competent person in the above capacity, and who will devote his whole time and energies to the due performance of the duties, at the rate of 150*l.* per annum. Written applications, with testimonials, to be addressed to Mr. SHORTHOUSE, Clerk to the Guardians of the Dudley Union.—Dudley, 9th June, 1856.

IN a Builder's Office, WANTED a JUNIOR CLERK, who writes a good hand, and is capable of tracing drawings and checking dimensions.—Address, O P Office of "The Builder."

NOTICE to MASONS and BRICKLAYERS.—CONSTANT WORK for 200 GOOD HANDS, at 4*s.* 6*d.* per day.—Apply to Mr. OWEN LEWIS, Royal Oak, Saint Mary-street, Cardiff. Cardiff, June 2, 1856.

TO CARPENTERS AND SMITHS.

WANTED IMMEDIATELY, in a Builder's Establishment, a CARPENTER, thoroughly acquainted with his business, and capable of taking the management of a workshop in which a considerable number of hands are employed. Some acquaintance with working from plans and setting out work indispensable. An experienced and steady BLACKSMITH, accustomed to jobbing in a building yard, also required.—Apply by letter, prepaid, to B. B. "Merlin" Office, Newport, Monmouthshire.

TO PARENTS AND GUARDIANS.

WANTED, an active LAD as IN-DOOR APPRENTICE to the MATHEMATICAL DRAWING INSTRUMENT MAKER.—Apply to J. TETTMAR, 18, Robert-street, Jubilee-street, Mile-end-road, London.

TO GENERAL FOREMEN.

WANTED, a thoroughly practical FOREMAN, by a Builder (Carpenter by trade).—Address, by letter, with testimonials, A. B. Office of "The Builder."

WANTED, a good DRAUGHTSMAN, who thoroughly understands the various styles and the general routine of an Architect's Office. State last employment, and terms.—Apply, by letter, to Mr FOWLER JONES, Architect, York.

WANTED, immediately, in an Architect's Office, an ASSISTANT, who is conversant with the measurement and prices of works, taking out quantities, and capable of getting out working drawings. Address, stating references, age, and salary required, to G. B. Post-office, Birmingham.

TO BUILDERS' CLERKS.

WANTED, in an Office in the Country, a Respectable Young Man as CLERK. He must be able to keep the books, to set out plans, and attend to the various duties of the office.—Letters, post-paid, stating age, terms, and other particulars, addressed to S. B. Post-office, Northwich, Cheshire.

WANTED, a respectable YOUTH, of good address, under eighteen years of age, to attend in the SHOP in a House in London. He must have a little knowledge of paperhangings.—Apply to Mr. E. A. SMITH, 10, Northumberland-place, Old Kent-road.

TO BUILDERS' CLERKS.

WANTED, a CLERK who thoroughly understands the routine of a builder's office.—Apply to GEORGE TODD, Jun. Builder, Glebe-place, King's-road, Chelsea.

WANTED, by a first-rate Draughtsman, Writer, and Colourist, an ENGAGEMENT, to make finished plans and plans of estates, towns, parishes, railways, docks, frontages, &c. Has for eighteen years executed schemes and projects, in every variety, for the profession and the Government.—Apply, by letter, to R. THEODORE, 4, Trafalgar-square, Charing-cross.

WANTED, by the Advertiser, a SITUATION, in town or country, where he could make himself generally useful. Is well acquainted with the routine of a builder's office; can prepare fair and working drawings, measure up work, and superintend workmen. Address, K. L. O. Office of "The Builder."

TO ARCHITECTS OR BUILDERS.

WANTED, a SITUATION, as CLERK of WORKS, shop Foreman of joiners, or Foreman of Works by a practical man of large experience. Can make working or detail drawings for the various branches. References good; character undeniable.—Add. ess A. B. 37, East street, Walworth.

TO BUILDERS, LEAD AND GLASS MERCHANTS, PLUMBERS, &c.

WANTED, by a thorough practical PLUMBER a SITUATION of a responsible character, where a steady, perse ering, and experienced man's services are required. Has had experience in the wh lesale and retail lead and glass trade. Can furnish good references, if required. Town or country no object. Apply by letter, prepaid, to PLUMBER, Albert and Pinnock, Stat ners &c Hanley, Staffordshire Potteries.

WANTED, a SITUATION as SHOP FOREMAN of JOINERS, with good reference.—Address J. H. B. 84, Upper Ebury-street, Pimlico.

WANTED, by a practical Man, an ENGAGEMENT, as piecework, of ORNAMENTAL PLASTERING WORK or MODELLING, on reasonable terms. Otherwise would undertake an ENGAGEMENT as FOREMAN of PLASTERING WORK, of any classical designs. Satisfactory reference given. Address, W. R. 9, George-place, High-street, Camberwell.

TO PLUMBERS AND OTHERS.

WANTED, by a Young Man, a SITUATION as PLUMBER; has no objection to fill up time in glazing, &c. Address to C. R. 1, Mead's-row, New Kent-road.

WANTED, a SITUATION, by a Young Man who has been much accustomed to LAND and RAILWAY SURVEYING; can take and make out levels with precision and accuracy; is a neat draughtsman, and good accountant. Unexceptionable references from his late employers.—Address, T. T. Office of "The Builder."

TO BUILDERS.

WANTED, by a Person who has had some years' experience in the trade, a SHARE in or the WHOLE of an established BUSINESS.—Address, R. A care of Mr. Trollope, 14, Eastcheap, London.

TO ARCHITECTS.

WANTED, by a respectable Young Man, aged 25, a RE-ENGAGEMENT, either for the office, or to superintend works. Satisfactory references given.—Address, A. B. C. Office of "The Builder."

TO BUILDERS, CONTRACTORS, AND OTHERS.

WANTED, an ENGAGEMENT as STOREKEEPER, TIMEKEEPER, CLERK, or as MAN on where the services of an honest, sober, industrious young man are required. Can produce good testimonials. No objection to the country.—Address, S. C. B. "Gibraltar," Gibraltar-walk, Bethnal-green-road.

TO ARCHITECTS, SURVEYORS, &c.

WANTED, a SITUATION in either of the above Offices, by a Young Man, aged 23 years; is a neat draughtsman, good accountant, and understands the general routine of an office. First-rate reference.—Address, Y. Y. Post-office, Gloucester-lane.

WANTED, a RE-ENGAGEMENT, as SHOP or OUTDOOR FOREMAN, by an active Man, who has just finished a gentleman's mansion in the country under a London architect, by whom he can be most highly recommended. Has also been employed upon church work, under two of the leading ecclesiastical architects of the present day.—Address F. M. N. 17, Ryder's-court, Leicester-s, and 8

N B.—Would have no objection to the country.

WANTED, by a respectable Young Man, a SITUATION as PLUMBER'S LAD UNEX, being used to jobbing plumbing can do painting and glazing. Good reference can be given if required.—Address, J. H. Mr. Wade's Library, High-street Kensington.

WANTED, by a clear, rapid DRAUGHTSMAN, an ENGAGEMENT, at home or abroad. The highest reference given. Terms moderate.—Address, OSWIN, at Mr. Foster's, Bookseller, Dorchester.

TO MASONS AND BUILDERS.

WANTED, by a good DRAUGHTSMAN, who is also competent to manage the Office duties, a RE-ENGAGEMENT, with a firm in either of the above businesses. First-rate references can be given.—Direct W. P. 30, Water-lane Box Office.

TO CIVIL ENGINEERS.

THE Advertiser wishes to place himself for ONE YEAR as PUPIL under the RESIDENCE ENGINEER of a railway in course of construction.—Address, B. A. I. Post-office, Windermere.

TO ARCHITECTS ONLY.—AS CLERK OF WORKS.—WANTED a SITUATION as above by a thoroughly Practical Man. Can give good references.—Address, F. B. C. 45, Munster-square, Regent's-park, London.

TO CARPENTERS AND BUILDERS.

THE Friends of a respectable Youth wish to APPRENTICE him, in-doors, to the above Trades.—Apply to A. Z. Post-office, Overton Hants.

TO ARCHITECTS SURVEYORS, AND BUILDERS.

THE Advertiser, an Architect and Surveyor, requires a SITUATION in either of the above Offices. Salary two guineas per week.—Address, prepaid, "Iota," office of "The Builder."

DOUCEUR, 100*l.* to 150*l.*—The Advertiser, a Young Man, aged 31, an ARCHITECT and first-rate DRAUGHTSMAN, possessing a thorough knowledge of the practical part of building will some knowledge of civil engineering, desires an APPOINTMENT under a RAILWAY COMPANY, or on Government or other large Works, where he would be actively engaged in carrying out the plans of a principal, superintending workmen &c &c. To any gentleman legally procuring the Advertiser permanent employment he will cheerfully pay one or other of the above sums. A moderate salary required, as permanency is the principal object in view.—Address, in the first instance, to X. Y. Z. Office of "The Builder."

N B. The most honourable secrecy may be relied upon.

TO ARCHITECTS AND SURVEYORS.

AN ASSISTANT, well acquainted with the general routine of the office is desirous of a RE-ENGAGEMENT.—Address, G. M. 246, High-street, Shoreditch.

TO BUILDERS AND CONTRACTORS.

A FOREMAN BRICKLAYER is open to an ENGAGEMENT, either in town or country. First-rate reference can be given.—Address, S. G. Mr. Bond, 1, 5, Bishopsgate-street Without.

TO BUILDERS.

A CLERK of WORKS, with the highest testimonials, is open to a RE-ENGAGEMENT.—Address, E. L. 56, Beaumont-street, Marylebone.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Brabilia, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BUILDERS! ARCHITECTS! and MASONS!—MARBLE.—The Italian Marble Company call the particular attention of Builders, Architects, Sculptors, and Masons to their PEDESTAL SLABS, viz.:—

Vein, in blocks of ordinary dimensions, 8*s.* 6*d.* per foot cube.
Sicilian " " 6*s.* 6*d.* "

An inspection of their well-assorted stock is solicited, at "The Depôt," Bridge-wharf, Millbank, adjoining Vauxhall bridge.—Apply to Mr. BAXTER, Wharf Foreman.

WILLIAM W. BONNIN, Secretary.

TO BUILDERS, MASONS, and CONTRACTORS.—OBSERVE!!! the CHEAPEST DEPOT in ENGLAND for MARBLE CHIMNEY-PIECES, of superior quality and workmanship, is the WESTMINSTER MARBLE COMPANY'S PATENT WORKS, Barlow-street, Holywell-street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold Vein and other Chimney-pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited. The Trade supplied with Slabs, &c. &c.

A WORKING FOREMAN WANTED.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, beg notice to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

Lloyd's Marble Wharf, Thames-bank, Pimlico, Adjoining Vauxhall bridge.

ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours

MARBLE and STONE CHIMNEYS.—150 MARBLE CHIMNEYS of various designs and colours, most of them fixed, are now on view at the Cambridge Health Marble Sawing-Mills. The proprietor has again enlarged his workshops, and erected so much improved machinery, so as not only to compete, but is able to manufacture more, and consequently cheaper than any house in the trade.

The Trade supplied.

STONE! STONE! STONE!—To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Scaffold Slab, Granite Paving and Kerb, Guernsey, Caen Rag, Materials, and every other description of stone, at JOHN KNIGHT and SONS, Depôt, Wharf, Mile-end. York tooled paving, 3*s.* 8*d.* per 100 feet; slab for hearths, 4*d.* per foot sup; slab for chimney-pieces, 9*d.* per foot sup; 8 by 3 window-sills, 6*d.* per foot run; 12 by 3 coping, 8*d.* per foot run; box chimnies fancy openings, 8*s.* 6*d.* each. Terms cash on delivery.

ANCASTER STONE.

JOHN WILSON begs to inform Architects, Builders, &c. that using unrivalled additional and powerful MACHINERY into the ancient Ancaster quarries, he can contract to supply large quantities of STONE, fully the equal of any present Ancaster stone (which has been extensively used in the erection of churches, mansions, factories, &c. and has for centuries withstood the test of time), also the great saving of labour in working, are to well known to need much comment.—Address, Mr. JOHN WILSON, Station-road, Grantham.

TO CONTRACTORS AND OTHERS.

YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS SILLS, SINKS, and CHANNELS. Horsehill, Robin Hood, Park Spring, and Gaspy, in Blocks, Headstones, or Slabs; Turfpits, Farnley, Sink, Curbs, Rickstones, Pitchers, and Squares; Cashburn Flags, Flexstone, Newcastle and Bilston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Caen Stone, Bramley Fall, Bath, Hollidstone Hawkes, and other Block Stones. Valentian Slate Slabs, Langor Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble, in Block and Slabs, supplied from the Wharf, Millbank street, City Basin, and Deptford; also direct from the quarries by vessel or rail.—Address, FREEMAN'S WHARF, 27, Millbank street, Westminster.

FREESTONE.—Architects and Others are informed that they can obtain the EASTERTON Freestone in blocks of any portable size, on applying to FRAS. and OCT. N. SIMPSON, Stamford. Specimens may be seen, and information obtained at the Offices of Messrs FINDER, SIMPSON, and SONS, 26, Savile-row, Burlington-gardens, London.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or at Patent Stone Works, Ipswich.

RAWDON-HILL STONE.—Messrs. TRICKETT and PERKIN are prepared to execute orders to any extent for their much-admired building Stone. Depôts, where large stocks are kept: No. 3, Stone-wharf, Great Northern Railway Station, King's-cross; Victoria Stone wharf, Millwall, Poplar. Blocks quarried to suit customers for columns, cornices, landings, steps, lodgers, coal tones, sills, &c. Delivered to any part by vessel or railway truck.

"This stone when better known, must come into extensive use; I should think it exceedingly suitable for the London market."

C. L. DIESSER, F.G.S.

Address, JOHN TRICKETT, Headingley, Leeds, Yorkshire; or, SAMUEL TRICKETT, Victoria wharf, Isle of Dogs, London.

N.B. A large quantity of Foundation Landings for sale.

SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the Nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of hat-tables, chiffoniers, consoles, &c.; baths, lavatories, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 20 and 20, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATES for SALE, by private contract, at prime cost—Builds, Slaters, Stoppers, and the trade generally, are informed that the extensive Stock of Roofing Slates, at Penrhyn Wharf, Bermondsey-wall, Dockhead, must be immediately realised under the directions of the will of the late Mrs. Catherine Brindley, deceased. The sale is now on.
JOSEPH BRINDLEY, Executor.

GREEN SLATE, the produce of the Tyn-y-Weryded Quarries, is acknowledged to be far superior to any hitherto used. Blue and Purple Slate of the first quality.—Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street; or to Mr. W. O. JENNINGS, Pen-y-Groes, near Carnarvon.

WELSH ROOFING-SLATES.—TO BE SOLD, a Cargo about 100 Tons of FESTINIOG SLATES, well assorted.—For particulars, apply to Messrs. WILKINSON and CO. 26, Gresham-street, City.

O. MCCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, White friars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

AYLESFORD POTTERY COMPANY,
BELVEDERE-ROAD, LAMBETH.
MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.
The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—and as they now feel themselves established as Potters, beg to offer their goods to Contractors the Trade &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

ASPHALTE. — THOMAS HARRISON, having completed his works for making by steam-power, is now in a position to execute orders for BLOCK ASPHALTE to any extent, at an hour's notice. Asphalte expressly prepared for barn and granary floors, and every description of agricultural buildings for laying which plain instructions will be forwarded. Estimates given for every variety of Asphalte Pavement, Mastic and other Tanks, Sea Walls, Railway work, &c.—The trade supplied on advantageous terms.—THOMAS HARRISON, Asphalte and Whiting Works, Cambridge-heath Wharf, Hackney; and Sunderland Wharf, Rotherhithe.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1838.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by Steam power, laid down in the best manner or supplied in any quantity. Information for using forwarded with material. Post-office orders or reference in London promptly attended to.—Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Mommouth-chambers, 14, Pall-mall-pl-hill, London
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

Warehouse, No. 1, Wharf, Paddington-basin.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL — Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.
11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent — KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its comendituous properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 89, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKES.
Agents in London, Messrs. GEORGE POTTER and CO. Limemerchants, Purfleet-wharf, Earl-street, Blackfriars, and No. 19, North-wharf-road, Paddington.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality, Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms.—Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 62, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

PORTLAND and ROMAN CEMENTS.
BLYTH, BROTHERS,
16, SOUTH WHARF, PADDINGTON,
AND PLASTER WORKS,
BALDWIN'S PLACE, GRAY'S-INN LANE.

GREY STONE LIME WHARFS,
12, UPPER GROUND-STREET, Blackfriars (Surrey side),
7, NORTH WHARF-ROAD, Paddington.
WILLIAM PEGERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

MEDINA CEMENT CONCRETE BUILDINGS.
This mode of applying cement is suitable for sea groyne, sea wells, and for soldiers' huts, emigrants' dwellings, temporary chu-ches, school-houses, and workmen's cottages, all of which may be built with greater rapidity and economy than with any other materials; good cement and sea beach, or washed gravel stones, only necessary.
A sea groyne 200 feet in length, erected four years since in Sandown Bay, Isle of Wight, is a perfect specimen.
Two concrete models may be seen at FRANCIS' (BROTHERS), Cement Works, Nine Elms, London; and two soldiers' huts have been built by them for the Government, at Shorncliff Barracks, near Sandgate, Kent.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead; whilst the consumption of material is less than for one coat. It dries very fast and hard.
HUBBUCK'S STONE COLOUR BODY PAINT the same as the former, at three-fourths the price.
HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and iron exposed to salt water; neither bil-e water, nor noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages, stamped, Richmond, London, Patent; and when so marked the quality is guaranteed
HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustati n. Timber coated with this Enamel is not attacked by the worm neither do barnacles attach to it.
Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.
OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground or lump into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime. Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote—Office, at Warwick.

CHALK LIME. — New White CHALK LIME, of a very superior quality, per barge, at the Works—in the River, or Canal.—Apply to Mr. JOSEPH MENDAY, Wouldham, near Rochester.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent). STUCCO CEMENT, STUCCO PAINT.—CLARK and BENNOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

CHARLES RICHARDSON, 3 & 6, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY AND KENT BRICKS,
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.
3 & 6 South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—CHARLES NELSON can supply direct from the Works in his own boats to any part of the Thames alongside, in the Docks, River Lee, on any canal, or by rail to any part of the kingdom, large quantities of the above GENUINE HYDRAULIC LIME, now so extensively used.
Quality, Weight, and Measure may at all times be strictly relied on; references in proof of the above can be given.
N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enabled to know exactly what weight of Lime he is paying for.
All orders addressed to the—
LONDON DEPOT, 16, SOUTH WHARF, PADDINGTON,
BLYTH, BROTHERS, SOLE AGENTS,
Will be promptly attended to, and any further information can be obtained from them.
Works, Stockton-field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station in London.—Any further information can be obtained at their Works, Baldwin's-place, Gray's-inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to call over his works, and thoroughly inspect his stock and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pid Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for sabphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 800 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods both Welsh and Newcastle-, Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.
General Office—No. 12, GEORGE-YARD, LOMBARD-STREET.
Letters addressed to Grays Essex, will meet with immediate attention.

BRICKS.—Sydenham, Penge, Beckenham, and Forest-hill.—A large quantity FOR SALE, on advantageous terms.—Apply, Mr. W. ELLIS, Surveyor, 40, Clifton-gardens, Maida-hill.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY
MILLS and PRICE, 5, ADELAIDE-PLACE, London-bridge.

BEST HERTFORDSHIRE MALM SECONDS AND CUTTERS ALWAYS ON HAND.
MILLS AND PRICE, 5, ADELAIDE-PLACE, LONDON-BRIDGE;
AND CROWN WHARF, GREAT SCOTLAND-YARD

HERMITAGE BRICKYARD, North-end, Fulham.—The best description of STOCK BRICKS now ready for sale at this yard. Gentlemen and builders are respectfully invited to inspect the quality of these bricks. Price for cash, 28s. per 1,000.

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane, Dulwich. Price of good stock bricks, 28s. per thousand on the field, for cash.—Application to be made to the Foreman, A. BANHAM, at the Works.

CHEAP WHITE BRICKS, for FACING HOUSES (Beard's Patent).—These bricks are of excellent make and colour, and imperishable from frost, and do not vegetate or become green.—For particulars, address, Patent Brick Works, Rugby, Warwickshire.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS;
WHITE SUFFOLK PERFORATED BRICKS;
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boy to remove the bricks. For full particulars, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

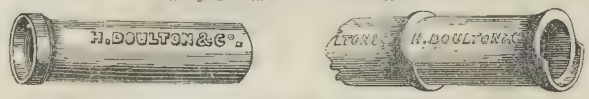
THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented.
HENRY C. MOUNT, Sec.
37, King William Street, City.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles (delivered in agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 281, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

H. and R. HAYWOOD, Brownhills Blue Metallic Tileries, near Burslem, Staffordshire; London Depôt, 15, South Wharf, Paddington, Manufacturers of Improved Plain and Ornamental Roofing, Ridge, and Flooring Tiles, for Churches, &c.; also Metallic Plain and Socket Sewerage Pipes, &c. adapted for Sanitary and Railway purposes. They are extensively used on the London and North Western, Great Western, Trent Valley, North Staffordshire, and other Lines of Rail, and highly approved. Warranted imperishable, and to resist all acids and exhalations.
*** A FIRST-CLASS MEDAL was awarded to H. and R. HAYWOOD, by the Jury of the GREAT EXHIBITION.



GREAT REDUCTION IN PRICE OF DOULTON'S DRAIN-PIPES.

HENRY DOULTON AND CO.

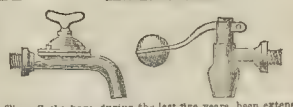
MANUFACTURER OF EVERY KIND OF STONEWARE DRAIN-PIPES, BENDS, JUNCTIONS, &c. &c.

BY PATENTED MACHINERY, AND UPON THE MOST APPROVED PRINCIPLE.



MANUFACTORIES—65, PRINCE'S-STREET, LAMBETH, and BRUNTON'S WHARF POTTERIES, COMMERCIAL-ROAD, LIMEHOUSE.

TERRA-COTTA CHIMNEY-POTS OF VARIOUS PATTERNS AND SIZES. ALSO RED EARTHENWARE DRAIN-PIPES, AT GREATLY REDUCED PRICES.

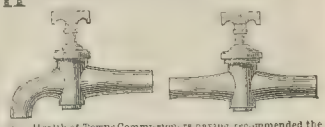
PRIZE MEDAL CLASS 2.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns in the Continents high pressure, varying from 1 to 3 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and perfect in its action, and is cheaper than the common Cocks now in use.

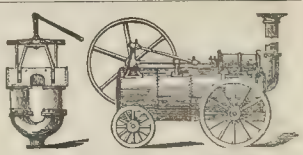


Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT, and SON,

Brass and Iron Founders Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

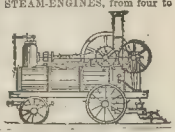


HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Nose and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.



PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready for hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,

Engineers and Contractors, John's-place, Holland-street, Southwark, London.

WARNER'S PATENT VIBRATING STANDARD PUMPS.—PATENT CAST IRON PUMPS,

for the use of farms, cottages, manure-tanks, and wells of a depth not exceeding 30 feet.

Diameter of Barrel.	Length of Barrel.		£ s. d.
2½ in.	short 1 ft. 7 in.	Fitted for lead,	1 10 0
2⅝ „	long 3 3	gutta percha	1 14 0
3 „	ditto 3 6	or cast iron	2 8 0
3½ „	ditto 3 6	flanged pipe,	2 19 0
4 „	ditto 3 6	as required.	3 3 0
2½ „	short, with 15 feet of lead pipe attached, ready for fixing.....		2 14 0
2½ in.	long ditto ditto		3 18 0

The short-barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of cottages and sinks in washhouses with soft water from underground tanks, or in hot forcing and plant houses; they may be fixed, when desired, under the stage.—May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

R. RICHARDS and CO.

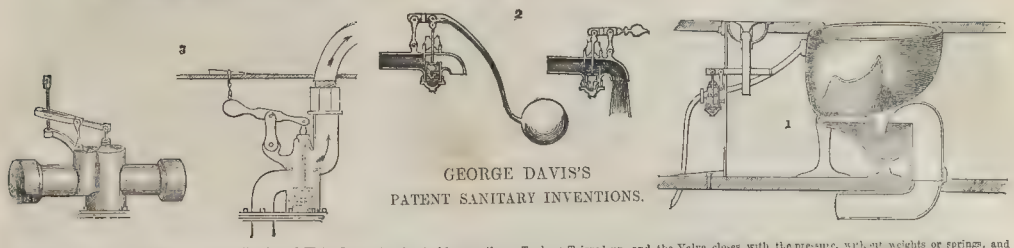
PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 18-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.



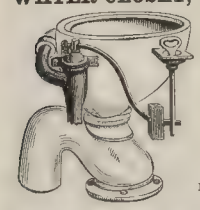
Iron Pails 38s. per doz. painted.
Ditto .... 42s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PARSEY'S REVOLVING STEAM-ENGINES and PUMPS (the accomplishment of circular motion—as steam-engines, are better than reciprocators, and as pumps, being all metal, are equally good for hot or cold liquors; and having no packing, are not liable to choke, and are a vast improvement on pumping and for saving pumps. To be seen at Mr PARSEY'S Depôt, Great Scotland yard.

CONTRACTORS' STEAM-ENGINES.—TO BE LET, on HIRE, or for SALE, several NEW and SECOND-HAND STEAM-ENGINES, of various powers, suitable for contractors' work generally.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, Blackfriars-road, where they may be seen.

TO WATER COMPANIES AND BOARD OF HEALTH COMMISSIONERS.



GEORGE DAVIS'S
PATENT SANITARY INVENTIONS.

G. DAVIS begs particularly to call the attention of Water Companies, &c. to his recently Patented Inventions. The Sanitary Closet and Valve is the most simple and effectual Apparatus for common purposes yet introduced to the public. The advantages it possesses over all others will be evident to every practical person, at first sight. Its superiorities consist in the following desiderata :—The Basin is so constructed, that instead of the water running round the sides of the Trap, it is precipitated into the centre, which flushes the Trap effectually with one half of the water usually required. The Handle of the Closet Apparatus is so arranged, that it cannot be Tied or Tripped up, and the Valve closes with the pressure, without weights or springs, and without concussion. The Ball and Ball Cocks are unequalled for High Pressure, and are perfectly self-closing, without concussion. Hydrants and Sluice Cocks are also manufactured on this Patent Principle, and nothing can be more simple or effectual. The Valve is of Indian Rubber, enclosed in a box so as to prevent wear, and they can be set in motion in one second, in case of fire, and will not hang up or get deranged in any way. When closed, the pressure tends to keep them from leaking, and all the working parts are kept from the water when shut off.

For full Particulars, Prices, &c. apply to the Patentee and Manufacturer,

GEORGE DAVIS, MARLAND-PLACE, SOUTHAMPTON.

WATER-CLOSET, WITH APPARATUS COMPLETE, for 13s. 6d.

DOULTON & WATTS,
LAMBETH POTTERY, LONDON.

DOULTON'S NEW ENAMELLED CLOSET-PAN, REGISTERED,
AND
LAMBERT'S PATENT HIGH-PRESSURE VALVE-COCK,
With Handle, Lever, and Weight, ready for fixing,
Making the most COMPLETE, DURABLE, and EFFICIENT APPARATUS, as well as far the CHEAPEST yet manufactured.

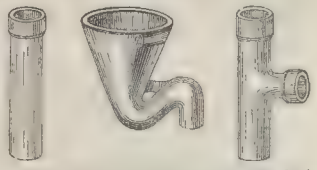
These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, as it is well known that good earthenware, UNGLAZED, is the finest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES



FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 32, Old Fish-street, near St. Paul's, London. Price for Closet and Apparatus complete, from 23s. and perfect action guaranteed.

TO LOCAL BOARDS of HEALTH. SURVEYORS, &c.—The Best and Simplest MACHINERY for CLEANSING CESSPOOLS, DRAINPIPES, &c. including everything that is required, can be obtained from R. BARRETT and SON, Brass and Iron Founders, Beech-street, Barbican, London, who will furnish prices on application.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment,—Falcon Wharf, Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

GROUND FLINT AND CORNISH STONE, UNADULTERATED.
WILCOX & CO.
FLINT MILLS, MILLWALL, POPLAR.

TO STONEWARE POTTERS, BRICK-MAKERS, CONTRACTORS, and OTHERS.—A POTTERY and BRICKWORKS are TO BE DISPOSED OF, on easy terms, near a railway station, and within reach of the large Government works now in progress at Winchester, Hamble, &c. &c. The machinery, buildings, and plant are upon the most improved plan, and adapted for carrying on a large stoneware business, for which the clay is well suited. There is ample space and every requisite for making from four to five million bricks per annum, large sheds for making tiles and red ware; a dwelling-house, stable, &c. &c. The whole in complete order, and now in operation. For particulars, apply to Mr. F. SCHULTZ, S. Heitor, 4, Dyer's-buildings, Holborn, London.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PRIGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

SALES BY AUCTION.

TO IRONFOUNDERS AND OTHERS.

MESSRS. FULLER and HORSEY will SELL by AUCTION, on MONDAY, JUNE 23, 1856, at TWELVE, at the AUCTION MART, Bartholomew-lane, by direction of the Assignees of R. J. Polehin, a Bankrupt, in lots, without reserve, 650 tons REJECTED SHELLS, from 5½ inches to 12 inches, made of mixed cold-blast and Scotch iron, and lying at the Royal Arsenal, Woolwich.—To be viewed seven days prior to the Sale, by orders.—Catalogues may be had of Messrs. ASHLEY, Esq. Solicitor, 7, Old Jewry; at the Mart; and, with cards to view, of Messrs. FULLER and HORSEY, Billiter-street, City.

TO TURPENTINE AND TAR DISTILLERS AND OTHERS.

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on WEDNESDAY, JUNE 25, at ELEVEN, in lots, without reserve, on the PREMISES of the late Mr. Garton, Rotherithe, near the Globe Dock, the PLANT of a TURPENTINE and TAR DISTILLERY, including two copper melting-pans, capable of melting twenty five barrels each; four copper turpentine stills, 500 to 700 gallons, with copper heads; four copper worms and backs, one copper tar still, 60 work, sixteen barrels, with copper head and pewter worm and tub; four cast-iron resin oil-pans, seven cast-iron pans, four-horse power steam-engine and boiler, several rods of brickwork furnace-work and smoke-consuming apparatus, four large lead turpentine and oil cisterns, in wood cases; twenty turpentine punncheons, fourteen iron-bound casks, with brass cocks; scale beams and weights, two horses, two waggons, two carts, harness, various utensils, and a quantity of building materials, in paintings, rafters, &c.—To be viewed on TUESDAY previous to the sale, when catalogues may be had on the Premises, and of Messrs. FULLER and HORSEY, Billiter street, City.

CLAPTON.—Building Materials. Important Sale by Tender.

MESSRS. BROOKS and BEAL are instructed by the Trustees of the London District Freehold Land Society, 79, King William-street, City, to SELL by TENDER, in one lot, the whole of the excellent BUILDING MATERIALS of the house now standing on the Society's Estate at Clapton, facing the Triangle.—Tenders to be delivered at their Offices, 5, Piccadilly, by FOUR o'clock, on THURSDAY, the 19th of JUNE, marked "Tender for Building, Clapton." The Trustees reserve the right of letting one Tender. And further particulars to be had of Mr. DALTON, Surveyor, 23, Lincoln's-inn-fields; or of Messrs. BROOKS and BEAL, 260, Piccadilly. Attendance will be given on the Premises, on the 17th and 18th inst. when conditions of Sale will be produced.

PORTPOOL-LANE. — Valuable Builder's Stock of seasoned Timber, Plant, Implements, and Effects, on the Premises of the late Messrs. Locke and Nesham.

MESSRS. EVERSFIELD and HORNE are instructed by the Executors to SELL by AUCTION, on the PREMISES, Portpool-lane, Gray's-inn-lane, on WEDNESDAY, JUNE 25th, and two following days, at TWELVE for ONE each day, the FIRST PORTION of the valuable STOCK and EFFECTS, which will comprise a large quantity of well-seasoned yellow and white deals and battens, prepared floor-boards and battens, pine plank, thirty loads of timber in the docks, die square timber and quartering, oak sills, dry wainscot and mahogany blocks of Portland stone; stone steps and paving; also, several builder's carts, stone-trucks, timber-carriage; scaffold boards, poles, and putlogs; crab-engines, hoisting-jacks, blocks and falls; ladders, trestles, planks, barrows, pile-driving engines, and monkeys; saw-tackle, a new travelling-crane, the contents of the joiners', plasterers', painters', and smiths' shops; new and old iron, an endless chain, and drum work-benches, and other effects. May be viewed two days previous, and Catalogues had on the Premises, or will be sent post-free, to any parties who will apply to the Auctioneers, 40, Parliament street, or Cornhexchange

STOCK of Messrs. BROWNE and CO. University-street.—The last Sale previous to delivering up the Premises at Midsummer, including Marble Bronzes, Models, Women, a Stained-glass Window, Marble Chimney-pieces, Scagliola Pedestals, &c.

MESSRS. RUSHWORTH and JARVIS beg to announce that the FINAL SALE of the valuable STOCK of Messrs. Browne and Co. will take place at the GALLERIES, 71, Great Russell-street, on MONDAY, JUNE 23rd, and following days, and will include many valuable groups, figures, and busts, in marble; eight marble statues of Italian poets and painters, size of life; statues, groups, &c. in marble and Parian stone, adapted for pleasure grounds and gardens; a few choice bronzes; the specimens of scagliola, in pedestals, brackets, &c.; beautiful marble and pietra dura chimney-pieces; a stained window, stained with great taste, and sculptured by first-rate artists, six groups of figures in wood (life size), and two stands formed of boys and foliage, from Venice; an ancient mosaic table from the baths of Caracalla, a stained glass window, and a great variety of objects of taste and utility, to clear the premises by the 24th inst. May be viewed two days prior, and catalogues had on the Premises, and of Messrs. RUSHWORTH and JARVIS, Sav ile-row, Regent street, and 19, Change-alley, Cornhill.

THE PRIOR-PARK ESTATE, BATH, comprising a noble and spacious stone mansion, with its extensive modern wings, connected by arcades and corridors, lately occupied as the Great Roman Catholic College, with various other Ancillary offices, select-fully situate in one of the most prominent and picturesque parts of the city of Bath, and commanding a grand expanse of magnificent scenery, but secluded in private grounds of surpassing and varied beauty

MESSRS. DANIEL SMITH and SON are commissioned to submit for PUBLIC COMPETITION, at the MART, near the Bank of England, on TUESDAY, the 24th of JUNE, at TWELVE (unless an acceptable offer shall be previously made by private treaty), entire or in a few sub divisions, presenting choice sites for building, the above very important and desirable ESTATE, within and consequently possessing considerable influence in the borough of Bath. It comprises nearly 60 acres, of a ring-fence, and chiefly sound pasture land, finely sheltered and richly wooded, and embodies within its commanding plateau, being 500 feet above the level of the sea, the whole of the above-named Mansion, in the best Bath stone, and in a perfect state, presenting a noble specimen of architecture, with a grand portico to each principal front of lofty Corinthian columns, and unbroken length of communication for a family of rank and fortune, with handsome mahogany and stone staircases, moulded doors, &c. The wings, distinguished as St. Peter's and St. Paul's, comprise the chapels, refectories, lecture-rooms, theatres, studios, refectories, &c. but might be easily removed. There are capital stabling and farm buildings, with entrance lodge and gates, an excellent walled garden, productive pleasure-grounds, with terrace and other walks and rides of unusual variety and extent, the whole abounding with springs of the purest water, and an extensive ceiling fish-tank, known as the Priory; a complete gymnasium, and several neat entrance lodges, an observatory, and very valuable stone quarries.—Descriptive particulars, with plans, may be had 28, each, to admit four persons, at the chief Libraries at Bath; of Messrs. DANGERFIELD and FOSTER, Solicitors, Cook-street, Strand; of Messrs. WARD and PEARSON, Solicitors, Bath; at the Auction Mart, and of Messrs. DANIEL SMITH and SON, Land Agents in Wimpole-street, Parliament will not be held sufficient to treat for a disposal.

TO CABINET-MAKERS, TIMBER-MERCHANTS, BUILDERS, AND OTHERS.

FOR SALE by AUCTION, on the PREMISES, NEW-INN, BROADWAY, Cutler-street, Houndsditch, by Mr. JOSEPH DAW, on MONDAY, the 23rd inst. by order of the Mortgagee, the PREMISES, and Capital PORTION of the STOCK-IN-TRADE of Mr. J. Lovell, which will comprise a large quantity of well-seasoned deals and battens, TEN for ELEVEN o'clock precisely; consisting of large quantities of excellent and well-seasoned Spanish, Cuba, and Honduras mahogany, in fine flitches, planks, and boards; birch, maple, rosewood, walnut and other hardwood planks, dry pine deals and planks (whole and cut), &c. To be viewed two days previous to and on the morning of sale. Catalogues may be had on the Premises, and of Mr. JOSEPH DAW, Land Valuer, Auctioneer, &c. Bermondsey Brickfields, Jamaica-row, Bermondsey.

N.B. No private sales to be let for any other trade.

SALES BY AUCTION.

Freehold Building Land, nine miles from London, in the County of Surrey.

MESSRS. WINSTANLEY are instructed to treat for the SALE of a beautiful and picturesque PLOT of BUILDING GROUND, land-tax redeemed, and free of great tithe, comprising about 33 acres, situate within ten minutes' walk of the Norwood Station. The great facilities afforded by the London and Epsom Railway to this locality, couple it with its proximity to the Crystal Palace, renders this estate particularly eligible for building purposes. The land will be sold either as an entirety or plots suited to the erection of gentlemen's villas. Half the purchase money may remain on mortgage.—For further particulars and terms, apply to Messrs. WINSTANLEY, Pater. osterrow.

JAMAICA TAVERN Jamaica Level, near Mill Pond Bridge, Bermondsey To Building Material Dealers and Others.

MR. PEAKE is favoured with instructions by Messrs. Courtnee and Co. to SELL by AUCTION, upon the PREMISES, on WEDNESDAY, the 18th inst. 1856, at TWELVE o'clock, in lots, the MATERIALS comprised in that well-known ancient place of resort, "The Old Jamaica House" consisting of sound oak brickwork, timber, flooring, wood fittings, &c.; lead gutters, pipes, and flats, stone paving, and a variety of fixtures, fittings, and effects. May be viewed the morning of sale, and catalogues obtained at Mr. PEAKE'S Offices, 44, Tooley-street, Southwark.

45 and 46, LONG-LANE, BERMONDSEY. To Building Material Dealers, and Others.

MR. PEAKE will SELL by AUCTION, upon the PREMISES, on FRIDAY, JUNE 20th, 1856, at TWELVE o'clock, in lots, the MATERIALS comprised in the above brick-built Residences, consisting of stock brickwork, timber, and flooring; large quantity of panelled partitioning, doors, sashes, and frames; lead gutters and pipes; stone paving, with a variety of effects of the usual description.—May be viewed the morning of sale; and catalogues obtained at Mr PEAKE'S Offices, 44, Tooley-street, Southwark.

Valuable Building Ground, cheerfully situate at Hampton, Middlesex.

MR. JOHN DAWSON will SELL by AUCTION, at the MART, on WEDNESDAY, JUNE 18, at TWELVE, in lots, FOUR ACRES of LOT LAND, equal to freehold, desirably situate for building purposes, on the elevated bank, just beyond Rose-hill, on the high road from Hampton to Sunbury. The subsoil is a bright gravel, with delightful water, the view of the Thames and country beyond cheerful and interesting, and about one mile from the railway terminus at Hampton-court.—Particulars, with conditions of sale, may shortly be had of E. J. KENT, Esq. 1, Guildhall-chambers, Solicitor; at the Red Lion Inn, Hampton; at the Auction Mart; and at Mr. JOHN DAWSON'S, Land and Auction offices, Kingston-on-Thames, and Marlborough-chambers, 49, Pall-mall.

500,000 STOCK BRICKS, STARCH GREEN, near HAMMERSMITH.

MR. ALLEN DAVIS is directed by the Executor to SELL by AUCTION, on the PREMISES, Mr Street's Brick-field, Starch Green, in lots, on THURSDAY, 19th JUNE, and FRIDAY, 20th JUNE, 500,000 Stock Bricks, well made, and lying handy for sale; also two handsome cows, a sow in pig, and about 20 head of Spanish and Cochin poultry. May be viewed, and catalogues had on the Premises; at the Travellers' Rest, and Seven Stars, Starch Green; the Victoria, Uxbridge-road; King's Arms, Acton Bottom; Castle, Hammersmith; and of Mr. ALLEN DAVIS, Auctioneer, 11, Old Jewry Chambers, City.

LUDGATE-HILL.—Building Materials of part of the Belle Sauvage Inn.

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on MONDAY, JUNE 30, at TWELVE, in lots, all the valuable BUILDING MATERIALS of Five Houses, workshops, and premises belonging to the Westminster Fire Office Company, forming part of the Belle Sauvage Inn, Ludgate-hill, comprising good sound brickwork, slate slabs, lead gutters, pipes, and flats, cast-iron columns, large plate-glass sashes, doors, floor-boards, shop-fronts, various partitions, large plate-glass skylights, iron girders and columns, large slate slabs, lead gutters, pipes, and flats, cast-iron columns, large plate-glass sashes, doors, floor-boards, shop-fronts, various partitions, large plate-glass skylights, iron girders and columns, large slate slabs, lead gutters, pipes, and flats, cast-iron columns, and fittings up. May be viewed on SATURDAY. Catalogues had of Messrs. THOMAS and CHAMBERS, Architects, 27, Queen-street; and of PULLEN and SON, 20, Fore-street, Cripplegate.

GRESHAM-STREET WEST. Building Materials of Two Houses.

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on THURSDAY, JUNE 26, at TWELVE, in lots, all the valuable BUILDING MATERIALS and FIXTURES of two houses, Nos. 5 and 6, Gresham-street West, Wood-street, comprising sound brickwork, plain and gauge tuck and jar pointing, roofing and boarding, sashes, doors, floor-boards, shop fronts, lead gutters, batten cisterns, lead pipes, stoves, and other useful fixtures and fittings up. May be viewed on WEDNESDAY. Catalogues had of PULLEN and SON, 20, Fore-street, Cripplegate.

ARTILLERY PLACE, FINSBURY.—Capital Building Materials of seven large Residences, to clear the site for the Royal London Militia Depôt.

PULLEN and SON are honoured with instructions from the Commissioners of the Lieutenancy of the City of London, to SELL by AUCTION, on the PREMISES, on MONDAY, JUNE 23, and following day, at TWELVE, the whole of the excellent BUILDING MATERIALS, FIXTURES, and FLANGE of SEVEN RESIDENCES, of an unusually superior description, No. 1 to 7, Artillery-place, Finsbury, including the Artillery Ground, comprising 5,000 capital stock bricks, good deal timber, in large and useful scantlings, 60 squares of slates and slating boards, lead, in gutters, flats, cisterns, and pipes, 300 pairs glazed sashes, with shutters, modern doors, partitions, bathing pans, chimney-pieces, and interior fittings-up, 300 squares of capital boarded and timber floors, stone paving and steps, coping and cills, iron palisades, rewarded stone, iron, and other railings, modern stoves and ranges, coppers, force-pumps, large iron bookcases, fittings, and all the expensive house and cellar fixtures. May be viewed on FRIDAY and SATURDAY, the premises forming the Estate of HENLEY SMITH, Esq. Clerk to the Lieutenancy, Mansion-house; and of JOSEPH JENNINGS, Esq. Architect, 3, Foley-place; and of PULLEN and SON, 20, Fore-street, Cripplegate.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Office of Messrs. MORTIMAN and THIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

FREEHOLD GROUND, CHANCERY-LANE.—The Commissioners of Sewers of the City of London give notice that they will SELL by PUBLIC AUCTION, at the Office of the Sewers Commission, in the Guildhall Library, at TWELVE at Noon precisely, to receive PROPOSALS for the GRANT of BUILDING LEASES for EIGHTY YEARS, at a ground rent, of the Freehold Premises, situate on the west side of Chancery-lane, and near Fleet-street, late in the occupation of Messrs. Hall, Bell, and Co. and subsequently of Mr. HAYWOOD. Engineer to the Commission, of these Offices in the Guildhall, where forms of proposal may also be obtained. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for their approval, and do not bind themselves to accept any proposal, and no notice will be taken of any proposal that may be received after the above-mentioned time. Persons whose proposals may be accepted will be required to enter into an agreement at once.

JOSEPH DAW, Principal Clerk.

Sewers Offices, Guildhall, June 3, 1856.

FREEHOLD BUILDING GROUND.—TO BE LET or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St. John's-wood. For particulars apply by letter, post paid, to WILLIAM LEWIS, 2, Craven terrace, Craven hill, Paddington.

FREEHOLD LAND.—TO BE LET, or SOLD, a very eligible PIECE of FREEHOLD LAND, adapted for the erection of upwards of forty houses of the fourth rate. Sewers and roads have been made. Situated at Holloway, near to the Archway.—Apply to WALTER JUSTICE, Esq. Solicitor, 6, Bernard-street, Russell-square.

FREEHOLD BUILDING LAND at Norwood, Anerley-grove, and Palace-road Estates.—TO BE LET, 50 FREEHOLD, eligible BUILDING SITES, in close proximity with the Crystal Palace and its railways.—At Hackney, within three minutes' walk of the Victoria-park station, for ninety-five years, at FORTY PLOTS, at ground-rents from 15 per plot per annum upwards, being nearly equal to freehold. Roads and sewers on all the estates complete, and liberal advances to respectable builders.—Apply to Mr. JAS. BRAGG, Devonshire-villa, Rotherithe; at No. 98, Star-street, Edgware-road; and Vale-cottage, Anerley, near the land opposite the Crystal Palace Railway station.

STRATFORD, ESSEX. — FREEHOLD LAND, within three miles of London, exonerated from land-tax and free of tithe, TO BE LET, on Lease, for a long term of years, in large or small plots, suitable for manufactories or building purposes.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

CASSLAND ESTATE, overlooking Victoria-park.—Eligible PLOTS of LAND TO BE LET, for building villas and semi-detached residences; and also Plots of Land, for fourth-rate houses, on the northern portion of the estate.—Plans &c. can be inspected at the Estate Office, Cassland-road, or at Mr. WALES'S office, 8, Great St. Helen's, Bishopsgate.

MOORE PARK ESTATE, KING'S-ROAD FULHAM.—Eligible LAND TO BE LET, on Building Leases, for long terms. Ground rents moderate, and advances will be made, if required. Plans &c. can be inspected at the Estate Office, King's-road, near Stanley Bridge; or at Mr. Wales's Office, 8, Great St. Helen's, Bishopsgate.

LAND for FACTORIES and DWELLING-HOUSES, most eligibly situate, lying between the River Wandle and Garratt lane, at Wandsworth, and near Two Railway Stations. TO BE LET, in one or more plots, for Building purposes. Lease 99 years. Money advanced if required. Apply to Mr. GEORGE LOW, Architect, 1, Church-court, Clement's-lane, City.

HOLLOWAY. — Valuable BUILDING GROUND TO LET, with liberal cash advances, to respectable builders, admirably situated for good Villa Residences, which are much required in this favourite and highly respectable locality. The situation is most healthy, possesses beautiful surroundings, and the access to all parts of London easy. Property in this neighbourhood lets and sells rapidly.—For further particulars, apply to Mr. GEO. CLARKSON, Surveyor and Land Agent, 28, Penton-street, Pentonville

EAST HAM and BARKING.—BUILDING LAND.—TO BE LET on Building Leases, for ninety-nine years, several eligible PLOTS of LAND, close to the Ilford Station, East Ham, and near the station at Barking. The land will have a frontage of 60 feet, with depths of 80 feet, and are well adapted for the erection of houses of from 25l. to 35l. a year.—For particulars apply to MESSRS. GEORGE NICHOLSON and SON, Solicitors, 4, Old Palace-yard, Westminster, or to THOMAS SMITH, Esq. 36, Hart-street Bloomsbury

BUILDING LAND at HATFIELD, HERTS. TO BE LET on building leases, for 50 years, very desirable PLOTS of LAND, within a quarter of a mile of the Railway Station, fronting the high road to St. Alban's, and well calculated to supply the demand for villa residences in this locality. Soil, gravel; bricks and sand in the immediate neighbourhood. For further particulars apply to RICHARD NICHOLSON, Esq. Solicitor, 4, Old Palace-yard, Westminster

TO BUILDERS, PRINTERS, STONEMASONS, &c.—TO BE LET, in the vicinity of Tottenham-court-road, eligible PREMISES, consisting of dwelling-house, workshops, and yard.—Apply to Mr. BELLEN, 4, Princes-street, Bedford-row

VALUABLE BUILDING GROUND.—TO BE LET, on Building Leases, the Valuable PLOT of GROUND, at the north side of Jamaica-row, Bermondsey, and abutting upon the high-road to the Commercial Docks and Deptford, formerly in the occupation of the late Messrs Curling. For further particulars, apply to ALLEN, SNOOKE, and STOCK, Architects and Surveyors, 6, Duke-street, London-bridge

TO BANKERS, INSURANCE OFFICERS, and OTHERS. The LEASE of some valuable PREMISES, near to the Indian House, with a frontage towards Leadenhall-street, of about 25 feet. To BE DISPOSED OF. Some but principals will be dealt with. Apply to ALLEN, SNOOKE, and STOCK, Architects and Surveyors, 6, Duke-street, London-bridge.

TO BUILDERS and OTHERS.—Upwards of THIRTY ACRES of LAND TO BE LET, on Building Leases, in Bermondsey, and in a position of very rapidly increasing value.—Apply to ALLEN, SNOOKE, and STOCK, Architects and Surveyors, 6, Duke-street London-bridge.

OLD FORD, near VICTORIA-PARK.—Valuable FREEHOLD BUILDING GROUND TO LET, with liberal cash advances, situate on a high road, for first-rate houses, which are much required in this rapidly-improving neighbourhood, at which letters will rapidly. For further particulars apply to Mr. CLARKSON, Surveyor and Land Agent, 28, Penton-street, Pentonville

CAMDEN PARK, TUNBRIDGE WELLS. PLOTS of LAND, offering great attractions for villas, and villas of first-rate consequence, TO BE SOLD, or LET on LEASE for 100 years.—Inquire of Messrs. STONE-WALL and SIMPSON, Solicitors, or of Mr. J. M. RICHARDSON, Auctioneer, Tunbridge Wells.

LONDON DISTRICT FREEHOLD LAND and HOUSE SOCIETY, offices, 79, King William-street, City. FREEHOLD BUILDING LAND at PECKHAM, for SALE by TENDER.—The Directors of the above Society are prepared to receive TENDERS for any, or all, of the few PLOTS remaining unsold on the Society's Estate at Peckham. Buildings are not necessary as a portion of the property in front of the road is very commanding. Tenders to be delivered at the Office by Four o'clock, on MONDAY, the 23rd inst. The Directors do not bind themselves to accept the highest, or any Tender. For plans of the Estate, and every information, apply to

E. W. ROBERTS, Secretary.

GEORGE GILBERT SCOTT, Treasurer
June 20, 1856. HENRY CLUTTON, Hon. Sec.

ST. MARYLEBONE.—METROPOLIS LOCAL MANAGEMENT ACT.—At the Vestry, June 7th, 1856, pursuant to the provisions of this Act, vesting the sewerage and drainage in this parish in the Vestry thereof, it was resolved,—
That the entire length of all drains or other drains which pass under the public roads or pavements of this parish be constructed by the Vestry at the expense of the parties who shall require or be ordered to construct such drainage.
That the parties pay beforehand to the Vestry such amount as the Vestry's Surveyor shall require, the balance (if any) to be returned to the applicants after the performance of the works; and if the surveyor's estimate prove insufficient, the parties to pay the additional expense.
That all applications for the sanction of the committee as to drainage or other works be made three clear days previous to the weekly meetings of the Sewers Committee on Wednesdays, at THIRTY o'clock in the forenoon.
That all applications as to drainage be accompanied by a plan of the premises, showing the proposed drainage and the levels thereof, drawn to a scale of not less than an eighth of an inch to a foot.
That in cases where parties may be unable to make the required plan, the same shall be prepared, if the parties desire it, by the Officers of the Vestry, at a charge of not less than five shillings, and not more than ten shillings, to be paid upon making the application.
And notice is hereby given, that the penalties provided by the Act, 18th and 19th Victoria, cap. 120, intituled "An Act for the better Local Management of the Metropolis," for infringement of the regulations of that Act with regard to sewerage and house drainage, will be enforced against all parties contravening the same.
By order,
W. E. GREENWELL, Vestry Clerk.

IT being desirable that her Majesty's Government be in a position to procure CAST IRON of the quality suited to the various purposes to which it is applied in the Service, a series of experiments, already commenced, will be made with every variety of Strong Iron that can be procured, the product of the United Kingdom. These inquiries will comprise:—

1. Chemical analysis.
2. Specific gravity.
Mechanical properties, as shown by
a. Tenacity.
b. Transverse strain.
c. Compressibility.
d. Impact.
e. Bending, a combination of *a* and *c*.
f. Density.

The experiments will be tabulated and published. Iron-masters, wishing to submit their produce to the above investigation, are requested to communicate to the Principal Clerk, War Department, Pall Mall, before 30th JUNE, the terms on which they are willing to deliver at the Royal Gun Factories, Woolwich Arsenal, samples of not less than 6 cwt. of Pig Iron, with a small quantity of the Fuel, Flux, and Ore employed. A certified statement to accompany the samples, giving all particulars, and specifying that the sample of Iron is of the first or second melting, as the case may be, and that similar Iron can be produced in quantity. None that has been melted more than twice will be received.
H. B. DREWRY.
War Department, Pall Mall, 9th June, 1856.

CONTRACTS.

BOROUGH of SUNDERLAND.—SEWERAGE WORKS.—CONTRACT No. 1. To BRICK MANUFACTURERS and OTHERS. The Corporation of Sunderland are desirous of receiving TENDERS for the manufacturing and delivering in a depôt within the borough of Sunderland, the BRICKS necessary for the construction of the brick sewers, cess-pits, side entrances, *&c.* in connection with the said works. The quantity of bricks required will be about two and a quarter millions, including square-bricked and bricks of different radiuses for upwards of eight miles of sewers. Further particulars may be known on application to WILLIAM CROZIER, C.E. Borough Engineer, at his Office, East Cross-street, Sunderland, to whom Tenders are to be sent on or before the 9th day of JULY, 1856, endorsed, "Tender for Bricks." The Corporation do not bind themselves to accept the lowest or any Tender. By order,
WILLIAM SNOWBALL, Town-clerk.

BOROUGH of SUNDERLAND.—SEWERAGE WORKS.—CONTRACT No. 2.—To STONEWARE PIPE MANUFACTURERS and OTHERS. The Corporation of the Borough of Sunderland are desirous of receiving TENDERS for the manufacturing and delivering in a Depôt within the borough of Sunderland, the STONEWARE PIPES, Bends, Junctions, Invert Blocks, Junction Blocks, *&c.* necessary for carrying out the Sewerage Works of the borough. The works comprise the necessary pipes, bends, junctions, *&c.* for about 42 miles of pipe sewers from 6 to 18 inches in diameter, irrespective of private works; the necessary junction and invert blocks for the same; the brick manholes, and the other stoneware which may be required in carrying out the said works. Further particulars may be known on application to WILLIAM CROZIER, C.E. Borough Engineer, at his Office, East Cross-street, Sunderland, to whom Tenders are to be sent on or before the 9th day of JULY, 1856, endorsed "Tender for Stoneware Pipes." The Corporation do not bind themselves to accept the lowest or any Tender.
By order, WILLIAM SNOWBALL, Town Clerk.

LOCAL BOARD of HEALTH, HASTINGS. The Local Board of Health of Hastings are prepared to receive TENDERS for the following WORKS in connection with their WATER-SUPPLY, viz. a 20-horse steam-engine, two boilers, pumps, iron roofs, *&c.*; also for the necessary buildings, including engine-house, boiler-house, cottage, cottage and brick tank. The plans and specifications may be seen at the Town Hall Office, Hastings, on and after the 17th inst. when Tenders must be delivered by TWELVE o'clock at noon, on TUESDAY, the 1st day of JULY next. The Local Board are not bound to accept the lowest or any Tender. By the Local Board,
JOHN G. SHORTER, Town Clerk.
Hastings, June 9th, 1856.

TO CONTRACTORS for PUBLIC WORKS. The Local Board of Health of Hastings give notice, that they are prepared to receive TENDERS from competent persons for the DRAINAGE of part of their district. The Contract will comprise the CONSTRUCTING and LAYING of about fifty yards of 4 feet CAST-IRON CULVERTS; 100 yards of 15-inch CAST-IRON PIPES (all provided by the Local Board); about 2,147 yards of BRICK SEWERS, from 1 foot 6 inches to 4 feet; and about 1,400 yards of GLAZED STONEWARE PIPE-sewers from 9 inches to 15 inches. Also the necessary Gullies, Ventilating Shafts, Side Entrances, and Tide Flaps. The specification and conditions of Contract and Tender, with printed form of Tender, may be obtained, upon payment of five shillings, and the plans, sections, and drawings, may be inspected at the Office of the Town Clerk, High-street, Hastings, between the hours of TEN and FOUR, on and after the 17th instant. The Local Board will require the works to be completed within six months from their commencement; and they do not bind themselves to accept the lowest or any Tender. Sureties will be required. Sealed Tenders on the forms supplied by the Local Board, properly indorsed and addressed to "The Hastings Local Board of Health," must be delivered at the Town Clerk's Office, Hastings, before TWELVE of the clock at noon of FRIDAY, the 25th day of JULY next.—By order of the Local Board,
JOHN G. SHORTER, Town Clerk.
Hastings, June 9, 1856.

TO CONTRACTORS and OTHERS.—The Board of Highways for the Parish of Saint Mary, Nottingham, will, at their meeting, to be holden at the Town-hall, on the 4th day of JULY next ensuing, be ready to open TENDERS from parties willing to undertake the CONSTRUCTION and COMPLETION of the following SEWERAGE WORKS, viz.:—
CONTRACT A.—The laying down and constructing a Main Low Level Sewer, together with all the several Works appertaining thereto, commencing at the present exit of the River Leen, under the Nottingham Canal, in the East Croft Meadow, and terminating at the Junction of the Leen and Trasser's Leen, near the parish of Sneinton.
CONTRACT B.—The laying down and constructing a Main Low Level sewer, together with all the several Works appertaining thereto, commencing at the Manvers'-street Sewer, in Hermitage-lane, and proceeding by direct and curving lines to, and terminating at, the River Trent.
Plans, sections, drawings, and specifications of the above Works may be inspected, and forms of Tender obtained, at the Offices of Messrs. JOHN UNDERWOOD and FREDERICK, Engineers, Peter-gate, Nottingham, on and after the 20th inst.—All Tenders must be sealed and addressed to the Board of Highways, for the parish of Saint Mary, "Tender for Sewerage Works," Offices, Leen side, Nottingham, on or before the said 4th day of JULY.—By order of the Board,
Nottingham, June 10, 1856. C. JENKINS, Clerk.

TO BUILDERS.—Persons desirous of CONTRACTING for the ALTERATION and ENLARGEMENT of SCHOOL and the ERECTION of a new RESIDENCE for the Head Master, at Kettering, in the county of Northampton, may see the plans and specification and obtain a bill of the quantities at the Office of Mr. E. F. LAW, Architect, Northampton. The TENDERS are to be delivered by the Architect on or before SATURDAY, the 5th day of JULY next.
N.B. The Trustees do not pledge themselves to accept the lowest Tender. E. F. LAW.
Priory Cottage, Northampton, June 17th, 1856.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office, Dublin, 7th June, 1856.—The Principal Officers of her Majesty's War Department hereby give notice that they will receive proposals for the following CONTRACT, viz.: For the CONSTRUCTION and ERECTION of a RACKET COURT and TWO BALL COURTS, at the Temporary Barracks, Curragh of Kildare, in the Curragh district. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and at the Royal Engineer's Office at the Curragh, and may obtain specifications, with the terms of Contract. The whole of the work to be completed within eighty days after the date of order to proceed with the work. The letters of Tender with specifications to be sealed, and transmitted under cover to "The Director General of Contracts, War Department, Pall Mall, London," so as to be received on or before the 24th day of JUNE, 1856, and to be marked on the outside "Tender for work at the Curragh of Kildare."

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office, Dublin, 13th June, 1856.—The Principal Officers of Her Majesty's War Department hereby give Notice, that they will receive proposals for the following CONTRACT, viz.:—For RAISING the present WATER-TOWER, and FIXING CLOCK thereon, at the Temporary Barracks, Curragh of Kildare, in the Curragh District. Persons desirous of tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and at the Royal Engineer's Office at the Curragh, and may obtain specifications, with the terms of Contract. The whole of the work to be completed within one hundred days after the date of order to proceed with the work. The letters of Tender with specifications to be sealed, and transmitted under cover to "The Director General of Contracts, War Department, Pall-mall, London," so as to be received on or before the 1st day of JULY, 1856, and to be marked on the outside "Tender for work at the Curragh of Kildare."

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that sealed TENDERS, addressed to the Director-General of Contracts will be received at the War Department, Pall-mall, on or before the 30th JUNE, 1856, for SUPPLYING and LAYING DOWN GRANITE PAVING, at the Tower of London. The present Station and plan for the same may be seen, and forms of Tender obtained at the Royal Engineer's Office, Tower between the hours of ELEVEN and THREE o'clock, from the 23rd to the 30th JUNE, 1856, inclusive.—The War Department reserves to itself the right of rejecting the whole or any of the Tenders.
Royal Engineer's Office, London District,
13th June, 1856.

TO BUILDERS.—Sealed TENDERS for BUILDING the NORTH WING of NEW BARRACKS, to be erected at Devonport; separate Tenders for the Asphalte Work, and also for lighting both wings of the barracks with Gas, including all requisite fittments, will be received at the War Department, Pall-mall, London, on or before THURSDAY, the 31st JULY next, at noon, addressed "To the Secretary to the Board of Ordnance," and endorsed, "Tender for new Barracks, Devonport," "Asphalte Work for new Barracks, Devonport," "Gas Works for new Barracks, Devonport," as the case may be, on the lefthand corner of the envelope. The north wing of the new barracks comprises: The officers' barracks and Mess-buildings, as for barracks and without mid-central building, and canteen, &c. of nine walls, roads, parade, drains, &c. &c.—Plans and specifications, with terms of contract, may be seen, and forms of Tender and Agreement obtained at the Royal Engineer's Office, at Devonport, from the hours of NINE and FOUR o'clock on week days from TUESDAY, the 1st JULY, to TUESDAY, the 29th day of JULY next, both days inclusive.
Royal Engineer's Office, Devonport, 21st June, 1856.

THE BOARD of WORKS for the LEWISHAM DISTRICT.—Notice is hereby given, that a Meeting of this Board will be held at their Offices, in Grove-place, Lewisham, on THURSDAY, the 26th day of JUNE instant, at SIX o'clock in the evening for the purpose of RECEIVING TENDERS for the EXECUTION of the SEWERAGE WORKS, proposed to be constructed in STANSTEAD-LANE, and parts adjacent, within the said district. A specification and plans will be at the Offices of the Board for inspection, between the hours of TEN and FOUR, up to the day and hour fixed to receive the Tenders. Sealed Tenders to be sent in on the printed form to be obtained at the Office, by or before FOUR o'clock in the afternoon of the said 26th of JUNE instant. The Board do not bind themselves to accept the lowest or any Tender.—By order,
OCTAVIUS C. TRYON EAGLETON, Clerk to the Board.
Grove-place, Lewisham, June 19th, 1856.

HAMPSTEAD JUNCTION RAILWAY. TO CONTRACTORS.—The Directors of the Hampstead Junction Railway Company are prepared to receive TENDERS for the CONSTRUCTION of the RAILWAY from Kentish-town to Willesden. Parties desirous of tendering may see the drawings and obtain a statement of the quantities at the Office of Mr. GEORGE BERKLEY, the Engineer of the Company, 24, Great George-street, Westminster, on and after Monday, the 23rd inst. between the hours of TEN and FOUR o'clock. Sealed Tenders, addressed to the Secretary, at Euston Station, to be sent in on or before WEDNESDAY, the 2nd JULY, at TEN o'clock, a.m. The Directors do not bind themselves to accept the lowest Tender.
By order,
GEORGE BERKLEY, Secretary.
Secretary's Office, Euston Station, June 19, 1856.

ST. GEORGE'S SCHOOLS, BATTERSEA. Builders wishing to state TENDERS for the ERECTION of these SCHOOLS, may see the plans and specification, &c. and obtain bills of quantities, at Mr. PEACOCK'S Office, 15, Bloomsbury-square, after MONDAY, JUNE 23. Tenders to be delivered on SATURDAY, JULY 5, before FIVE o'clock.—The Trustees do not pledge themselves to accept the lowest or other Tender.

[*For remainder of Contracts see next page.*]

CONTRACTS.

COMPLETION of ROCHESTER-BRIDGE, REMOVAL of the ANCIENT STRUCTURE and FORMATION of QUAY.—The Wardens and Assistants of Rochester-bridge will be ready on THURSDAY, the 24th day of JULY, 1856, at the Bridge Chamber, in Rochester to receive TENDERS from persons willing to undertake the TAKING DOWN of the present STONE BRIDGE of ten arches across the river Medway there, with its piers, foundations, and abutments; and the removal of the materials, and of all local impediments caused thereby to the navigation of the river; and also for the construction of an embankment or quay, on the Rochester side of the river, in the direction of the castle. The parties tendering are required to state their terms for the whole under the several heads and description. Plans, drawings, and specifications of the intended works may be seen at the Office of the Resident Engineer, in Strood, any working day between the hours of TEN and FOUR, when and where all requisite particulars may be ascertained. Sealed Tenders for the above works are to be delivered at the Bridge Chamber, Rochester, and marked on the outside, "Tender for taking down, &c. Rochester Bridge," on or before the final moment on the Master side of or before WEDNESDAY o'clock at noon, on THURSDAY, the 2nd 24th day of JULY, 1856 after which hour no Tenders will be received, save and except by a letter from one person engaging to become bound in 2,000 or from two persons in 1,000 each, with the party tendering, for the due performance of the contract. The Wardens will not hold themselves bound to accept any Tender unless fully approved by them. By order of the Wardens and Assistants,

GEORGE ENSELL, Bridge Clerk.

Rochester, June 19th, 1856.

HACKNEY UNION.—CONTRACT for the BEST BLUE GUERNSEY GRANITE CHIPPINGS.—The Guardians of the Poor of this Union are ready to receive TENDERS for CONTRACTS for the supply and delivery (each separately) to the Stone Yard belonging to the Union House, Homerton Bridge in the Hackney Marshes, in all the month of OCTOBER next, free of all expenses, at per ton, and to be paid for in the month of OCTOBER, when the whole quantity is delivered. Sealed Tenders, with samples of the stone intended to be supplied, to be sent to the Union House endorsed "Tender for Granite Chippings," on or before TUESDAY the 24th day of JULY next, which will be opened by the Board, the next morning, at TWELVE o'clock at the Union House in Homerton, when the parties tendering, or some competent person from them, must attend to answer when called for. The Board will not bind themselves to accept the lowest or any Tender unless the quality of the sort of stone may be seen at the Union House on application to the master.

CHARLES HORTON PULLEY, Clerk.

MONTGOMERYSHIRE.—WELCHPOOL WATER WORKS.—Persons desirous to CONTRACT with the Local Board of Health for the district of Welchpool, in the county of Montgomery, for the supply of CAST-IRON PIPES and their CASTINGS, may, upon payment of five shillings, obtain a copy of the specification and form of Tender, on application to ALFRED MEREDITH, Solicitor, Welchpool. Any further information may be obtained at the Office of ROBERT DYMOND and SONS, Surveyors, Exeter. The Board do not pledge themselves to accept the lowest or any other Tender, nor any offer which is considered unless made in the form deposited with the specification. The Tenders must be sent in sealed cases, "Sealed Tenders," and delivered on or before the 7th day of JULY, 1856, at the office of ALFRED MEREDITH, Clerk to the Local Board of Health, Welchpool.

MONTGOMERYSHIRE.—WELCHPOOL LOCAL BOARD of HEALTH.—Persons desirous to CONTRACT with the Local Board of Health for the district of Welchpool, in the county of Montgomery, for the supply of STONE-WARE SEWER PIPES and other articles, may, upon payment of five shillings, obtain a copy of the specification and form of Tender on application to ALFRED MEREDITH, Solicitor, Welchpool. Any further information may be obtained at the Office of ROBERT DYMOND and SONS, Surveyors, Exeter. The Board do not pledge themselves to accept the lowest or any other Tender, nor any offer which is considered unless made in the form deposited with the specification. The Tenders must be sent in sealed cases, "Sealed Tenders," and delivered on or before the 7th day of JULY, 1856, at the office of ALFRED MEREDITH, Clerk to the Local Board of Health, Welchpool.

BOARD of WORKS, WHITECHAPEL DISTRICT.—Notice is hereby given, that a Meeting of this Board will be held on MONDAY, the 23rd day of JUNE instant, at TEN o'clock in the forenoon, at the Board Room, No. 258, Great Alie-street, Whitechapel, to receive TENDERS for CLEANSING the STREETS and GULLIES, &c. and for REMOVING the DUST and other REFUSE from within the district, for the term of one year, to commence on the 1st day of JULY next. Persons disposed to contract may obtain printed forms at the Office of the Board.—All Tenders must be delivered at the Office of the Board before FOUR o'clock in the afternoon of the day of meeting, and any Tender which is not upon the printed forms prepared by the Board, and also signed by the person or persons Tendering, will be rejected. The Board, however, do not bind themselves to accept the lowest or any Tender

ALFRED TURNER, Clerk.

15, Great Alie-street, Whitechapel, June 13, 1856.

ROMSEY, HAMPSHIRE.—To BUILDERS and OTHERS. The Burial Board of the Parishes of Romsey Infra, and Romsey Extra are desirous of receiving TENDERS for building, on their new burial ground TWO CHAPELS and a LODGE, and also for constructing the Boundary Walls with Entrance Gates, according to plans and drawings prepared for the purpose by Mr. J. WEBB, of No. 60 King-street, Whitehall, London, the architect, to whom application may be made. The plans, drawings, and specification may be seen at my Office in Romsey, between the hours of TEN A.M and FIVE P.M. inclusive, and from the 16th of JUNE instant, until the 5th of JULY next; and the Board will not object to receive Tenders from the separate trades, or for the whole or any part of the works, but they do not pledge themselves to accept the lowest Tender, or the lowest Tender. Sealed Tenders are to be forwarded to me before FIVE o'clock in the afternoon of TUESDAY, the 8th of JULY next, marked, "Tender for Cemetery," and the due performance of the works to be prepared at the expense of the contractor) will be required.

C. L. LORDAN, Clerk to the Board.

Romsey, June 14, 1856.

NEW CONGREGATIONAL CHURCH and SCHOOLS, DORKING.—TO BUILDERS. Parties willing to CONTRACT for the ERECTION of the above Buildings may see the plans, elevations, and specifications at the ESTATE OFFICE, Deepdene, Dorking, and at the Office of M. DEVENISH, Esq. Dorchester.—The Tenders to be delivered sealed, and directed to the Building Committee, not later than FRIDAY, the 27th instant, at the Estate Office, Deepdene, Dorking. Tender will not necessarily be accepted. Information, and bills of quantities can be obtained on application to Messrs. POULTON and WOODMAN, Architects, Grey Friars-road, Reading.

ROYAL NORTH LINCOLN MILITIA STOREHOUSE.—To BUILDERS, BRICKLAYERS, CARPENTERS, and OTHERS.—Persons wishing to CONTRACT with the Lieutenancy of the county of Lincoln, for the several WORKS required to be done in the ERECTION of a STOREHOUSE at Lincoln, for the Royal North Lincoln Regiment of Militia, are desired to send their sealed proposals to Mr. EDWARD [illegible], Architect, [illegible] Lincoln, on or before MONDAY, the 30th instant, by whom the Contract will be signed, and to whom the Castle of Lincoln, on and after MONDAY, the 30th instant, be given the required Plans, Specifications, and Forms of Tender for the said Stores; and Tenders must be delivered on the 2nd day of JULY next at the Castle of Lincoln, which will be holden at the County Hall on the following FRIDAY. The Magistrates will not bind themselves to accept the lowest or any Tender, and they will require satisfactory [illegible] for the due performance of the works. By order,

FREDK. BURTON, Clerk of Gaol Sessions.

Lincoln, June 16, 1856.

CONTRACTS.

ST. MARYLEBONE, JUNE 14, 1856.—CONTRACTS for the HIRE of HORSES and ONE-HORSE CARTS.—Notice is hereby given, that the Vestrymen of the parish of St. Marylebone, in the County of Middlesex, will meet in the Board-room of the Court-house of the said parish, on SATURDAY the 28th day of JUNE, 1856, at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to CONTRACT for the SUPPLY of HORSES and ONE-HORSE CARTS from the said 28th day of JUNE until the 25th day of MARCH, 1857.—Further particulars may be known and forms of Tender procured, from the Surveyor, Mr. ROBERT SCACE, at his daily attendance at the Court-house, from TWELVE till ONE o'clock; but no Tender will be received unless the same be delivered sealed up, before ELEVEN o'clock in the forenoon, on the said 28th day of JUNE, and no Tender will be received after the specified time. The Vestry do not pledge themselves to accept the lowest or any of the Tenders. The contractor to pay three guineas as the expenses of the Board and contract. The Vestry will require the parties tendering, or some person on their behalf, to be in attendance at the time of opening the Tenders.

By order,

W. E. GREENWELL, Vestry Clerk.

CHESTERFIELD, TAPTON, and CALOW CEMETERY.—To BUILDERS, CONTRACTORS, and OTHERS.—The BURIAL BOARD for the Parishes of Chesterfield, Tapton, and Calow, in the County of Derby, are prepared to receive TENDERS for the Erection of Chapels, Lodge, Entrance Gates, Fence Walls and Fencing, &c. at Spital, near Chesterfield. The Plans, Drawings, and Specifications can be seen, and all information obtained at the Offices of the Architects, Messrs. BIDLAKE and LOVATT, Market-place, Wednesbury, and at the Offices of Mr. F. Sureties will be required for the due performance of the Contract, and the Committee do not bind themselves to accept the lowest or any other Tender.

H. and F. CHESTER, Joint Clerks to the Vestry,
June 6 1856. 1, Church-row, Newington Butts.

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

Viscount Ranelagh.
Right Hon. R. A. C. N. Hamilton, M.P.
Hon. Col. Lowther, M.P.
J. C. Colvile, Esq., M.P.

To ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS, DRAINAGE, and FENCING, on the MALDON ESTATE, Essex. The drawings and specification may be seen at the Offices of Mr. HERBERT CODD, Solicitor, Maldon; or of the Surveyor, Mr. GEORGE MORGAN, 23, Norfolk-street, Strand, London, on and after THURSDAY, 19th JUNE, inst., between the hours of TEN and TWO. Tenders are to be delivered on or before TWELVE o'clock, on FRIDAY, JULY 4th, to the Surveyor, at his Offices, and endorsed "Tenders for Roads, &c. Maldon Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN,
23, Norfolk-street, Strand, London.

TO BUILDERS.—Persons desirous of CONTRACTING for the ERECTION of a CORN EXCHANGE at St. Albans, may inspect the plans and specifications at the Offices of THOMAS W. BLAGG, Esq. the Town Clerk, and at my Offices, Prior's-gate, Grimsthorpe, on the 1st day of JULY next, on which day the Tenders are to be sent in.

JAMES MURRAY, Architect.

Coventry, June 5th, 1856.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc Tube, and Copper Wire. Gas Fittings, Brackets, and Lamps of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Corcopeplex Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

JAMES BILLINGE, Manufacturer of all kinds of Lancashire Wrought-iron Hinges and Locks, ASHTON, near Wigan.

IRON CHURCHES, STORES, &c.—For SALE, Substantial Corrugated Iron Stores, Churches, Dwelling-houses and every description of Buildings, adapted to all climates. Iron Roofs constructed for all parts of the world. An Iron Church with sittings for 750 people, for hire or sale.—To view and for further particulars apply to SAMUEL HEMMING, Cliff House Works, Bow, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be efficiently warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus, and to be seen in extensive operation at their Premises, King's-road, Chelsea.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	2¼	7s. 0d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent, that a direct end grain of the iron is presented longitudinally, and which become, when built into the brick-work, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

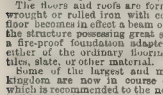
Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.



The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

KIMBERLEY'S NEW PATENT FLOORING CRAMP

continues to receive the patronage one and all, of every leading Builder Engineer, and Architect, not only in England, but throughout the world. Its simplicity, power, and economy still remain unquestionable, even by the side of its most important rivals, and the steady, annual increase in its sale, is the best proof of it. It is useful in many ways as a cramp, and unlimited evidence can be given that it is a most valuable tool, which no Builder should be without.

London Agents—Messrs. THOMAS PUGH & CO. Wholesale Ironmongers, 15 King-street, Snow-hill, London.

LOSH, WILSON, and BELL,

NEWCASTLE-ON-TYNE.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS !—Mr. MAGNUS is the only exhibitor who has obtained two medals receive this double honour ; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments ; plain and exquisitely decorated slabs for the tops of lon-tables, chiffoniers, consoles, &c. ; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets ; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

SLATE SLABS.—The Cambrian Slate Company, Festiniog, N. Wales, are now ready to receive orders for sawn and planed SLABS of all sizes and thicknesses. They have now ready for shipment a lot of about 100 tons of promiscuous slabs, sizes varying from 7 feet by 4 feet, down wards, and thickness ¼-inch to 2-inch. The metal is of the best quality, soft, and well adapted for the London market. Roofing slates of all dimensions. Communications to be addressed to Mr. GRIFFITH JONES, Cambrian Quarry, Festiniog, N. Wales.

SLATE CISTERNS, SINKS, and every description of Slate Slab Work, best Bangor Roofing Slates or Covering.—T. B. HAYWOOD'S Priced-list, which can be had on application, will be found lower than any other. Roofs covered with best Bangor Countesses within a four-mile circle, 21s. per square Trevalga Wharf, Ratcliffe-cross.

WELSH ROOFING SLATES.—TO BE SOLD, a bargain, a few CARGOES of DUCHESSES, COUNTESSES, &c. well assorted, from 50 to 100 tons.—Particulars of Messrs. WILKINSON and CO. 36, Gresham-street, City. Good bills will be taken.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, Vauxhall Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries ; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street ; also by Messrs. Sharpe, Tooley-street ; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

GREEN SLATE, the produce of the Tyn-y-Wergloed Quarries, is acknowledged to be far superior to any hitherto used. Blue and Purple Slate of the first quality.—Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street ; or to Mr. W. G. JENNINGS, Pen-y-Groes, near Carnarvon.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

Life Assurances are granted under an extensive variety of forms and at Moderate Premiums; the rates for the Younger Ages being lower than those of many of the older and most respectable offices.
Participation of Profits, Four-fifths, or Eighty per cent. of the declared Profits will be divided quinquennially among those entitled to participation.
Non-participating Scales of Premium. Policies issued at minimum Rates, without participation in profits.
Life Policies are not liable to forfeiture by the Lives Assured proceeding beyond the prescribed limits without the cognizance of the holders of such Policies.
Reduced Extra Rates for residence out of Europe.
No charge for Stamps or Medical Fees.
Fire Assurances, both at home and abroad, are accepted at very Moderate Premiums.
The Assured participate in the Fire Profits in respect of Policies in force for five complete years at each period of Division.
Losses by Lightning are made good; and the Company are liable for Losses by explosion, except when occasioned by Gunpowder, or in cases specially provided for in the Policy.
Detailed Prospectuses will be furnished on application.
FRANCIS AUGUSTUS EICHBAUM, Actuary and Secretary.

The Receipts for the Renewal Premiums due at Midsummer are ready for delivery at the Office in Town, and at the Agencies throughout the country.

ANCHOR ASSURANCE COMPANY, for LIFE, FIRE, ANNUITIES, and ENDOWMENTS.

ANNUAL DIVISION OF PROFITS.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY.
14, Waterloo-place, London, and 30, Brown-street, Manchester.

DIRECTORS.

THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Alderman.
Deputy-Chairman.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy-holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of five annual premiums.
The Annual General Meeting was held on the 24th May, 1856, when a highly satisfactory Report of the state of the affairs and progress of the Institution was presented to the Members. During the last three years, upwards of 1,200 new assurances have been effected, yielding an increase of premium income of more than 20,000l. per annum; and although a general high rate of mortality has prevailed among Assured lives during the last two years, it has not been deemed necessary to reduce, in the slightest degree, the allowances previously awarded to the Policy holders.
The Members present at the meeting were fully satisfied with the Report, and resolved unanimously that a reduction of 3½ per Cent. should be made in the current year's Premium payable by all Policy-holders now entitled to participate in the Profits.
Credit is allowed for half the annual Premiums for the first five years.
A. R. IRVINE, Managing Director.
14, Waterloo-place, London.
2nd June, 1856.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY. Established 1831.
The Annual Meeting of the above Society was held in Edinburgh on the 6th MAY. The report by the Directors stated that the number of policies issued during the year ending 1st MARCH last, was 634, the sums assured thereby being 230,954; and the annual premiums thereon, 9,104.
The result of the investigation for the triennial division of profits was then announced. The surplus ascertained to have arisen amounted to 181,858, which wholly belongs to the members, but of which one-third (61,276) must, by the laws of the society, be set aside as a reserve for allocation at the next triennial division in 1859.
From the remaining two-thirds a Bonus was declared at the rate of 1l. per cent. per annum, on all policies on which six premiums had been paid and on the sums in the policies, but also on the former vested bonuses.
There was left, in addition to 61,276l. of reserve above stated, a surplus of 13,692l.; together, 74,968l. to go to the next division.
The Invested Funds of the Society amount to £979 361
The Annual Revenue to 164 140
The Existing Assurances to 4,784,840
Copies of the report may be obtained at the Society's Head Office, 26, St. Andrew-square, Edinburgh; at the London Office, 126 Bishopsgate-street Within; and at any of the Agencies.
ROBERT CHRISTIE, Manager.
ARCHIBALD T. RITCHIE, London Agent.

ELECTRIC TELEGRAPH POPULARIZED. 100 Engravings. 1 vol. 2s.

London: WALTON and MABERLY, Upper Gower-street, and Ivy-lane, Paternoster-row.

Third Edition.

THE BUILDER'S FRIEND, Price One Shilling.

Office of "The Builder," and of all Booksellers.

DEPARTMENT OF SCIENCE AND ART.

PEASE'S PRACTICAL GEOMETRY.

An Introduction to every branch of mathematical drawing (Sanctioned as above

The Third Edition, revised and enlarged, is now ready, price 2s. 6d.

RELFE, BROTHERS, 104, Aldersgate-street, London.

HAND-RAILING SIMPLIFIED, upon entirely new and original principles.

By ROB. RIDDELL.

TRÜBNER and CO. 12, Paternoster-row, Publishers, price 2s.; The system laid down has been thoroughly tested by some of the first talent in London, and pronounced to be the most simple and only reliable guide that has ever appeared on the subject of hand framing.

EDINBURGH REVIEW, No. CCXI.—Advertisements and Bills intended for insertion are requested to be forwarded to the publishers on or BEFORE THURSDAY, JULY 3.

London: LONGMAN and CO. 39, Paternoster-row.

Just published, price One Guinea,

PHOTOGRAPHIC PANORAMA of the INTERIOR of JERUSALEM, taken from a terrace on the south-east of Sion, in a series of thirteen continuous photographs, 8 feet long; with a plan and references by GEORGE I. WIGLEY, Architect.

By the same Author, ARCHITOLOGICAL STUDIES in JERUSALEM: two Lectures delivered at the Royal Institute of British Architects, illustrated with a plan and fourteen photographs. Price One guinea.

The text and plan may be had for 1s. 6d. and each photograph separately, at the same price.

London: C. DOLMAN, 61, New Bond-street, and 22, Paternoster-row.

PUBLIC EXAMINATIONS in FREE-HAND and MECHANICAL DRAWING.—Notice is hereby given, that Examinations in Free-hand and Mechanical Drawing will be held by the Department of Science and Art at Marlborough House, Pall-mall, in July next. The Examinations are instituted to Students in the Schools of Art, but are open to all who nominate, on or before 1st July, by letter to the Registrar, their desire to be examined, and produce satisfactory specimens of their proficiency at the day of examination, which will be forwarded subsequently. Prizes of Instruments and Certificates will be granted to all who pass the requisite examination.

NORMAN MACLEOD, Registrar

TO ENGINEERS, ARCHITECTS, and SURVEYORS.—TO BE DISPOSED OF, by valuation or otherwise, the "BOOK of INSTRUMENTS" of an ENGINEER and LAND SURVEYOR, recently deceased; comprising valuable transit theodolite, with circumferenter in bronze; Sims's 16-inch dumpy level, with tangent screw; large box of instruments, pantographs, protractors, levelling staves, mounted and tracing papers, and every requisite for an engineer or surveyor's office. Any gentleman in the profession will find this an excellent opportunity of furnishing himself, as the proprietor is willing to dispose of them at a great sacrifice.—Apply to Mr. KILBURNE, Hawkhurst Kent, who will be willing to give any information, and treat for any portion of the stock.

LEVELLING, Surveying, Drawing, Mapping, Estimating, for Railway and other Works; Enlarging, Reducing, Copying, Tracing, &c. undertaken by Mr. C. B. RICHARDS, late an Officer of the Ordnance Survey, Public Surveyor of Sewers, Surveyor for the Local Board of Works, or Local Boards of Health, will find him a useful auxiliary, from his experience as the details of Sewage Works.—4 Trafalgar-square.

TO ENGINEERS, SURVEYORS, ARCHITECTS, &c.—A Head Draughtsman kept Surveyors, Levelers, Architects and Builders' Assistants, Clerks of Works, and Draughtsmen, requiring EMPLOYMENT, Effectively ascertained before recommended.—Apply to Mr. C. B. RICHARDS, Engineer and Surveyor, 4 Trafalgar-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES, Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading and Tinting; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Geometrical Projection, Model Building, Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms: Day Pupils, Three Guineas per Quarter; Evening Pupils One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 34, Guilford-street, Russell-square.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 90, Westminster Bridge-road, Lambeth, near ASTLEY'S Theatre, begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at a very little low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

TO SURVEYORS, &c.—8-INCH DUMPY LEVELS, with tripod and telescope, by reversion, with cross wires, and highly magnifying eye-piece, by Cooke, of London, for Sale. Lists sent free on application to JOHN ARCHBUTT, 90, Westminster-bridge-road, Lambeth, near Astley's Theatre.

D. BRUCCIANI'S GALLERIA DELLE BELLE ARTI, 5 LITTLE RUSSELL-STREET, Covent-garden

The largest Assortment in Europe of Bassi-relievi, Friezes, &c. for building and decorative purposes. Model Busts in all various branches executed from drawings.

ROYAL MANCHESTER INSTITUTION. EXHIBITION of MODERN PICTURES and WORKS of ART.—This Exhibition will be OPENED as soon as practicable after the close of the Royal Academy. Pictures, &c. from London will be forwarded by Mr. JOSEPH GREEN, 5, Charles-street, Middlesex Hospital, if delivered to him before the 25th JULY. From other places artists are requested to send them by the most convenient and expeditious conveyance, and to arrive not later than August 4. Works from the Royal Academy must be delivered to Mr. GREEN immediately on the closing of that Exhibition. All works must be sent except from artists to whom the Exhibition circular has been forwarded; and Mr. GREEN is instructed to receive and forward no pictures or works at the expense of the Institution, except on the production of such circular. Not more than two works by any one artist will be hung. EDWD. SALOMONS, Hon. Sec.

TO BRICK-MAKERS, CONTRACTORS, and OTHERS.—An AINSLIE'S PATENT BRICK-MACHINE, never seen in use with Pug Mill and all bearing complete, TO BE SOLD a great BARGAIN.—Apply to Mr. FURNESS, 1, Adelaide-place, London-bridge.

VICTORIA-WHARF, EBURY-BRIDGE, PIMLICO.—Important Sale of York Stone.—Removal of Business from the above Wharf to Bridge-row Wharf, Pimlico.

TO BE SOLD, by PRIVATE CONTRACT, as arranged in suitable lots, on MONDAY, JUNE 23, 1856, and following days, to SATURDAY, JUNE 28th, inclusive, at a considerable reduction in prices, the whole of the surplus stock on the above wharf, comprising 60 to 80,000 feet of rubbed, tooled, and self-faced PAVING and LANDINGS, sawn all beds of all thicknesses, headstones, 2-in. York sinks, tooled coping, cills, steps, curbs, pedestrians, York and Portland blocks, &c. &c.; also one travelling-crane complete, two carts, one large stone-truck, one long iron pillar, two trolleys barrows, harness, stable-fittings, and numerous other effects. The stock can be viewed and particulars had on application, from 19th June.

FREEHOLD BUILDING GROUND.—For SALE, upon advantageous terms, PUBE FRONT PLOTS of GROUND, in Upton-lane, West Ham, leading from Stratford to the Victoria Docks. The purchaser can have the money advanced for building on the same, if required.—Apply between the hours of TEN and FOUR at Mr. BARRARDS, 8, Harp-lane, City; or at the Bedford Coffee-house, Clapham-rise.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 4, Danes-inn, St. Clement's, Strand.

FREEHOLD GROUND, CHANCERY-LANE.—The Commissioners of Sewers of the City of London hereby give Notice, that they will MEET in the GUILDHALL of the said City, on TUESDAY, the 22nd of JULY next, at TWELVE at Noon precisely, to receive PROPOSALS for taking on BUILDING LEASE, for EIGHTY YEARS, at a Ground Rent certain, PLOTS of GROUND, situate on the west side of Chancery lane, and near Fleet-street. Further particulars may be had, and plans seen, on application to Mr. HAYWOOD, Engineer to the Commission, at their Offices in the Guildhall, where forms of proposal may also be obtained. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for their approval, and do not bind themselves to accept any proposal unless deemed advantageous. Persons making proposals must attend at the above day, and the party whose proposal is accepted will be required to execute an agreement at the time.

JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, June 3, 1856.

FREEHOLD BUILDING GROUND.—TO BE LET or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most desirable part of St. John's-wood. For particulars apply by letter, post paid, to WILLIAM LEWIS, 2, Craven-terrace, Craven-hill, Paddington.

CASSLAND ESTATE, overlooking Victoria-park.—Eligible PLOTS of LAND TO BE LET, for building villas and semi-detached rest nces; and also Plots of Land, for fourth-rate houses, on the south-eastern portion of the estate.—Plans, &c. can be inspected at the Estate Office, Cassland-road, or at Mr. WALES'S Office, 8, Great St. Helen's, Bishopsgate.

MOORE PARK ESTATE, KING'S-ROAD FULHAM.—Eligible LAND TO BE LET on Building Leases, for long terms. Ground rents moderate, and advances will be made, if required. Plans may be seen at the Estate Office, King's-road, near Stanley Bridge; or at Mr. Wales's Offices, 8, Great St. Helen's, Bishopsgate.

LAND for FACTORIES and DWELLING-HOUSES, most eligibly situate, lying between the River Wandle and Garratt-lane at Wandsworth, in close to two Railway Stations. TO BE LET, in one or more plots, for Building purposes, for 99 years. Money advanced if required.—Apply to Mr. GEORGE LOW, Architect, 1, Churchcourt, Clement's-lane, City.

HOLLOWAY. — Valuable BUILDING GROUND TO LET, with liberal cash advances, to respectable builders, admirably situated for good Villa Residences, and to be much admired in this favourite and highly respectable locality. The situation is most healthy, possessing beautiful and commanding views, and the access to all parts of London easy. Many neighbouring residences let and sells rapidly.—For further particulars, apply to Mr. GEO. CLARKSON, Surveyor and Land Agent, 48, Penton-street, Pentonville.

STRATFORD, ESSEX. — FREEHOLD LAND, within three miles of London, eowarated from land-tax and free of tithe, TO BE LET, on lease, for a long term of years, in large or small plots, a stable for manufactories or building purposes.—Apply to Mr. W. P. DEAN, Architect and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

NEW WINDSOR ESTATE.—Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences, with Stabling, which are much wanted in this beautiful locality. The land is in the Street in or near Windsor, abutting on the Park and Long Walk, and commanding a splendid view of the Castle. Within ten minutes of the Great Western and fifteen minutes' walk of the South-Western Railway Stations. Advances can be had by responsible parties.—For particulars apply to Mr. WILLIAM SIM, Architect and surveyor, 2, Dane's-inn, Strand.

BUILDING LAND, Harriet-street, Stanley-bridge, Fulham, TO BE LET, on building lease for ninety-seven years, on which is to be erected two handsome houses, with kitchens; ground-rent 24 per house; in a good spot for letting. This is an opportunity seldom to be met with.—Inquire of Mr. GIBBS, 21, Harriet-street, Stanley-bridge, Fulham.

TO BUILDERS.—SMALL PLOTS of FREEHOLD BUILDING LAND may be obtained at Harrow, near the Railway Station, with first class free railway pass, on most advantageous terms.—Apply for prospectus and plans to JOHN BENNETT, Esq. 35 Ludgate hill, Secretary to the Harrow Freehold Land Society.

TO BUILDERS, BUILDING SOCIETIES, or GENTLEMEN, seeking sites for the erection of Villa Residences.—TO BE SOLD, about 24 acres of valuable FREEHOLD BUILDING LAND, situated on an eminence, adjoining the borough of Reading, beautifully ornamented with timber, and commanding a rapid rise in value. It has a frontage of above 3,000 feet to fine roads; and being within a few minutes' walk of the borough, enjoys all its advantages, although free from all borough rates.—For particulars, apply to Mr. LEDIARD, Reading, Berks.

ARLINGTON-PARK BUILDING ESTATE, CHISWICK. To BUILDERS and OTHERS TO BE LET, on building leases, for ninety-nine years, at moderate ground-rents, very eligible PLOTS for the erection of detached or semi-detached villa residences. There is a great demand in this neighbourhood for large villas, which is enhanced by its near proximity to Chiswick and Kew Gardens, the Kew-bridge, and Chiswick Railway Stations, and the Great Western road. The soil is gravel. There is excellent water and good drainage. Building materials of every description may be obtained from wharfs on the Thames, at a short distance.—Plans may be seen and particulars obtained by applying to H. E. KENDALL, Architect, 17, Suffolk-street, Pall-mall East.

LAND TO BE LET, on Building Leases, at the following places:—Sydenham (nearly 20 acres), Dulwich Park, Cordon, Hailsham (near the Bark-on-road station), Homerton, Chertsey (close to the station), and Acton. Apply to Mr. W. P. LOW, 67, Wimpole-street, Cavendish-square.

Advances if required.

The Builder.

VOL. XIV.—No. 698.

FOUNTAINS were the order of the day at Sydenham, on Wednesday last, when our gracious Queen was present, to inaugurate the "great waters," in the lower grounds; and fragrant flowers, and fine weather, and flocks of fair ladies, all aided in making the day agreeable, and the sight a gay one. It is necessarily somewhat difficult to describe within reasonable limits the arrangements for a system of water-works, of such magnitude and variety as those at the Crystal Palace: we must endeavour, however, with the aid of our engraving on the next page, which shows the position of all the fountains, to give a correct general idea of the plan on which they are constructed and worked; leaving the pleasanter features of the *fête* to other pens.

The supply of water for ordinary purposes, and for provision against fire, within the Crystal Palace and through the grounds, is comprised in these waterworks. But their principal object is of course the formation of the great system of fountains. Within the Crystal Palace itself are various ornamental fountains, though necessarily of lesser magnitude, as for example the bronze fountains in the basin at the junction of the nave and north transept, of which we gave a representation some time ago, and the crystal fountain, that formed so prominent a feature in the Exhibition of 1851. The others are distributed through the architectural courts.

It will be seen on the plan, that in the ornamental basins on the terrace and below it, there are two distinct series of fountains, the upper series comprising the nine basins adjacent to the main building, and terminating with the large circular basin on the central walk through the gardens; the second series including the first series, and in addition to them the more extensive fountains in the temples, cascades, and two large basins in the lower grounds, which terminate the water supply. The upper series, or ordinary display now daily exhibited, can be worked independently of the others, but when the lower fountains are shown, the whole display is brought into action, and to effect this, it will be seen very elaborate arrangements have been found necessary. In order that these may be understood, let us first describe the arrangement in connection with the fountains of the tanks and upper reservoir, containing the supply of water for the jets, and of the lower reservoirs, where it is collected after being displayed.

The water for supplying the fountains is maintained at three different elevations;—first, in the two high tower-tanks which supply the 250-feet jets in the centres of the lower great basins, and concerning which towers we will speak more at length presently; secondly, in two lower tanks, which contain water for fountains; and for ordinary use in the building, and are situated near its northern extremity. These tanks supply also the high central jets in the upper series, as well as four secondary jets, round each 250 feet jet in the lower grand basins. The supply at the third elevation is contained in the large upper reservoir at the northern end of the building. This reservoir contains about six and a half millions of gallons, and from it the great body of the water displayed in the fountains is drawn.

To raise water from the upper reservoir into the high and low tanks above described, two 30 horse-power pumping-engines are placed near it.

For collecting the water after its display in the fountains there are two reservoirs, namely, one for the upper and one for the second series of fountains. That for the upper series (usually called the intermediate reservoir), is situated at some distance to the north of the central circular basin, and a little below it in elevation. This collects the waste water from the ordinary display of the upper fountains, which is first received into the circular basin, and flows thence into this reservoir.

Four forty-horse-power engines are placed adjoining the intermediate reservoir, which raise or return the waste water from it to the upper reservoir, so as to render it again available for display.

The receiving reservoir for the second series of fountains (which is called the lower reservoir), is situated below the south grand basin, and is of still larger capacity than the upper reservoir, as it would be required to receive all the water contained in the latter and in the high and low tanks, in the event of its being all displayed. The lower reservoir is constructed in the form of an ornamental lake, and the well-known representations of the various extinct animals, and strata illustrative of the science of geology, are placed on its eastern banks. The lower reservoir collects the waste water from the entire system of fountains when in full operation,—the waste being first received into the grand basins, and flowing thence into this reservoir; while to raise or return this waste water from the lower to the upper reservoir, so as to be again available for display, two forty-horse power engines are provided. The water, it will be seen, is thus made to play its part again and again.

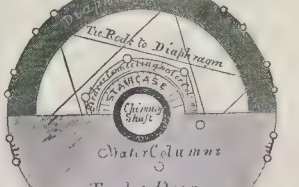
An artesian well is sunk in the lower part of the grounds for a water supply, and a small engine is provided for raising the water from this to the lower reservoir. The well consists of a brick shaft 8½ feet in diameter, and 247 feet in depth, whence a boring is sunk to the additional depth of 328 feet; giving a total depth of 575 feet. The strata, we may mention, consist of clay and sand for 360 feet from the surface, and of chalk for the remainder. And now a few words as to the fountains themselves.

The water displayed in the upper terrace fountains is conveyed through pipes to the large circular basin, where it plays a second time in the low network jets round the margin, and in the other low jets through the basin. When the lower great fountains are displayed, all the waste water from the circular basin is similarly conveyed to them to play their jets of low elevation. Thus the water from the terrace fountains is displayed thrice, and that from the circular basin twice, throughout the entire operation.

We have given a view of what is not quite correctly called a water-temple, at the head of the cascade, marked G on the plan.* In this, the water issues from a ring round a ball, upon which stands the figure of Mercury, and from the cupids' mouths thence flowing over the steps of the dome, where it is collected in a cistern formed by the cornice: the bottom of this is perforated, and lets the water fall below in the form of a curtain to the openings. Water also flows from the lions' mouths at the projecting angles of the base. Bordering each side of each cascade is a range of tazzæ, borne by figures of children, and extending nearly to H, where the water falls into the basin below, past the face of an arcade, through which there is a passage-way. Next week we shall give a general view of the grounds, which will convey a clearer idea of the arrangement to those who have not visited the place.

* See p 333.

The magnitude of this system of fountains may be conceived from the circumstance that, when the great waters are in full operation, there are 11,788 jets playing, and that the quantity of water displayed simultaneously in them is about 120,000 gallons per minute.



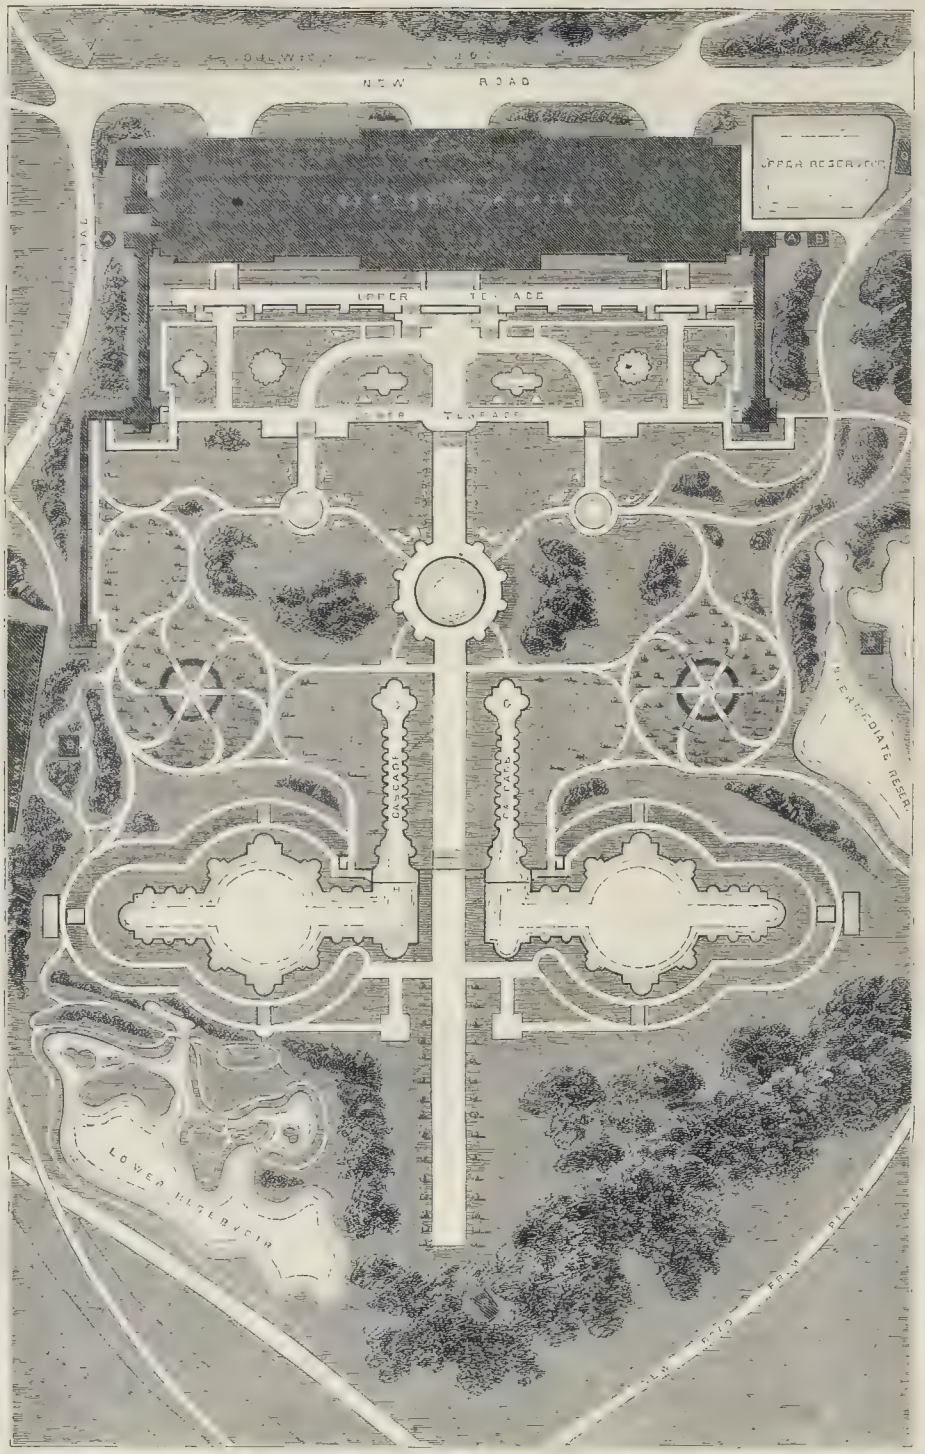
The whole of these works we must here mention were designed by Sir Joseph Paxton; and six contractors were employed under him in their execution, viz.—Messrs. Cochrane and Co.; Simpson and Co.; Easton and Amos; Aird; Cox and Wilson; and Roe. The engineering operations were executed under the superintendence of Mr. Sheilds, the company's resident engineer, and all the architectural portions were designed and superintended by Mr. Stokes.

The water-towers, which now form most prominent features in any view of the Crystal Palace, play an important part in the arrangement, serving various purposes. By their means, in the first place, a supply of water can be raised to such an elevation as to play jets of the enormous height of 250 feet in the large ornamental basins in the lower part of the grounds already referred to. The supply of water thus elevated is contained in a tank placed on the top of the towers, and is also available for extinguishing fires in the main building itself. Pipes communicating with the water-tanks are carried through the building with a number of fire hydrants placed upon them, so that in the event of fire every part of the edifice may be reached by streams of water of immense force. In the more elevated parts of the structure, which the ordinary supplies of water will not reach, this advantage would be peculiarly appreciated. We have already given some particulars of these towers;* but they are such large and costly works that we may be excused for adding the results of more minute inquiries.

A chimney shaft is carried up through the centre of the towers for the heating apparatus employed in the main building, and for the fires of the steam engines, which supply water to the building, and raise it to the top of the towers themselves. Besides serving these purposes, the towers, although somewhat heavy in appearance themselves, improve the architectural effect of the entire design of the Crystal Palace—a point of importance in a building of this character.

The towers are very solidly constructed. They are based, as we have already said, on a bed of cement concrete, and a foundation of brickwork in cement of immense strength is built on the concrete to support the external iron columns which mainly form the structure and carry the water-tank on its top. These columns stand in pairs, 3 feet apart, on the brickwork, each pair being united through their whole length by a solid iron plate or web in the 3-feet space between them. Each pair of

Half Section, showing Diaphragm, &c.



Half Section, showing Floor.

columns and web aids equally to carry the load, and forms, in effect, a single column. There are

* See p 293, ante

CRYSTAL PALACE, SYDENHAM: PLAN OF THE GROUNDS AND WATERWORKS.

AA. Water-towers. BBB [illegible] Waterfall. D. Refreshment. EE. Wings. F. Railway Colonnade. GG. Water. HH. Arcade.

twelve of these compound columns, each finished with a broad bearing plate across the top and bottom, the bottom bearing plate resting on the brick foundation, and the top plate receiving and supporting the underside of the tank. These towers are polygonal in plan. Each compound column presents externally a flat surface; and between them is a second flat surface about double the width of the first. The towers thus present twenty-four faces, which, measuring from the centres of columns, are alternately 4 and 8 feet wide. The diameter of each tower is 47 feet. The annexed horizontal section will serve to explain further their construction.

Vertically, the compound columns are fixed in lengths of 3 and 17 feet alternately, the top length immediately under the tank being 3 feet. Between each compound column is a clear space 7 feet wide. These spaces are occupied partly by iron girders and partly by glazing. The iron girders are fixed between the 3-feet lengths of the columns, and thus form a solid ring of iron 3 feet deep round the towers at each of these intervals. The glazing occupies the spaces between the 17-feet lengths of columns, and there are also strong diagonal tie-rods between the compound columns fixed in these spaces of 7 by 17 feet.

The girders and tie-rods last mentioned thus unite the external surfaces of the towers, rendering them, as it were, a sort of tube. But internal supports are also requisite to stiffen the external surface in the same manner as the floors of a house stiffen the walls. This is effected by fixing internally, at each 20 feet in height, a horizontal diaphragm or ring of plate iron. These rings are 5 feet wide, being 36 feet internal and 46 feet external diameter. Their outside edges are attached to the columns, and their inside edges are strengthened by angle iron, and drawn tight by horizontal tie-rods. The brick chimney-shaft is built in the centre of the rings last referred to, and of the tower. It is 9½ feet external diameter, and a winding staircase round it gives access to the top. A floor and landing of timber are also fixed at every 20 feet in height across the space between the chimney-shaft and external columns. The timber floor is placed at the top, and the iron diaphragm or ring at the bottom, of each 3 feet length of the columns.

The arrangements for the water supply will now be easily understood. Six water columns are erected within each tower round the shaft, rising through the open spaces between the shaft and the iron diaphragms, as well as through the floors. Five of these are connected directly to the bottom of the tank, and they serve to convey the water either upwards from the pumping engines to the tank, or downwards from the tank to the high fountain pipe, or to the pipe which passes through the main building. The sixth water column acts as an overflow pipe to the tank.

The five water columns which convey the supply are connected by outlets at their bases to a horizontal pipe laid round the basement floor of the towers. This pipe is connected at one end with the pumping engines, and at the other with the pipes to the high fountain and the building. The communication of the water supply in either direction is effected by an arrangement of sluice-cocks on the pipes. All the six water columns are erected in 3 feet and 17 feet lengths, corresponding to those of the outside columns, and are connected to each other by girders and tie-rods at each 3-feet length.

These columns, however, carry no portion of the weight of the tanks, as their expansion and contraction from changes of temperature would (from their containing water and being protected from the weather) be so different from that of the outside columns, as to render a similar employment for them inadmissible. The tanks are therefore entirely supported on the external columns. They are circular in plan, having their bearing round the outside circumference. Their bottoms are dome-shaped. They are 47 feet in diameter, and 38 feet in extreme depth, and are capable of containing about 300,000 gallons, or nearly 1,400 tons of water each!

The chimney-shafts are conveyed through openings in the form of a tube, made for them in the tanks. A gallery supported on brackets is carried round the base of each tank, and from this magnificent views of the neighbouring country are obtained. The structure is finished by an ornamental roof, which covers the gallery and the tank. The extreme height of these towers from the ground is 282 feet. The top gallery, which is the highest point of the Crystal Palace buildings made attainable to the public, is at an elevation of 550 feet above the level of high water in the Thames. We have only to add to this description, that there were employed in the construction of these towers about 2,000 tons of iron, besides various other materials, and that in the whole about *thirteen miles* of pipes have been laid, ranging from 36 inches in diameter downwards; a large proportion, perhaps one-half, being above 20 inches.

On Wednesday, when the whole of the waters burst forth simultaneously for the first time, and the sun shone, and the Queen came, and the people cheered, the effect was admirable: it was a scene that will not soon be forgotten by those who were there to see. Schlegel says truly,—"The soul needs a certain amount of intellectual enjoyment, to give it strength adequate for the daily struggle in which it is involved;" and we know of no place where this may be more completely obtained than at the Crystal Palace at Sydenham.

ON THE BRIDGES AND VIADUCTS OF THE PRESENT DAY.*

THE CRUMLIN VIADUCT, &c.

My own professional engagement in the locality enables me to enter more at length into the description of the Crumlin Viaduct, situated on the Newport, Abergavenny, and Hereford Railway Extension, which, with the exception of the Aqueduct of Spoleto and the Portage Timber Viaduct, in the United States, exceeds any other structure of the kind in height. It is a remarkable example of the modern application of iron to such purposes. The dimensions are as follow:—Total height from the bed of the river to the level of the rails, 200 feet; the piers from centre to centre, 150 feet; actual bearing of girder, 148 feet; the total length of viaduct, 600 yards. There are altogether ten spans or openings, but they are unequally divided by a tongue of land on which are placed masonry and earthwork, about 50 yards in length, making in reality, as far as the ironwork is concerned, two separate viaducts. The larger viaduct has seven spans and six piers; the smaller one, three spans and two piers. Excepting the height of the piers from the level of the valley, the two are precisely similar, and it will be necessary only to allude to the larger one. The piers are formed of clusters of cast-iron columns, placed in stages. Each column is 17 feet long by 1 foot in diameter, cast hollow, the thickness of metal, varying from 1 inch to ⅞, diminished within, the same external diameter and form of column being preserved throughout. The number of columns in each stage is fourteen, and they are arranged on plan, in the longer direction, in four rows of three each, with one standing singly at each end of the piers, which gives it a salient angular outline. The width between the columns at the base of the pier measures 13 feet 6 inches in every direction, taken on the square, excepting between the centre rows, where it measures 6 feet throughout the height. The pier gradually diminishes to the top of the columns below the girders, where the dimension 13 feet 6 inches is reduced to 9 feet, and at the external angle columns to 2 feet. The dimensions of the piers at the base are between the centres of the columns 60 feet by 27 feet, and the upper dimension is 30 feet by 18 feet, giving a diminution of 30 feet in one direction, and of 9 feet in the other. To effect this, nearly all the columns are more or less inclined, and the two centre are the only upright ones. The four columns at the corners, forming the square of the piers, lean diagonally, 4 feet 6 inches. The six intermediate columns correspond, but lean each in one direction only. The two single outside columns are most inclined, being 11 feet 6 inches out of the perpendicular, forming a raking brace. The top of each stage of columns is connected by horizontal cast girders, 1 foot deep, with 5-inch flanges, bolted together. There are also horizontal and vertical wrought tie rods. The former are circular, and 2 inches diameter, and the latter flat bars, 4 by ¾. They are tightened with wedges where necessary. The columns are fitted together with socket joints, a projection of half an inch being left on the top of the cap, which fits into the base of the column above. These are held together by four ears cast on the top and bottom, which are fixed with bolts and nuts. The joints of the columns are planed and fitted together with the greatest nicety to ensure a perfect bearing. The base plates upon which the columns stand vary from 3 feet to 5 feet in height, and have a plate 3 feet square resting on the masonry, into which they are joggled, plugged, bolted, and put together with sulphur joints. The number of stages of columns to centre piers, it will be perceived, are ten, without base plates. The upper stages of the columns are connected together at top by stronger horizontal girders than those below. They are finished with A-shaped, or triangular trusses, placed over each row of columns below, upon which the girders rest. It should be mentioned that the foundations for the piers are formed of solid, flat bedded, and jointed masonry: they were generally carried down to the solid rock, and vary from 10 to 3 feet in depth. The largest blocks are placed immediately under the base of the columns, and so arranged as to distribute the weight below as much as possible. The girders are formed of wrought-iron, after Warren's patent. This consists of a stout beam above, and a bottom tie below, with diagonal filling in, the whole being supported by the top beam on the principle of an inverted truss: the mode of execution, however, differs much. The girders at the Crumlin are 150 feet long, and 14 feet 6 inches deep, outside dimensions. The dimension of the top tubular beam is 14½ inches by 9 inches; the average thickness of the plates being, the sides an inch, the top and bottom half an inch. The sides have flanges formed on the edges, which are rivetted to the top and bottom plate. Extra stiffening pieces are carried along the bottom, and likewise the joints and where the bolts cross. The ties at the bottom of the diagonals of the girder are formed of a series of four wrought bars, 6 inches by ⅝-inch average, placed in pairs 3 inches apart in the centre, to admit the diagonals and packing, and showing a 4-inch separation on face; the whole forming a square combination measuring 16 inches by 7 inches: these bars reach from diagonal to diagonal, where they are all four joined with a plate 16 inches deep, and bolted with five ⅞-inch rivets to each. There are eighteen diagonals to each girder, which act as struts and ties until they gradually approach the centre, where they act as both. The diagonals do not cross each other, as is the case in the lattice girder, but are both fixed to the top beam and bottom tie with large bolts 3½ inches diameter; and it is on the care and security with which these parts are connected that the chief strength of the girders depends. The diagonal ties and struts present a different section, the main strut being of a cross shape, measuring 10 inches to each extremity, cut out of ⅝-inch plates, with four 5-inch L angle pieces rivetted. The ties are formed of two flat iron bars 9 inches by ½-inch, which lap the struts, where they are rivetted, top and bottom. The ties near the centre, extending two on each side, are strengthened by smaller pieces of T iron, to enable them to act in some measure in

* See page 328, *ante*.

the double capacity of ties and struts. The part of the lower beam or ties between the four centre strains of diagonals is strengthened by an additional bar 4 inches wide, filling the space between the other bars, and rivetted like them to the junction plates. The whole girder is gradually strengthened by an additional thickness of plates towards the centre, given by a close calculation of the forces required to be resisted. The side plates of the girder and ties diminish from 1 inch in the centre to $\frac{5}{8}$-inch at the ends. Each pair of girders is connected at each of the large bolts or pins with a 5-inch cast-iron hollow bar, with $\frac{1}{2}$-inch thickness of metal. The bolts are passed through the ties, diagonals, and packing pieces, leaving the heads outside, the ends of the pin projecting about an inch: the end is then covered with a cast-iron cap, which is screwed or bolted with a $1\frac{1}{2}$-inch screw into the centre of the pin, to prevent the same from drawing out. This affords a means of connection with the cast-iron bars by corresponding flanges, which are firmly bolted together. The bearing of the girder, by which the whole is sustained, is worthy of particular notice. It is held by the ends of the *upper beam only*, the lower one dropping in a state of suspension: the weight thus entirely rests on the last pin, which passes through the outside diagonal tie. The top of the angular termination of the piers is furnished with a casting 3 feet 6 long and 5 inches wide, on the upper surface of which is a flat sinking $\frac{3}{4}$-inch deep. Under the ends of the upper beam are placed cast-iron blocks, hollowed out on the upper surface to receive half the diameter of the pin, and of sufficient depth to raise the bottom flanges of the beam clear of the sliding groove. This block has perfect freedom of play backwards and forwards, to suit the expansion and contraction of the girders, as affected by the temperature of the atmosphere, or the superincumbent weight: for this purpose a space of 9 inches is likewise left clear between the ends of the beams. The ordinary expansion and contraction in summer, between midday and midnight, does not exceed $\frac{1}{4}$ of an inch. The girders have been tested with a weight of 250 tons each, which produced a very slight deflection; and were the viaduct loaded with locomotives, this would be seven or eight times as much as could be put upon them. The struts have also been tested with a crushing weight of 250 tons. The roadway is formed of 6-inch planking, bolted to the beams, and it is intended that the rails should be laid on strong longitudinal framed sleepers. An ornamental cast-iron balustrade is fixed on each side of the roadway. The whole viaduct is not straight on the plan, the approaches to the larger one being curved, to which the last spans of the viaduct accommodate themselves by a slight inclination southwards at the extremities. This viaduct has been described as one of the engineering wonders of the day; and it may be mentioned that another, projected by the same engineers, is of much greater height. Messrs. Liddell and Gordon, engineers; Mr. M. W. Carr, resident engineer; Messrs. Kennard, contractors.

The Sitter Viaduct, on the St. Gall and Appenzel Railway, an account of the completion of which has just appeared,* is one of similar construction, except that the girders are lattice. It is close upon the same height, and has four spans, the two centre being 138 feet, and the two side ones 130 feet; but, on the whole, is a work of less magnitude than the Crumlin.

The Newark Dyke Bridge, crosses in one span a branch of the Trent at an angle so oblique as to render it necessary that the girder should be 240 feet 6 inches long, whilst the width, measured on the square between the abutments, is only 97 feet 6 inches. This is also one of Warren's patent, but differs materially from the Crumlin, inasmuch as the top tube and the parts compressed are of cast iron. Each line is carried by a pair of girders 13 feet apart, between which the trains run. The top tube or strut is composed of twenty-nine cast-iron pipes, 13 inches diameter, the thickness of metal $1\frac{1}{2}$ inch. The ends of these are turned and nicely fitted together and bolted: the cast iron struts are of the form of a Maltese cross. Each girder weighs 122 tons 10 cwt.; the whole bridge, including the platform, 589 tons. The deflection caused by two heavy goods engines, travelling both fast and slow (60 tons weight), was $2\frac{1}{2}$ inches. This bridge was erected before the Crumlin, and although the span is greater, the preference must be given to the latter, as being composed entirely of wrought iron.

Chepstow Bridge, over the River Wye, by Mr. Brunel, is a remarkable example of the combination of the tube and girder, to which may be added a third principle, that of suspension. The whole length of the bridge is 623 feet, one-half of which is crossed by a viaduct girder of three spans, the remaining portion by a single span of 296 feet. The central pier is composed of six cast-iron cylinders 8 feet diameter below, and placed in two rows of three each: the viaduct piers are in single rows of three in each. Two girders, of uniform depth throughout, carry each line of rails: those above the roadway are perfectly distinct, and do not depend upon each other. 50 feet above the large span a circular tube 9 feet diameter is placed, from which the roadway to each is suspended. This is done by two vertical frames of wrought iron, dividing the girder into three spaces, the centre the widest, the spaces braced with cross chains put together in links similar to suspension bars. The main chains hang from the tube at the ends over the pier to the opposite corner at the level of the roadway, where they are joined across the centre on both sides of the girder, and the middle space is crossed by chains both ways, which gives additional security to the centre of the girder. The tubes are carried at each end on seventeen rollers, 5 inches diameter, which allow for expansion and contraction: the diameter of the pins which carry the leading chains is 7 inches. The girders are formed of single wrought plates, with top angular casing 3 feet wide, and a curved bottom flange. This girder is made strong enough for the 100 feet spans; and over the space three times that width, it will be perceived that it is supported in two intermediate parts, so that in reality the girder has very nearly the same bearing throughout. This is an extremely ingenious arrangement, the sectional quantity of material used with reference to the span being less than in any like structure. But it is to be regretted that from its want of symmetry and its lop-sided appearance, it is by no means an agreeable design. The Great Saltash Bridge is on the same principle, with four spans, the two principal not less than 445 feet.

The objection to combination girders does not apply to those made all of wrought iron. In cast iron the girder is broken by the first deflection, but no mischief is done to wrought before the trussing-bars or suspension-rods are called into action.

The Boyne Bridge, on the Dublin and Belfast Railway, is one of the finest examples of the lattice girder which has hitherto been executed. The main span is 264 feet between the bearings: the two side spans 137 feet. At the end next the town of Drogheda are thirteen arches of masonry of semicircular form, 61 feet span. At the other end are three similar ones. These are built of finely-wrought stone. The height of the bridge above water-mark is 100 feet, allowing the passage of shipping without striking top-gallant masts. The depth of the lattice girder is $22\frac{1}{2}$ feet. It is formed of top and bottom wrought tubular chords: the area of the top chord where the greatest strength is required, is 265 inches, where the least 137: the lattices are placed on each side of the chord at an angle of 45 degrees, 7 feet 6 apart, forming double squares in height: the sizes vary from 10 inches by $\frac{5}{8}$ to 4 inches by $\frac{5}{8}$, according to the strains: they are closely bolted to cross braces at the intersections. There is a double line of railway, with the girders on the outside, measuring 24 feet 6 inches on the clear: the roadway is supported on cross beams, also on the lattice principle, 7 feet 6 inches apart, covered with 6-inch planking bolted down. The girders being joined over the piers form one length, and are fixed only on one pier; the other supports being the usual rollers working in grooves to admit of expansion. Sir J. M'Neil was chief engineer. Mr. Burdon and Mr. Barton (to the latter of whom I am indebted for much information on the subject) were the resident engineers.

It will be perceived that the principle of the lattice girder does not materially differ from that of the large tube, the sides of the former being open with lattices where material is not so much required. With the same weight of metal the lattice girders will carry a greater load than tubes. The comparative duration has not yet been ascertained, but the lightness and elegance of appearance, and several other considerations, are greatly in favour of the lattice bridge. For further particulars useful reference may be made to notes of the comparative strength of the tube, warrens, and the lattice girder, by Mr. James Barton, C.E. Various opinions have been also given by eminent engineers, which will be found in the "Transactions of the Institution of Civil Engineers."

In forming a comparison of the materials to be used for any particular work, whether a bridge or a viaduct, many questions have to be taken into consideration, but none more important than that of economy. To arrive at that, the original outlay and the probable durability must be taken into consideration; and from what has hitherto taken place, the conclusion arrived at appears to be in favour of wrought-iron; but it should also be noticed that metals can be destroyed by repeated vibrations, which have a tendency to separate the particles of which they are composed. As a sufficient excess of strength should be provided, this objection does not detract from the value of the material, while it demands additional skill and ingenuity on the part of the constructor.*

* See p. 271, *ante*.

ARCHBISHOP WHITGIFT'S HOSPITAL, CROYDON.

AT the third annual meeting of the Surrey Archæological Society, held at Croydon on the 12th inst. a descriptive account of Whitgift's Hospital, by Mr. W. Pettit Griffith, was read. The following is the substance of it:—

Among the many interesting public buildings in the town of Croydon and its suburbs, this hospital ranks as the most important charitable institution, and offers an example of ancient domestic architecture, illustrating the hospitals, schools, and almshouses of the Middle Ages in England.

On the 29th of March, last year, the Court of Chancery sanctioned a scheme for the better management and regulation of this interesting and important charitable institution, and as alterations may from time to time be effected, it may be useful to place on record a more detailed account of the building than has hitherto been attempted.

Archbishop Whitgift, the founder, having obtained letters patent for building this hospital, with license of mortmain from Queen Elizabeth, dated the 22nd of November, 1595, in the thirty-eighth year of her reign, purchased the following lands for its site: the Checker, in Croydon, cost 200*l.*; a tenement adjoining, cost 30*l.*; and another tenement in Croydon, called Stay-cross, with one acre and a half, cost 80*l.* Upon the ground previously occupied as above, the hospital was constructed, and was therefore not rented.

The Rev. Samuel Finch, vicar of Croydon, in letters to the Archbishop of Canterbury and Mr. Woormall, of Lambeth, written in 1596 (which are preserved in the Lambeth MS. Library, No. 275, and printed *in extenso* in Ducarel and Steinman's Histories of Croydon), entered minutely into many particulars respecting the erection of the hospital.

The bricklayers' work was executed for 1s. 2d. to 1s. 4d. a day; and the labourers were paid 11d. a day. The sand was procured from Duppa's-hill, as it could not be obtained from the park. The foundations were formed with brick, chalk, and large flint; small flint being used for filling in. These materials were properly laid, not in a confused manner, but "orderlye," and "rammed stronglye, course upon course, stronge and sure." Four loads of flint cost 10s. which saved 1,000 bricks at 16s.

* This paper was read, as we mentioned last week, at the Institute of British Architects. The closing meeting for the session was held on the 16th: we defer our report.

The masons employed were Nicholas and Christopher Richardson, citizens and freemasons of London, and Gabriel Anscombe, of Charlton, yeoman, who were bound to Samuel Finch, John King, and William Tagbourne, in 100*l.* to execute the works. The bond bears date the 19th of February, A.D. 1596. In this agreement they are bound to procure so much good and seasoned freestone as shall be sufficient for the doors and windows belonging to the said intended hospital. The doors were to be wrought "fayre and comelie," and the windows with "bowgeworke." The whole to be completed at 9d. the foot for the windows, and 10d. the foot for the doorcases.

The foundations were begun on February 14th, 1596, and, as the workmen were digging them, several skeletons were discovered: these were, in all probability, says a writer, the remains of the Londoners, who, flying from the battle of Lewes, where they had taken part with the barons against Henry III. were intercepted at Croydon on the 14th of May, 1264, by a detachment of the king's forces, who put them to the sword with great slaughter.

On March the 22nd, 1596, the founder laid the two corner-stones, north and south. "The 27th of June the first of all the hospital was reared, and the 6th of September the last of the same was reared; and, the 24th of September all the outworke, as tyelinge, &c. was (God be praysed) fully finished, A.D. 1597."

"Trees were sett in the hospital outyard, Decr. 1599, and in March, 1603, thirty-two elmes and ashes were sett at the hospital."

The Rev. Samuel Finch, then vicar of Croydon, was the person employed by the archbishop to make contracts, to overlook the workmen, and to see them put his intended plan into execution. This he performed with very great care and diligence, paying them regularly every week: the total amount of which to September 29th, 1602, was the sum of 2,716*l.* 11s. 11d.

This hospital is endowed with lands for the maintenance of a warden, schoolmaster, and twenty-eight poor brethren and sisters, or a greater number, not to exceed forty, if the revenues should admit of it. The schoolmaster, who is likewise chaplain, is allowed by the statutes 20*l.* per annum, the warden 11*l.* and the other members 5*l.* each, besides wood, corn, and other provisions. The nomination of the brethren and sisters was vested by the founder in his successors in the see of Canterbury, whom he appointed also to be visitors. Whenever that see shall happen to be vacant, the rector of Lambeth and the vicar of Croydon are to fill up the places. The persons to be admitted must be sixty years of age at least; inhabitants of Croydon and Lambeth are to be preferred. Among the crimes to be punished by expulsion, are "obstinate heresye, sorcerye, any kind of charmmynge, or witchcrafte."

The lands with which the hospital was endowed were of the annual value of 185*l.* 4s. The estates have been much improved, and the revenues of the hospital farther increased by various benefactions.

The hospital is square in form, and has a court in the centre converted by the poor brethren into flower-gardens; it is situated on the east side of the high street on the London side of the town. Over the doorway are the arms of the Archbishopric of Canterbury, surmounted by a mitre in bas-relief. In the frieze of the pediment is inscribed, "Qvi Dat Pavperi Non Indigebit." The buildings are in the old English style, constructed of red bricks, with black glazed bricks in the principal front, forming the initials of the founder, diagonal squares, &c. with the foundations of flint; the muntins jambs, &c. of windows, quoins of building, &c. are of stone, and have been disfigured with cement. The labels over the windows in the quadrangle are of moulded red bricks, worthy of notice. The principal front remains as in the print engraved in 1755 (published in "Queen Elizabeth's Progresses"), with the exception of the removal of the clock, which projected into the street, and the bell-turret over it on the roof.

With regard to the clock and bell, W. Drummond, esq. of Croydon, kindly permitted me to make the following extracts from a copy of an old memorandum-book formerly belonging to Dr. Rose:—

"Mr. John Shaw, clerk of the Chamber of London, gave the dial."

"The clock to this hospital was removed in 1810 for a double purpose, thro' a fear of the roof falling in where it then stood, and to remove the dial on the inside of the quadrangle, for the greater convenience of the poor."

When the bell was taken down the following inscriptions were found upon it:—

"Decani Dalyson Ecclesiæ beatæ oremus pro bono Statu Mariæ de Lincolne.

"Thomas Dalyson Miles firmarimus hujus Manerii de Gretwell me fieri fecit quarto Aprilis, Anno Dmi. 12 . ."

This bell is therefore about 600 years old: "the rest of the date is obliterated either by the continual striking of the clapper or the friction of the rope. It is now so placed that the inscription cannot be damaged."

The memorandum-book above mentioned also alludes to several gifts presented soon after the foundation of the hospital. John Parker, Neville dean of Canterbury, and Mr. Brackenburie, each gave a cup of silver. Mention is also made of houses at Northampton, bearing the date of 1595. Over the outer gate in an upper room called the Treasury, are deposited (in boxes which once were remarkably strong and secure) a variety of papers relating to the hospital; viz. purchase-deeds of the estates in the neighbourhood, leases, licenses, &c. The more curious and valuable are Queen Elizabeth's original grant to the founder, and the archbishop's deed of gift of the several estates with which he endowed this hospital. They are both on vellum; the first neatly endorsed, and the margins beautifully ornamented with a drawing of the Queen in her robes, sitting in a chair of state, and the royal arms in different compartments. The other instrument is written in a very fair legible hand in English: the beginning is embellished with a drawing of the archbishop in his robes; the margin contains the arms very highly illuminated. These drawings are engraved in the Appendix to Ducarel's History of Croydon, and other papers relating thereto.

The principal objects of interest connected with this building are the chapel, the hall, the kitchen, and the founder's room.

The chapel was dedicated by the name of "The Chapel or Oratory of the Holy Trinity," on the 10th of July, 1599, by the Bishops of London and Chichester. It is situated in the south-east angle of the quadrangle, and is very neat and curious. The eastern window is Perpendicular, in three lights, and contains, in painted glass, the arms of the archbishopric of Canterbury, impaling Whitgift; viz.—Argent, on a cross fleury sable five bezants. Over this window, externally, is the following, inscribed upon a stone tablet,—"Eboracensis hanc Fenestram Fieri Fecit, 1597." On the walls of the chapel are suspended many objects of interest; on the east wall is a framed tablet, containing seven commendatory verses, to the memory of the founder, and also a board containing a Latin inscription, describing the miseries of human life. On the north wall is a wooden tablet with a pediment, containing select Latin sentences, surmounted with "I. W." united by a knot, and dated 1600. Also a portrait of one of the founder's daughters who died in 1616, aged 38, dressed in the costume of Elizabeth's time; and an outline delineation of Death as a skeleton and grave-digger. Attached to the south side of the chapel is an ancient oak tablet with a pediment, containing the Commandments, supported by Moses and Aaron, in semicircular-headed panels. Affixed to the west wall is an excellent portrait of the founder, surmounted by his arms and motto, with Latin inscriptions. He is standing at a table, containing an open Bible, bell, watch, seal, inkstand, knife, pens, &c. all minutely painted.

On each side of the chapel are oaken stall-seats with carved finials, 2½ inches thick: these seats were finished on Feb. 5th, 1598, and arranged each side of the chapel from west to east, leaving a central passage.

The hall is the next object of interest: it is in the north-east angle of the building. The windows on the west side contain quarry lights, with fragments of stained and painted glass, with the founder's motto upon a coronet,—a shield with the royal motto, a mitre and cross, with the motto "Deum." On the east side the windows contain the arms of "Edwardus Aysworth, anno 1598," and stained glass inserted in 1851. The hall has a fire-place, containing the dogs for burning wood; also an ancient oak table, given "to the poore for ever," and very substantial benches. Upon the table is an interesting black-letter Bible of 1595, repaired at the expense of Thomas Lett, of Lambeth, in 1813, and again in 1851. An ancient chest, bound with iron, containing the plate, used to stand in the hall: it is now in the treasury over the outer gate.

Adjoining the hall is the kitchen, connected by a large Tudor arch: beneath the latter is a smaller arched communication. In this room is an oak seat, panelled and inscribed as "The gift of Edward Chapman, 1816:" it formerly stood in the outer gateway. There are also several curious recesses in the walls, another oak seat, and objects of interest.

Immediately over the hall is the founder's room. In this room is an oak table, now worm-eaten, at which the archbishop has often dined; and it is stated that Queen Elizabeth has also dined at this table. On the south side of the room is a curious and elaborately-carved oak Elizabethan chimney-piece, with the founder's arms in the centre. The walls of this apartment, and the room adjoining south (now the warden's), are lined with wainscoting, 7 feet 5 inches high: the doors are worth notice.

Lysons, in his "Environs of London," alludes to "three antique wooden goblets," belonging to the establishment: one of them, which holds about three pints, is inscribed with the following legend:—"What, sirrah! holde thy pease; thirste satisfied, cease."

There are at present nineteen brothers, eighteen sisters, and a warden and schoolmaster, and their dwellings are arranged on each side of the quadrangle, and are of good and convenient size.

In 1848 were erected, at the east end of the hospital grounds, houses for five additional members. The funds were raised without any burden on the existing members of the charity. All new members had their stipends fixed at 40*l.* a-year, instead of taking an equal share of the revenues; and the difference between the above allowance and the share was funded until a sufficient sum was raised.

The new applicants were, of course, happy to commence with 40*l.* a-year, and the stipends of the old members were unaltered. After the requisite sum was provided, all the inmates were restored to an equal participation of the revenues.

The following is a list of the chaplains, from the foundation of the hospital. Ambrose Brydges, A.D. 1600; John Ireland, 1601; Robert Davies, 1606; William Nicholson, 1616; John Webbe, 1629; Thomas Gray, 1651; Wm. Crowe, 1668; John Sheppard, 1675; John Cæsar, 1681; Henry Mills, 1711; Sam. Stewely, 1742; John Taylor Lamb, 1752; James Hodgson, 1774; John Rose, 1801; John Collinson Bissett, 1812; George Coles, 1843, the present chaplain.

Like most of our charities, this hospital has not been exempted from abuses; some of them are explained in a pamphlet printed in 1813, entitled "An Account of the Proceedings and Evidence on a Writ of Enquiry executed before the Sheriffs of Middlesex and a Jury, on the first day of November, 1813, to ascertain the Damages due from the Rev. John Rose, D.D. unto the Warden and Poor of the Hospital of the Holy Trinity in Croydon."

Prior to 1855 the management of this hospital was conducted by the brethren, who kept their own cash in a chest, and divided the revenues among themselves. They also determined the terms of their leases, and regulated all other matters in connexion with the charity; and although the original intention of the founder embraced a school for the rising generation, as well as an asylum for the declining, still the school (from its being considered to be simply a classical school, and therefore not desirable in modern times for poor children), had fallen into complete disuse. A deputation, consisting of the Vicar of Croydon, the churchwardens, and John William Sutherland (a magis-

trate), and several gentlemen and tradesmen of Croydon, waited on the Archbishop of Canterbury, on January 21st, 1853, and presented a memorial suggesting a mode by which the school might be restored and rendered subservient to the requirements of the present age. The Archbishop of Canterbury gave ready attention to the memorial, and the brethren of the hospital lent their aid, and on March 29th, 1855, a new scheme for the management and regulation of the Hospital, received the sanction of the Court of Chancery.

Under this scheme, all brethren hereafter appointed are to receive stipends not exceeding 40*l.* nor less than 30*l.*; and all sisters hereafter elected are to receive such stipend, not exceeding 30*l.* nor less than 25*l.* The surplus revenues which will accrue, together with all future increase of rents, are to be applied towards the establishment of two schools (in connection with, and as part of the foundation). One is to be a "Commercial or Middle School," suited to the educational requirements of the sons of tradesmen, professional men, and gentlemen of humble means; and the other school is to be for the sons of the working classes, after the plan of national schools. And it is considered that, from the increasing value of the Hospital estates, and the short time in which many deaths of members take place, on account of the advanced age (60 years) at which they are admitted, it will not be many years before this new scheme will produce a most satisfactory result, viz.: the restoration or addition to the present asylum, of valuable and eminently useful scholastic establishments, affording opportunities to boys of acquiring a sound, religious, moral, and useful education, which verifies the saying of Boyse Sisi, ambassador from France at the time of the Archbishop's death, that—"The bishop had published many learned books, but a free school to train up youth, and an hospital to lodge and maintain aged and poor people, were the best evidence of Christian learning that a bishop could leave to posterity."

THE ARCHITECTURAL ASSOCIATION.

SEVERAL discussions have taken place lately on the position of the Architectural Association, and the steps which should be adopted. At a meeting on the 2nd of May, Mr. Rickman moved a string of resolutions, the fourth of which went to declare that the Association had been virtually renounced by both the elder and the younger members of the profession, and that there were "sufficient reasons for at once taking the requisite measures for dissolving the society." The meeting, however, gave evidence that there was still vitality in the Association, and by show of hands negatived the proposition. On the 30th of the same month, Mr. Arthur Allom read a Paper on "The Past, Present, and Future Condition of the Young Architect;" in the course of which he traced the progress of the Association, showed what it had done, and combatted the opinion of those who consider there is no necessity for two architectural societies in London. The reader protested against the apparent jealousy of the society in some quarters, and at the same time deprecated the strong expressions made use of occasionally in the rooms of the Association with reference to the Institute of Architects. The reader further said, he should like to see the various societies for the study and development of architectural art amalgamated into one grand Institution,—not absorbed into the Institute, but holding their meetings in one building. A long discussion ensued, and, at the close, the chairman (Mr. Charles Gray) stated, that he proposed to bring forward at the next meeting a series of resolutions relative to the management of the Association.

In the course of the evening, reference was made to the report in these pages of the discussion some time ago, at the Institute, as to the diploma question and the Association, and it was suggested that the *Builder* had displayed an *animus* against the Association. Can it be necessary for us to deny such an assertion? an assertion which could only have proceeded from forgetfulness, want of knowledge, or desire to misrepresent. From the first hour of its establishment, the Architectural Association has had our sincere support, and we have ever borne most willing testimony to the good which has proceeded from it. At the present moment, in anything that can serve it, it may command our aid. As to the mendacious and scurrilous pen which has elsewhere perverted the truth in connection with the Association, to serve its own purposes, as it has often done before, we leave it, for the present, to the contempt which it cannot fail to engender in the mind of every honest man who will take the trouble to look to the facts.*

The Council of the Institute, anxious, probably, to show their sympathy with the objects of the Association, and their desire that, should the Association be dissolved, as was at one time contemplated, the impression of antagonism should be removed, either have addressed, or are about to address, a letter to its committee, suggesting amalgamation, and pledging themselves, we believe, to aid in arranging all such opportunities for artistic or literary exercises as may be desired. We offer no opinion on the proposition: it will be for the members of the Association to consider it, and decide for themselves. They may believe, however, that it was drawn up in the best spirit, and in that same spirit they will, doubtless, receive and discuss it.

* Since the above was set up, we have received a letter from the member from whom the suggestion of ill feeling on our part towards the Association proceeded, stating, that information obtained by him at the Institute has altogether exonerated us from the slightest imputation of such a feeling; explaining the means by which he had been led into the error; and expressing his intention of taking the earliest opportunity of relieving the *Builder* from the charge of misrepresentation hastily made against it. The letter is marked "private," or we should have allowed the writer to speak for himself. We have also received a letter from the chairman of the meeting, Mr. Gray, repudiating in the strongest terms an untrue remark attributed to him.

CONTRACTORS IN GROSS.

WITH reference to the article, headed a "Treatise on Building, by Contract," in your paper of the 31st of May, in my mind it requires no logic to clearly prove, both in an economic point of view, as well as in a mercantile and artistic, the many advantages to all parties, in the original mode of giving away contracts, when compared with the present monopolising and demoralizing system which, if continued, will ultimately degenerate the different trades in the building and other lines. It is a fact beyond contradiction, that of all the public and other buildings of the past ages, which we view as landmarks of architectural beauty, each trade had the control and benefit arising therefrom, in their own department, which benefit now goes into the pocket of the monopolising contractor, who cannot possibly be as good a judge as each separate tradesman; nor is the work done so well or cheaply, as when we had our Bernasconys, Browns, and Palmers, of London, in their line; and the different master masons, stone-cutters, slaters, carpenters, stucco workers, painters, and plumbing employers, who by this corrupt system are all but extinct, as they had either to retire from business, die in despair, or become inmates of the poorhouse, and that from the way their separate trades were encroached on by the present corrupt system. This mode offers no object of emulation, nor any hope or opportunity for the sons of each tradesman in his particular line to learn his business, as was formerly the case under the old system, when Westminster Abbey was erected, St. Paul's, Greenwich Hospital, Henry the Seventh's Chapel, Lord Grosvenor's, and numberless other edifices in England, as well as the Bank of Ireland, Four Courts Temple, Old Man's Hospital, Custom-house, Lord Kingston's, Earl Belmore's, Lord Gosford's castle, and many others that do honour to the architects that designed them, and to the different tradesmen and artists who executed the different works in their own department. The present mode is the cause of the emigration of all those men of talent and emulation, transplanting them to other lands, and rising in visible judgment against our empire, both in art, trade, and commerce, formerly admitted to be the mistress of the world for talent, emulation, and enterprise; and it astonishes me much that the Government of the day is persistingly so blind to its own interest in giving to one capitalist, who generally sub-contracts and doles out each department to a sub-contractor in each line for about the one-half what he gets, who, of course, cannot half pay his workmen, and has no interest in doing the work well, as his name is never brought into requisition: his object is only to have a certain quantity done, so as he can get the means to half pay the workmen under him, which is the cause of so many turn-outs and combinations amongst them; whereas, if the Government would subdivide the same, they would have more competition in the market, independent of the work being better done, as each trade would work with more emulation, and be accountable for its separate contract, the tradesmen under them be better paid, apprentices taught their business, a great saving to the public accrue, and good feeling, order, contentment, and comfort be created between master and man, and throughout all society. I have known in two or three recent instances in Ireland contracts given away in the stucco plastering line exclusively: of three separate Roman Catholic chapels, the works were given to carpenter contractors in place of legitimate stucco plasterer employers, which, in my mind, arose from the Government adopting this fatal system. I would suggest that Parliament ought to make a law to grant a yearly license to each individual tradesman (tested by skill and ability), say each tradesman to pay 1*l.* per year as a license, which would amount to some millions yearly: the said sum could go into the coffers of the Exchequer for the benefit of the public, or as a fund to protect the old and infirm tradesmen, many of whom are now a burthen to the poor-house relief; or it could go to educate the young orphan or tradesmen's sons in a preparatory and scientific education previous to their being bound to their trades.

T. MCANASPIE.

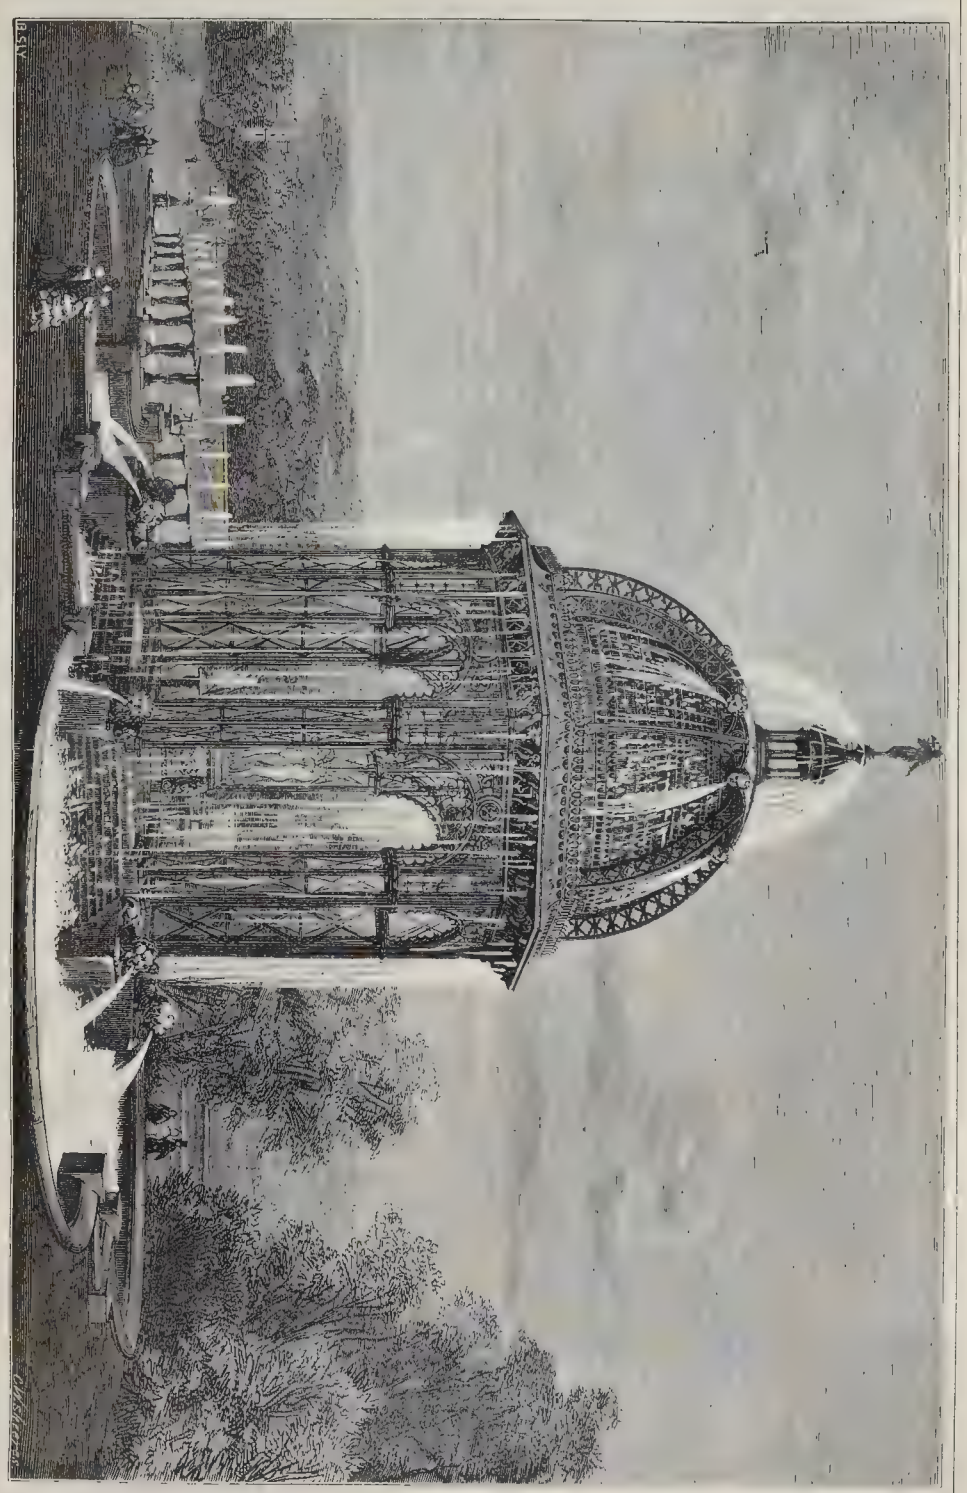
METROPOLITAN BUILDING ACT.

SHOP FRONTS.

"AN INQUIRER" writes, "As there appears to be some difference of opinion respecting the interpretation to be given to clause 3, sec. 26, of the new Building Act, which stands thus;—

'No part of the woodwork of any shop-front shall be fixed *nearer* than 4½ inches from the line of junction of any adjoining premises, *unless* a pier or corbel of stone, brick, or other fireproof material, 4½ inches wide at the least, is built or fixed next to such adjoining premises, as high as such woodwork is fixed, and projects an inch at the least in front of the face thereof;'—

it would be conferring an obligation if you, or one of your numerous readers, would define the limit of deviation from the other rules of the Act permitted by the said clause."



*** This is one of those obscurely-worded clauses, unfortunately not few, in the new Building Act, the exact intention of which cannot possibly be arrived at. We leave it at present for the consideration of our readers. It would seem, at all events, that the centre of the pier or corbel, of fireproof material, 4½ inches wide, may be made to range with the centre of the party-wall, notwithstanding the expression "*next* to such adjoining premises," thus permitting the woodwork to be brought within 2¼ inches of the line of junction. If it be not so, the "unless" means nothing.

BRITISH EMBASSY-HOUSES ABROAD.

THE House of Commons has refused to pass a proposed vote of 6,912*l.* for British Embassy-houses abroad. A portion of this sum, 1,627*l.* was for professional remuneration to the architect, Mr. Albano, in Paris, including personal and travelling expenses.

A correspondent animadverts on this, and says the same architect received another 294*l.* for his personal and travelling expenses in Madrid, and a further remuneration of 470*l.* "for professional services connected with the British Protestant Cemetery in the same capital."

Considering the smallness of the amount expended in both these cases (not so much, we are told, as the amount of the architect's remuneration), there seems to have been very bad management somewhere, but we are not aware of any circumstances to justify the onslaught on the architect. The Governments seem to be the parties to blame.

WATER BOILER, AT THE CRYSTAL PALACE, SYDENHAM.

[See p. 337, ante.

might have been lost to his family; and an equitable payment of a portion of the outlay from every person who might own the estate during the continuance of the rent-charge was secured.

The justice and the policy of this principle soon became apparent, and it was found that it might be safely and advantageously extended to the execution of other works quite as important as draining; such as good farm-roads, improved buildings, enlarged houses, embanking, irrigating, &c. But the administration was slow to secure the advantage to the public, and the need was merely registered by them for future consideration as a desirable object that it was the especial business of no one in particular to obtain. But private enterprise viewed the experience gained in a different light, and seeing that profit might be realized, took advantage of the inactivity of the Legislature, and formed private companies, by whom special Acts of Parliament were obtained, empowering them to create rent-charges upon land for the works above named. As this privilege was granted exclusively to the companies a monopoly was created, which has been to this day retained, and it results, that although a tenant for life may borrow or advance money for draining with the sanction of the Inclosure Commissioners, and make a charge on his estate for the amount so expended, yet the commissioners can themselves, in no case, make a charge on land for any of the other works above named. The companies alone can do this, because they alone have obtained the necessary powers from Parliament, and they charge every applicant 3 per cent. on the amount of his outlay for the use of their Act in making this charge. Still no reason can possibly be assigned why a landowner should not do all he may require directly with the commissioners, as in the case of drainage, and save his 3 per cent. and the unnecessary intervention of the company. I see no objection to the employment of a company to effect the arrangement if a landowner is disposed to engage such an agent; but I say it is monstrous to compel all to travel out of their way to accept such unnecessary and costly service.

But the Government is now alive to this, and a Bill has been prepared, which will soon become law if the popular voice is raised in its favour: it is known as the "Drainage (Private Advances) Act Amendment," and is before a select committee of the Lords, having been read a second time. Its provisions are simply to empower a landowner to do for himself directly with the Inclosure Commissioners, without the intervention of any third person, as much as he can now do with the commissioners through a company, so that he may no longer be compelled to pay 3 per cent. upon his outlay for services he may not need.

I have long advocated this measure, having in course of my practice experienced the necessity for it; and I wish now to bring the Bill under the notice of the public, and particularly of landowners having seats in the House of Peers.—CHAS. F. HUMBERT.

COVENTRY NEW CORN EXCHANGE AND MUSIC-HALL.

THIS building was inaugurated by a public dinner, on the 20th ult.—Lord Leigh, the Lord Lieutenant of the county of Warwick, being in the chair,—at which upwards of 400 persons attended; more than 200 ladies being present as spectators. The site selected is a very peculiar one, and the architect had to exert ingenuity to surmount the obstacles arising. The style chosen is Italian, with detail partaking of the Romanesque, brick and stone being the principal constructive materials of the front. The principal entrance is in the centre of the front, and consists of a columnar recessed portico, which is continued the whole height of the front, and is divided by the floor of the first story, which forms a gallery of semicircular shape over the entrance. The exchange-room is entered from a hexagon vestibule, and the first impression is one of surprise at finding so large a hall as is the principal one of the building come upon one so unexpectedly. The dimensions are 110 feet in length, by 55 in breadth, and 46 feet the height: the extreme width of the exchange-room across the galleries is about 74 feet. This is, we believe, the largest interior yet constructed for the purposes of a corn exchange, and its noble size suggests its future frequent use for the purpose of musical festivals, for which, we are informed, it has already proved itself to be well adapted. The entrance end of the room is semicircular: the opposite one is of elliptical form, intended to receive an organ and orchestra: the galleries, which are arcaded, run nearly round the interior, except the organ end, having corridors under, on the ground floor. The roof, or ceiling, is also elliptical and panelled, two rows of the panels being filled with glass, the others having appropriate plastic enrichments, emblematical of music, agriculture, &c. At night the hall is lighted by three gas sunlights in the ceiling. The front building contains five large shops on the ground floor, with assembly rooms, &c. in the two upper stories, which latter are connected with the galleries in the hall, an arrangement likely to prove advantageous when it is used for balls and musical meetings. Mr. James Murray, of Coventry, is the architect. The cost, including ventilation, gas, and other general fittings, together with stabling for the adjoining hotel, which, we should perhaps mention, runs under the whole of the main building of the exchange, was about 7,600*l.*

BUILDERS' PRICES.

Two years ago I sent you some remarks on builders' price-books, and suggestions for improving the same. I find that a Master Builders' Association, in the Midland Counties, have issued a "Local Price-Book." The attempt is praiseworthy, but I cannot say much as to the manner in which it is carried out. There are several blunders in the classification, and the bulk of the contents seems to have been copied from London publications, there being but a very small portion relating to local matters, and that without the usual explanations. In comparing the price of mortar, per hod and per barrow, with the prices of lime and sand, there is a great discrepancy: the quantity of lime and sand to a rod of brickwork, is not computed from any particular lime in the district, with a given quantity of sand (why use the rod when the standard of brickwork is a rood of 7 super. yards?). A better schedule of brickwork, giving the data on which it was founded, also separate prices for labour only, would have been serviceable; also a greater variety of prices for stonework, there being several valuable descriptions of stone in the district not mentioned, and various kinds of work peculiar to the same, which might have been advantageously introduced. The painters' prices want great reformation. In conclusion, I hope the members of the Association have agreed to adopt this standard of prices in their contracts as well as in their ordinary charges. Z.

ST. JOSEPH'S ROMAN CATHOLIC INSTITUTION FOR THE DEAF AND DUMB, CABRA, DUBLIN.

THE ceremony of laying the foundation stone of the above asylum was performed on Tuesday, the 9th inst. by the Archbishop of Dublin, in presence of a large number of the clergy and laity, the celebrated band of the Tipperary militia being in attendance, and an extensive platform and numerous tents having been provided for the accommodation of the spectators.

The building, which is of Tudor character, is to be erected of rubble limestone masonry, pebble-dashed, having the quoins, cornices, window dressings, &c. of red bricks, from Wexford, and the window sills, corbels, gable crosses, copings, &c. of County Dublin granite. The schools and dormitories will measure 67 feet by 32 feet, the flooring being formed of 3-inch deals, supported on wrought trellis iron girders, without joists. The central erection consists of apartments for chaplain, head-master, junior masters, and domestics; and the wings, when completed, are intended to afford beds for 200 children, with school-rooms, play and trades rooms, refectory, kitchen, offices, &c.

The contract for present works taken by the Messrs. Beardwood, amounts to 5,000*l.* and the designs are to be carried out under the direction of the architect, Mr. Charles Geoghegan.

THE SATURDAY HALF-HOLIDAY.

THIS boon has been conceded in Manchester to almost all classes of people, in Bradford also, and to at least professional men in Leeds; but in London there seems to have been as yet no step taken to close, as a general rule, all offices at an early hour on Saturday afternoon.

For more than two years I occupied a situation in a London office, and I can affirm now (after the lapse of five times that period) my sure belief that nothing would have been so gratefully received, nothing so beneficial to my health and feelings, nothing so calculated to increase my efficiency and retain me in the position of a cheerful worker, as the concession of the Saturday half-holiday.

My residence was at the extremity of Kensington-gardens: my daily walk through these and Hyde-park, yet the consequence of the unceasing round of duty was this that the rest of Sunday served only, in the *fœtid atmosphere of London*, to recruit my physical system for the succeeding three days, and left me subject to headaches, and other symptoms of a body out of sorts, and to the depressions and discontentments consequent thereon, for the remaining three.

I should, I believe, have been glad to purchase the remission of three or four hours on Saturday by extra time upon the other days of the week; but I question whether it is not quite as much the interest of the employer to grant freely the half-holiday, on account of the extra energy infused into the system, as it is of the employed to obtain it. In factories, as you are aware, where shorter hours have been conceded, the engine has been increased a corresponding per-centage in speed, and the loss recovered.

May the young men of our profession, when they obtain, as I hope and trust they soon will, the boon in question, imitate this example, and work with energy while they do work, but also forget not to *rest* when they ought. L. L.

POLYCHROMATIC GLASS.

SOME results have been submitted to us of an invention by Mr. Burridge, which has for its object the introduction of an entirely new description of coloured glass, adapted to useful as well as ornamental purposes, for which a transparent coloured glass, or a transparent and opaque coloured glass combined, is required. It consists in this,—that plates of glass being formed with a different colour on each side, patterns are removed by an acid, and give either one or other of the colours, pure white, or combinations of the two colours, according to the thickness of each left. It is applicable for the windows, walls, and ceilings of buildings in every style of architecture, and supersedes the necessity for any kind of lead-work. Glass thus decorated has a peculiar richness and brilliancy. The invention certainly deserves attention.

BUILDERS' BILLS.

Re SCHMOLLINGER AND BRAKE.

IN your publication of June 7th, some statements are made under the above heading which I cannot allow to pass unnoticed, although not interested therein beyond a desire not to allow reflections to be thrown upon one who is undeserving of them; and as I have had the pleasure of knowing and been known to you for upwards of eighteen years, and am well aware of your inherent love of justice and fair-play, so frequently acknowledged during your editorship of your excellent journal, I am very certain you will not deny me the opportunity.

Mr. S. was, I understand, the owner of the ground in question, and his fault has been placing too much confidence in man, and believing that all men with whom he came in contact were as well disposed as *himself*; and I dare to say, if you were to make personal inquiries among the majority of those to whom he is known, you would find a general testimony on their part to his straightforward conduct and integrity of manner.

A recital of the facts connected herewith would, I feel assured, lead you to a very different conclusion from that communicated to you; and although it has been his misfortune to have the award given against him, still the decision is not what could have been anticipated. The reason for his declaration of bankruptcy was the fact, that claims to the tune of upwards of 1,000*l.* independently of the costs of the other side, were being pressed upon him, and he desired that his creditors should equally participate in the residue of what was left him,—which an injudicious interference in building speculations had reduced to a small amount,—as you will not be much surprised to learn when I inform you that the action and arbitration were protracted for nearly two years, and the property, although since completed by another builder, has never yet been let. VERITAS.

THE METROPOLITAN BOARD OF WORKS.

AT a previous meeting of the Board, Mr. Carpmael moved the adoption of the report of the engineer, in so far as it related to the upper level and middle level sewers and other branches *north* of the Thames. This gave rise to a debate which was eventually adjourned. On its resumption on Tuesday, 17th, Mr. Leslie moved, as an amendment, that it was not expedient to discuss the northern drainage plan, proposed by the engineers, in sections, while the point of outlet remained undetermined, as that was the basis of the whole calculation, and the efficiency of the entire scheme depended upon it. After a long discussion the amendment was negatived by 13 to 6, and the original motion of Mr. Carpmael carried. Mr. Carpmael then moved the adoption of the report of the engineer, so far as it related to the western district and the construction of deodorizing works. Mr. Leslie opposed the motion, on the ground that it was altogether contrary to the Act of Parliament, which required them to remove the sewage entirely from the metropolis. The motion was lost. Mr. Carpmael next moved the adoption of the alternative proposition of the engineer in reference to the western district, which contemplates the construction of works suitable for pumping the sewage and rain water into the low level sewer. To this Mr. Hawkes proposed an amend-

ment that the Board proceed at once to the consideration of the outfall, and that the question stand adjourned until that point be decided. This amendment was negatived, and the original carried by 18 to 5. Mr. Carpmael moved the adoption of the engineer's report, so far as it related to the extension of Barking Creek. An amendment to this, by Mr. Savage, that no plan for the drainage of the metropolis north of the Thames could be deemed satisfactory which proposed an outfall within the metropolis, was lost by 15 to 10, and the original motion was affirmed. Mr. Carpmael next moved a reference to the Committee of Works of the report of the engineer, so far as it related to the low-level sewer, for their consideration and report. To this an amendment was moved by Mr. Ware, and seconded by Mr. Seeley, that a deputation of five members of the Board be appointed to wait on the Government to know whether their co-operation could be secured in reference to a plan for the embankment of the Thames. At this point, the debate was adjourned until Thursday next.

Notices of Books.

Ancient Crosses and other Antiquities in the West of Cornwall; drawn and engraved by J. T. BLIGHT. London: Simpkin, Marshall, and Co. 1856.

THIS is a small quarto volume of illustrations intended to preserve the forms of the Cornwall crosses, which are gradually disappearing,—not from natural decay, for they are in general made of enduring granite, but from mutilation and destruction by the ignorant and mischievous. The book contains illustrations of a great many of those still in a comparatively entire state. They are divided into examples of the Greek, Transition, Latin, and Gothic crosses; and appended are other illustrations, of Celtic, Druidical, and Roman remains, with brief descriptive details annexed to each view, and a few introductory remarks prefixed to the whole; and though the illustrations are scarcely up to the mark of present requirements, the volume forms a very useful record.

The Churches of Essex, architecturally described and illustrated. By GEO. BUCKLER, Architect. Parts I. and II. London: Bell and Daldy. 1856.

THE two parts of Mr. Buckler's work already published, contain accounts of Margaretting Church, Broomfield Church (with round tower), South Ockenden Church (also with round tower), Fryerning Church, and Mucking Church. It promises to supply a want, for, as the writer observes, "the authors of the Histories of Essex seem really to have overlooked the Architecture of the churches." Judging from the parts before us, the illustrations seem scarcely to go far enough: we would suggest the desirability of making them more complete; meanwhile, we recommend it to our readers.

Miscellanea.

PORTABLE THEATRE FOR ST. GEORGE'S HALL, BRADFORD.—It has been proposed to adapt this hall for operatic purposes. A beautiful little model has been prepared by Messrs. Grieve and Telbin, of London, of a portable erection which might be placed at the orchestra end of the hall (without in the slightest degree interfering with the structure of the building), and which included all the scenery, stage-fittings, &c. required for the performance of operas of the first class. It was stated that the whole outlay, including gas-fittings, would be only 630*l.* and that, as several parties had intimated their willingness to subscribe towards such an object, there was a probability that the whole amount might be raised without any outlay on the part of the shareholders. It has been justly urged that the hall was intended to be used for any object which would tend to the rational and innocent amusement of the people, and shall be glad to hear that the proposal is adopted.

WALLACE MONUMENT.—A meeting of gentlemen interested in this movement, lately inaugurated at Stirling, took place on Thursday, 12th inst. in the Queen's Hotel, when it was resolved that, recognising the duty of the citizens of Glasgow to take an active part in any well-conceived proposal for erecting an appropriate monument to the memory of Sir William Wallace, the citizens now present do pledge themselves to give their cordial support to the movement which has been initiated for the erection of a monument on the Abbey Craig, Stirling.

BRITISH SCULPTORS.—The vote of 17,500*l.* agreed to by the Commons in committee of supply, for the Scutari monument, designed and executed by Baron Marochetti, and now on its way to the East, has excited much adverse comment. The Sculptors' Institute, as our readers may have observed, has addressed a memorial to Sir Benjamin Hall on the state of sculptural art in England, in which, guarding themselves against any imputation of illiberal jealousy, they deprecate the unmerited neglect into which native talent seems to have fallen, and submit that public competitions, before a committee so constituted as to give confidence both to artists and to the public, ought to be instituted, so that foreign artists might at least be made to enter into fair competition with those of England, the models of every competitor being publicly exhibited before selection by the committee. The memorial is signed by all the principal sculptors of this country. More than one eminent sculptor has stated that the sum paid for the Scutari monument, which certainly betrays no great stretch of genius, is exorbitant.

THE POLYTECHNIC INSTITUTION, REGENT-STREET.—The lessee of the Polytechnic, Mr. Pepper, has issued a prospectus of a new course of Monday evening lectures, which opened on the 16th inst. with one by Mr. H. Mayhew, on the Curiosities of Life among the Labourers and Poor of London. The next (on the 23rd inst.) will be on Schools of Design and other Means of cultivating the Fine Arts, by Mr. Jacob Bell; and amongst the subsequent lectures of the course is one to be delivered on 4th August, on the Teachings of the Courts of the Crystal Palace, by the Rev. Charles Boutell.

PRIOR PARK ESTATE, BATH, is to be sold on the 24th by Messrs. Daniel Smith and Son. Tunstall, in his "Rambles Round Bath," states that "in 1738 John Wood, the celebrated Bath architect, who designed the Lansdowne-crescent, Circus, and many other fine buildings in and near Bath, received a commission from Ralph Allen, esq. to spare no expense in the erection of a mansion at Prior-park, to show to the world the capabilities of the Bath stone, which, on its introduction about that time, had been rejected by the London architects." It would be useful to know its actual and exact condition now, especially if the quarry can be identified.

ST. JAMES'S-PARK.—On 13th inst. Lord Palmerston, in committee of supply, moved for votes for the proposed improvements, and in the course of his remarks stated, that when the committee of supply before rejected or postponed the vote for the road, her Majesty, anxious to promote the public convenience, at once consented to give up a portion of the garden of St. James's Palace, in order that a straight road might be carried from the iron gate between Marlborough House and St. James's Palace, and thence across the bridge to be erected over the water. The estimate for the road, for a large footway, for rebuilding the wall at Marlborough House, and carrying it to the end of St. James's-garden, and for putting a railing at the back of the Ambassador's-court, and erecting lamps on the road leading to the bridge, would be 4,500*l.*, and that for the erection of the foot-bridge across the water would be 3,500*l.* After some discussion the vote for the road was agreed to without a division, and that for a bridge was carried by a vote of 182 against 95. A very fair and satisfactory decision has thus been come to in regard to these improvements, and the necessity of undermining the Duke of York's Column or removing either it or the German Chapel has been happily obviated by her Majesty's readiness to promote the public interests and convenience in the opening of the park to the public.

THE ADVANCEMENT OF SCIENCE.—In the Commons, on 10th inst. Mr. Heywood moved for a select committee to inquire what public measures can be adopted to advance science and improve the position of its cultivators. Some discussion, and four attempts to "count out" the house, took place, in the midst of which the Chancellor of the Exchequer objected to the proposal, on the ground that, as regarded the materials of science, its cultivators had no reason to complain; and Lord Stanley advised a reconsideration of the motion next session, as no specific measure was proposed; while Mr. Tite supported the motion, and suggested a Board of Science as a means of advancing science; and Lord Palmerston expressed doubts on this and other suggestions, and hoped a division would not be pressed. Ultimately Mr. Heywood withdrew his motion.

THE BOARD OF INLAND REVENUE AND THE SOCIETY OF ARTS.—Mr. John Wood, the chairman of the Board of Inland Revenue, has placed two appointments annually in the surveying department of the Excise at the disposal of the council of the Society of Arts. No candidate will be recommended for these appointments who shall not obtain second-class certificates, at least, in mathematics, chemistry, English composition, and writing from dictation.—*Civil Service Gazette.*

THE PEOPLE'S PARK FOR WOLVERHAMPTON.—Active and determined efforts are being made at Wolverhampton, to realize the project of a public park to which we have already alluded. In an able address, signed H. Beckett, president of the committee of working men elected at the public meeting originating the movement, the project thus assumes a definite form and outline:—Twenty acres of land should be selected, and it is hoped will be readily obtained in a healthy site removed from building land, although the park will raise the adjoining land fourfold in value for building. The purchase is estimated at 4,000*l.*; and the requisite draining, planting, fencing, &c. 2,500*l.* more; or, in all, 6,500*l.* The address suggests, that the money expended in a single pint of ale per week, by the 10,000 families of working men in Wolverhampton, for twelve months, would actually accomplish the end in view; and that if the remaining 2,000 families would only refrain from one bottle of wine each per week, a sum of 20,800*l.* might even be realized. The park would be for all classes. Why should not all contribute? All, doubtless, will contribute; for a project urged on with a will, as this one seems to be, is infectious, and the desire is likely to seize all classes, and to continue till the object in view be realized, as we earnestly trust it will be.

RAZING RUINOUS BUILDINGS.—Mr. Milner Gibson, M.P. as owner, and Mr. James Sutton, as occupier, of a house, No. 82, in West Smithfield, were summoned, on 12th inst. to Guildhall, and ordered to pull down the house in question in seven days, or, in default, the City Commissioners of Sewers to complete the work for them. Two adjoining houses, in an equally ruinous condition, were to be seen to by the solicitor for the Commissioners.——The Rev. George Last, and others, the owners of a house, No. 34, Farringdon-street, and Mrs. Burdett, as occupier, till 24th inst. were also ordered to pull down the house in fourteen days.——The occupiers of No. 120, Aldersgate-street, and house adjoining, were ordered to take down a dangerous party-wall in seven days.

APPROACHING IMPROVEMENTS OF CAREY-STREET.—A sale is now taking place of the building materials of a large block of property at the corner of Carey-street and Chancery-lane, which I believe is for the purpose of clearing the ground, for the erection of one of our principal insurance offices. I would ask, Has the line of frontage been determined upon? When the projected street was proposed by Government, it was determined to take an angular piece of the ground into the street to widen it. Would it not be as well if our Metropolitan Board of Works were to make such a matter one of consideration, rather than permit a noble structure, such as is proposed, to be built on the present line, where it would be hemmed in, and form an obstacle to the much-desired thoroughfare. I dont suppose that the freeholders will propose to give up any of their ground, and if no movement is made to get the required strip, it will no doubt occasion general disappointment, and I think that you will agree with me that such a chance should not be lost sight of. The principal frontage is in Carey-street, and is, as I believe, intended to be a building with two wings, and of handsome elevation; but it will be much out of place unless it is set back, constantly shaken by railway waggons, the footway being only 2 feet 9 inches, and the carriage-way with not room for two carriages to go abreast.—F.

STREET LETTERINGS.—As the fresh naming of streets is contemplated, it may be useful to mention the letters we have seen prepared at Mr. Minton's establishment. Some six inches high encaustic (white inlaid on black), have been for eight or nine years in use by the Bedford Paving Commissioners. These letters are made of the height of one or two courses of brickwork, to admit of their being let into the wall itself—a mode far preferable to the present exhibition of rusty-iron framework. Another letter is of a vitrified stone body, the coloured ground being burnt into the surface of the tile. The public is certainly entitled to all the information to be derived from a perfect system of street nomenclature: one should neither be condemned to stumble upon a Charles street at every hundred yards, nor have to call in imagination to make perfect what is now too frequently in a fragmentary state from frost or juvenile casualties, which the bulk of the letters in use are quite unable to withstand.

EXHIBITION OF THE FINE ARTS, BRISTOL.—The annual exhibition of the Bristol Academy for the Promotion of the Fine Arts, was opened to the public on Monday, the 9th. The productions are pretty equally divided between oil paintings and water-colour drawings, and, including eight architectural drawings, they amount altogether to 176.

METROPOLITAN TOLLS.—A select committee of the House of Commons has been appointed to inquire into these nuisances and obstructions. Lord Lonsdale, the chairman of the Middlesex Commission, has already intimated his anxiety that the parishes should take to the roads and relieve the commissioners.

LECTURE AT SHEFFIELD ON ROME AND ITS ANTIQUITIES.—A lecture was delivered in the New Queen-street National School-room, Sheffield, lately, before the members of the Church of England Educational Institute and their friends, by Mr. T. R. Smith, Associate of the Royal Institute of British Architects. The subject was Rome, and its Antiquities, illustrated by photographic views, and the attendance (according to the local *Independent*) was extremely good.

CHURCH STRUCK BY LIGHTNING. — During a thunder-storm on the 27th ult. the spire of Hemingbrough Church was struck by lightning, and so much damaged that it is feared a considerable portion of it will have to be taken down. The lightning passed through the spire and tower into the body of the church, and, taking an easterly direction, destroyed some of the interior fittings, and displaced two large stones in the main wall of the chancel. The lofty spire of this church is commonly called "Hemingbrough Broach," and is locally considered one of the best proportioned in the kingdom. The date of its erection is supposed to be about the middle of the fifteenth century.

OPENING OF NEW DOCKS AT WEST HARTLEPOOL. — The third dock at West Hartlepool, together with a graving dock, &c. have been opened in the midst of great rejoicings and festivities. At a general meeting of the proprietors of the West Hartlepool Harbour and Railway, held previous to the opening of the Swainson Dock, it appeared from the report read that the revenue of the company had increased during the last year in every department of trade; the income being 146,952*l*. 10s. 1d. showing an increase of 10,178*l*. over the preceding year. At present the company's harbour and dock works consist of—the tidal or outer harbour, 44 acres; first dock (coal), 8 acres; second (coal and merchandize), 14 acres; and third (for merchandize solely), 10 acres; besides 10 acres for timber float and store yards, with two graving docks, one 320 feet and the other 350 feet in length. The harbour, docks, quays, staiths, and terminal dock arrangements occupy a total space of 145 acres, which has been covered in little more than eight years. For the conversion of the bay of Hartlepool into a harbour of refuge, the directors stated that an Act of Parliament was obtained, and the port commissioners intend to construct two large piers or breakwaters to shelter the entire bay, and thus form an outer harbour of nearly 1,000 acres in extent, which will be accessible to the largest merchant ships on the coast in all weathers and states of the tide.

GAS.—The Plymouth Gas Company, according to the local *Times* is about to divide 10 per cent. on old shares, and 7½ on new ones, and as they cannot divide more than 10 per cent. the price of their gas, it is said, will be reduced from 5s. to 4s. 6d. per 1,000 cubic feet.——A gas company has been formed at Staveley, and works are about to be erected from designs by Mr. Cashin, of Sheffield, C.E.——The attempt to establish a new gas company in Willenhall is progressing successfully, though the old company have reduced their price to 5s. 6d. There is talk of the old company selling their works to the new, as well as of the very usual "amalgamation" between the two. A reduction of price to 4s. 6d. seems to be the point aimed at by the gas consumers of Willenhall.——Mr. Wm. Basford, of Pencławdd, has patented an invention for purifying coal gas, and obtaining a residuum therefrom. It consists in causing the gas when made to pass through vessels filled with any of the various charcoals, and heated; by preference charcoal made from wood, which is previously immersed in a strong solution of lime water for not less than fifteen minutes, and afterwards called prepared charcoal.

DEATH OF MR. BRINE, SURVEYOR TO THE BIRKENHEAD COMMISSIONERS.—We regret to have to record the demise of Mr. J. A. Brine, who for about twelve years fulfilled the important duties of surveyor to the Birkenhead Commissioners.

THE WESTMINSTER CLOCK. — Would not the Westminster clock be rendered more effective if a transparent red light could be placed at the extremity of each hand.—T.

UNITED SERVICE INSTITUTION.—At a meeting held on the 16th instant, a paper was read by Col. Twemlow, "On the Proper Season for Felling Oak Timber."

CARLISLE SURVEYORSHIP.—The Local Board of Health last week considered the subject of the appointment of a City surveyor, in the place of the late Mr. Hogg, when after some discussion it was resolved, by a majority of 16 to 10, to recommend Mr. McKie to the council for the appointment. Two names were voted for,—16 for Mr. McKie, and 10 for Mr. Gordon. On a question as regarded salary, a motion in favour of 150*l*. was rejected by a majority of 15 to 12, and 180*l*. recommended to the council by a majority of 17 against 10.

ELECTRO-TELEGRAPHIC PROGRESS.—Mr. J. Jones, of St. Asaph, Flint, has obtained provisional protection for improvements in telegraphs, by which a *fac simile* of the message is recorded simultaneously on the transmitting and receiving instruments, so that the sender may know immediately, and without the trouble of repeating, whether his message has reached its destination correctly. —— Mr. Thomas Allen, of London, C.E. has prepared a telegraphic wire of iron insulated with a new flexible material, sufficiently strong, it is said, to afford full protection, the whole weighing in some cases as little as one-tenth of the common wire, though having a conducting power three or even five-fold greater, while the relative proportion of strength in the wire is increased to a considerable degree.—— Mr. William Brown, of Australia, has made an offer to the Government to erect an electric telegraph from Mount Louis to Hobart Town, thence to Launceston and George Town, and to complete the whole within nine months from signing the contract, for 16,000*l*.——The screw-steamer *Propontis*, Capt. Goodwin, was lately at Queenstown, with the submarine electric cable to be laid down between Cape Ray, Newfoundland, and Cape North, Breton Island. The length of this cable is eighty-five miles, and its weight 170 tons. She has also on board the cable to be laid down between Cape Traverse, Prince Edward's Island, and Cape Formantino, New Brunswick,—length thirteen miles, and weight thirty tons. The cables were manufactured and are to be laid down by Messrs. W. Kuper and Co. of London, under direction of Mr. Canning, who, with his assistants, is on board.

AN IRON MONUMENT FOR THE IRON DUKE.—Having seen that a monument is about to be erected to the illustrious warrior in this our iron age of railways, palaces, suspension and tubular bridges, let me ask, Why should not the memory of the man be perpetuated in the material to which he was likened? In former ages, if we look into the memorials of the past, either at home or abroad, we find that our forefathers have left us specimens of their skill in the development of the same material. At home, in the chapel of Bishop West, at Ely; in the tomb of Edward IV. at Windsor; in the doors of Merton College, Oxford; at Bury St. Edmund's, at Westminster, at Leighton Buzzard, and the gates of the printing-office, Oxford; or abroad, in the cities of Munich, Brussels, Paris, Cologne, Liége, Rouen, Nuremberg, and the Grille of Sta. Maria, at Rome, &c. Why should it not be put forward for public competition, and the worker in metal be allowed to compete with the sculptor and the mason as in former ages? Are the works of the past not to be appreciated, which have stood the test of time? or are England and her artizans who build her iron ships and her locomotives, and send them over the face of the whole earth to defy competition in the construction, not worthy to erect a work of art to commemorate the greatest warrior of their age?—J. A.

BARN FLOORS.—With reference to "G. D.P.'s" inquiry concerning the means to remove moisture from asphalte barn floors, allow me to say, the moisture he complains of is caused by the damp vapour of the atmosphere being condensed on the surface of the asphalte floor, and not from its rising up through the same, as no dampness or moisture will penetrate through it if it is good material. The following method was carried out more than three years ago, in laying down the basement floors of an extensive range of first-class buildings in London. The ground underneath the floors intended to be laid was first well rammed down and regulated, on which a bed of concrete, 4 inches thick, was laid, to an even and level surface. Sleeper joists, 3½ inches deep, and 2½ inches thick, coated on the two sides and bottom edge with ashphalte, were then laid down on the concrete, at a distance of 12 inches apart. The spaces between the joists were then filled in with concrete, to within ¾ of an inch of the top of the joists. A layer of asphalte, ¾ of an inch thick was then spread over the surface of the concrete, thus forming a level floor of the asphalte and top of the joists, and securing a coat of asphalte between every part of the concrete and floor timber. Floor boards were then nailed or screwed down to the joists, completing the floors, which are now as free from dampness, moisture, and vermin, as when they were first laid down. The timber should be well seasoned before being used.—A. P.

LABOUR IN CANADA.—The *Canadian News* says: For three or four years past labour has been scarce and dear in Canada. The great public works, such as the Grand Trunk Railway, which will cause, from first to last, an expenditure something like 11,000,000*l*. sterling, have absorbed all the available labour, and raised it to an unusually high figure. Railway labourers have fetched from 4s. to 5s. sterling a day, and mechanical labour has been proportionably high. The great amount of extra labour employed on the railways has given the farmers a profitable consuming population.

MANUFACTURE OF IRON RODS, BARS, HOOPS, &c.—Messrs. Hocroft and Forrest, of Tividale and Tipton, have obtained provisional protection for improvements, which consist in piling together iron bars, and then rolling them down to one bar, which is slit into rods, either of one or more sizes, and at the same heat passed through rolls, with grooves, producing various descriptions of iron, such as two lengths of hoop iron and one of round simultaneously. By these means the bolting and breaking down processes may be dispensed with, and waste and heatings saved.

COOKING WITHOUT FIRE.—The *Scientific American* describes a plan for cooking without a fire. The invention is a combination of tin cooking dishes, placed one above another, the bottom of one vessel fitting on the top part of the dish below. In the lower dish of all a small quantity of quicklime is placed, and then, by means of a tube, cold water is introduced upon the lime. Chemical action generates intense heat, whereby the articles on the dishes are quickly cooked, ready for the table.

LETTER-BOXES. — Some compulsory enactment requiring letter-openings for all street-doors is very necessary. Being an observant individual, I not unfrequently see that for four, five, and six minutes, the postman has to wait unnecessarily at various street-doors. A double loss is entailed by the want of this very simple expedient: much unnecessary labour is entailed on the postman, with expense to Government and the ratepayers, and delay and inconvenience to the general public.—PAULATIM.

TENDERS

For the erection of a Warehouse Building, in Cannon-street West, for Messrs. C. Nicholson and Company. Mr. Richard Roberts, architect. The quantities supplied:—

Kelk	£11,760	0	0

TO BUILDERS, BRICKMAKERS, AND OTHERS
TO BE DISPOSED OF, upon moderate terms, a very large quantity of clean sharp SAND, which may be delivered into carts or barges from the excavations, which adjoins the New-cut, Limehouse.—Applications may be made to Messrs. BRADEL and SONS, 25, Gresham-street; or to Mr. DEVAL, at Messrs. Huddart and Co's Limehouse, who will show the sand

TO ENGINEERS, BOARDS OF HEALTH, &c.
PLUMBERS' WORK, ½ and ¾ inch Joints, 1s. 6d. each; inch ditto, 2s.; 1¼ inch, 3s. A Lead S Trap for 6s. 6d. Every description of plumbers' work executed in a first class manner.—J. GOODSON, 22, Hanover-street Pimlico.

TO PLUMBERS, PAINTERS, GASFITTERS, and OTHERS.—TO BE DISPOSED OF, an old-established respectable BUSINESS in the above line, for the low sum of 50*l.* This is a most genuine concern, and the most satisfactory reasons can be given for leaving.—Apply to Mr LAUGHTON, 60, Union-road, St. George's, Borough

BUILDER'S BUSINESS TO BE SOLD. Has been established thirty years and has a good jobbing trade. Coming in about 600*l.*—For full particulars apply to Mr. C. BROWN, House and Estate Agent, West Croft place, Hammersmith

IRONMONGERY BUSINESS.—FOR DISPOSAL a first-class BUSINESS, doing an extensive and lucrative trade in block and fur nishing ironmongery. The returns are about 15 000*l.* per annum, a considerable proportion of which is for cash. The premises are in a commanding situation, in one of the leading thoroughfares in London, and a large sum of money has been expended within a few years in rendering them externally attractive, and in adapting the interior completely for the various branches of the business. The stock is all modern, and of the best description. About 10 000*l.* will be requisite to purchase and carry on the concern, 5,000*l.* of which may remain on security for two years; and to two or three active young men, who can command that sum, an opportunity is thus presented of purchasing a business, which is of the first class, of a high reputation, and capable of still further extension.—Apply by letter only to Messrs. FULLER and HORSEY, 13, Billiter-street, City.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with power of conversion into Plots from one to five acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Grosvenor-square.

RICHMOND, RICHMOND-HILL, and TWICKENHAM.—FREEHOLD BUILDING LAND TO BE LET, on long leases, for the erection of various classed houses. Assistance given to respectable parties. Also, some unfinished houses to be sold.—Apply to Mr. R. BREWER, Surveyor, 8, Hill-street, Richmond, Surrey.

TO POTTERS, BRICK-MAKERS, and OTHERS.—TO BE LET, ELEVEN ACRES of LAND, containing pipe-clay, brick-earth, fire-clay, and fine sand, situate in a very desirable part of Hants, within a short distance of the most important commercial towns. The whole of the buildings, machinery, plant, and utensils are to be Let, on moderate terms, or taken at a fair valuation.—For further particulars, apply to Mr. S. BROAD, 55, Above-bar, Southampton

TO ARCHITECTS, ARTISTS, and OTHERS connected with Art, and Professional Men in general. OFFICES and PICTURE-GALLERY on a ground-floor TO BE LET, in Regent-street, Hanover-square.—Inquire of Mr. LAHEE, Agent, &c. No. 65, New Bond-street.

THE ERECTION of SHIRLEY CHAPEL, near Croydon, for SALE.—The building has been erected about seventy feet by forty-five feet, and consists of sound brickwork, with capital framed roof, covered with slates, eight Gothic headed windows, with quarry lights, boarded floor, reading desk, pews, open seats, forms, and fittings.—For plans and terms apply to Messrs. BLAKE, Croydon.

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, and two redeemed.—TO BE LET, upon building leases, for ninety-nine years, desirable BUILDING SITES upon the above Estate, the continual demand for houses in this locality, and the picturesque position of the property, adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For plans and terms apply to the Secretary of the Orphan Working School, 32, Ludgate hill; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WHINNEY and ASHDOWN, 42, Charing cross; or at the Lodge attached to the School.

NORWOOD, Weston-hill, close to the Crystal Palace.—PLOTS of BUILDING LAND for the erection of Villas, TO BE LET on lease, for ninety-nine years. Likewise, a FRONTAGE of 148 feet in length, on the high road opposite the Woodman Inn, and adapted for shops.—Plans and particulars may be obtained at the Office of C. SOMERS CLARKE, Esq. Architect, Buckingham Chambers, Adelphi.

TO QUARRY PROPRIETORS, STONE and SLATE MERCHANTS, and OTHERS requiring WATERSIDE PREMISES.—TO BE LET on LEASE, a WHARF, with good depth of water; also a Dwelling and Counting house, situate on the south side of the River Brent bridge Apply by letter, with real name and address, to A. Z. at Mr. Syrett's, Stationer, 47, Old Broad-street, City.

ELIGIBLE BUSINESS PREMISES TO BE LET, at SOUTHGATE, Middlesex, recently put into good repair, for trade, the last occupier having carried on the plumbing trade, for which it is peculiarly adapted, having in the rear a large plumber's work shop, pla-shop, plumber's room, painter's shop, carpenter's shop, a back entrance for carts; comprising also a convenient Dwelling-House, fronting the High-street.—For particulars, apply to WM. C. REED, Architect, 64, Old Broad-street, London.

THEATRE ROYAL, ADELPHI
(REBUILDING and ENLARGING)
3 per cent. per annum, freehold security, with a bonus estimated at 4 per cent. per annum)

SOLE PROPRIETOR AND MANAGER—Mr. Benjamin Webster.
TRUSTEES—The Right Hon. Lord Tenterden; Charles Manby, esq. C.E. F.R.S. &c.; and Charles Dickens, esq.
ARCHITECT—T. H. Wyatt, esq.
BANKERS—Messrs. Coutts, Strand; Barnett, and Co. Pall-mall.

Mr. Benjamin Webster, the sole proprietor and owner of the freehold of the Royal Adelphi Theatre, London, having lately purchased very extensive premises adjoining, has decided upon rebuilding and enlarging this theatre, which is acknowledged to be the finest and most valuable theatrical site in the metropolis.

For this purpose, in order to meet a portion of the consequent expenses, and induce a personal interest of the patrons of the drama in the undertaking, Mr. Webster has determined to issue a limited number of Debentures (not to exceed fifty at the most) to the public, bearing interest at 5 per cent. per annum, payable half-yearly, and secured upon the freehold of the Royal Adelphi Theatre, as well as upon the adjoining freehold above mentioned. Only applicants will be attended to who can give undoubted references of respectability. Each debenture to be 600*l.* payable as follows:—20*l.* per cent. to be deposited on application for debenture or debentures, which will be returned, free of all charge, if no allotment is made; 250*l.* on each debenture upon allotment, less the deposit; and the residue by monthly sums of 50*l.* from the day of such allotment, which sums will bear interest at the rate aforesaid, from the time of their respective payments, to Messrs RANSOM, BOUVERIE, and CO.

By way of bonus, each debenture is to be entitled to a free admission annually transferable, to all parts of the theatre before the curtain, orchestra stalls and private boxes excepted, which will admit the occupier to order, his or her carriage (not of course of approved respectability), to every public performance throughout each year, commencing from the 29th of September. This privilege, totally distinct from the admission, being annually transferable, is estimated at 20*l.*; there being on the average upwards of 400 performances in each season, which, with the 5 per cent. insured, equals 9 per cent. in each debenture

FORM OF APPLICATION.

"Sir,—Having paid into Messrs Ransom, Bouverie, and Co's the sum 1*l.*—, being 5 per cent. on the amount of the allotment required by me, I request that you will allot me £500 debentures, secured on the Royal Adelphi Theatre and adjoining freeholds, agreeably to the terms of your prospectus; and I undertake to pay the sum of 20*l.* per debenture, less the above deposit, on the allotment being made, and to pay the residue, at the rate of 50*l.* a month, on every debenture from the date of such allotment.

Name .....
Residence .....
Profession or occupation .....
Date .....

To B. Webster, esq. Royal Adelphi Theatre, London.

Prospectuses and forms to be had at the Theatre.

N.B.—The theatre is to be constructed on plans rendered perfect by repeated visits, and soon as approved of by the Board of Works and the Lord Chamberlain, will be submitted for the inspection of the applicants

ROYAL POLYTECHNIC.—Patron, H.R.H. Prince ALBERT.—On Monday evening, June 23, at Eight, Jacob Bell, esq. will Lecture on schools of Design, and other means of cultivating the Fine Arts.—On Monday, Wednesday, and Friday, at Four and Nine, the Grand Series of Views after DAVID ROBERTS, as published in Fullarton and Co illustrating Bunyan's Allegory of the Pilgrim's Progress, with descriptive Lecture by the Rev J. B. Brasted.—On Tuesday, Thursday, and Saturday, at Three, Lecture by J. H. Pepper, esq. on the Moon Cosmogeny.—On the same days, at Four and Nine, the Historical Entertainment of Kenilworth; and at half-past Three and Eight, Performances by Mdlle Mundie on the Cither, and Herr Zirom on the Child's Mouth-organ.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Magic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to C. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brick-work, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of their very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 80, Old Broad-street, London; to Mr. MUNEMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER ROLLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKES.

Agents in London, Messrs. GEORGE POUTER and CO. Limemerchants, Furfleet-wharf, Earl-street, Blackfriars, and No. 10, North-wharf-road, Paddington.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality, Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms.—Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 63, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs.
Warehouse, No. 1, Wharf, Paddington-basin.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), and 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 6d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

MEDINA CEMENT CONCRETE BUILDINGS.

This mode of applying cement is suitable for sea groyne, sea walls, and for soldiers' huts, emigrants' dwellings, temporary chu ches, school-houses, and workmen's cottages, all of which may be built with greater rapidity and economy than with any other materials; good cement and sea beach, or washed gravel stones, only necessary.

A sea groyne 200 feet in length, erected four years since in Sandown Bay, Isle of Wight, is a perfect specimen.

Two concrete models may be seen at FRANCIS' (BROTHERS), Cement Works, Nine Elms, London; and two soldiers' huts have been built by them for the Government, at Shorncliff Barracks, near Sandgate, Kent.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead; whilst the consumption of material is less than for one coat. It dries very fast and hard.

HUBBUCK'S STONE COLOUR BODY PAINT the same as the former, at three-fourths the price.

HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and iron exposed to salt water; neither bilge water, nor noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages, stamped, HUBBUCK, LONDON. PATENT; and when so marked the quality is guaranteed.

HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Timber coated with this Enamel is not attacked by the worm neither do barnacles attach to it.

Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.

OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at the Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

3 & 5, South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.

All applications for prices and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—CHARLES NELSON can supply direct from the Works in his own boats to any part of the Thames alongside, in the Docks, River Lee, on any canal, or by rail to any part of the kingdom, large quantities of the above GENUINE HYDRAULIC LIME, now so extensively used.

Quality, Weight, and Measure may at all times be strictly relied on; references in proof of the above can be given.

N B The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enabled to know exactly what weight of Lime he is paying for.

All orders addressed to the
LONDON DEPOT, 16, SOUTH WHARF, PADDINGTON,
BLYTH, BROTHERS, SOLE AGENTS,
Will be promptly attended to, and any further information can be obtained from them
Works, Stockton-field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway in London.—Any further information can be obtained at their Works, Baldwin's-place, Gray's-inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
WHITE SUFFOLK PERFORATED BRICKS;
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 5, ADELAIDE-PLACE, London-bridge

BEST HERTFORDSHIRE MALM SECONDS AND CUTTERS ALWAYS ON HAND.
MILLS AND PRICE, 5, ADELAIDE-PLACE, LONDON-BRIDGE;
AND CROWN WHARF, GREAT SCOTLAND YARD

HERMITAGE BRICKYARD, North-end, Fulham.—The best description of STOCK BRICKS now ready for sale at this yard. Gentlemen and builders are respectfully invited to inspect the quality of these bricks. Price for cash, 26s. per 1,000.

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane, Dulwich. Price of good stock bricks, 25s. per thousand on the field, for cash.—Application to be made to the Foreman, A. DANIAM, at the Works.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for ashphalte, Land Drain Pipes, Patent Drain Pipes, Clay, Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 200 to 300 tons can load alongside the wharves at Grays. At MEESON and CO.'S malt-yard and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Nodule and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.

General Office—No. 12, GEORGE-YARD, LOMBARD-STREET.

Letters addressed to Grays Essex, will meet with immediate attention.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of these is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to test it in operation every Thursday and Friday. It is the most simple machine seen at work, on application to
HENRY C. MOUNT, Sec.
37, King William Street, City.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES.
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.

This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in towns, cottages, and agricultural buildings.

Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles (delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street Docks, City-road Basin, Shoreditch, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURY," page 82, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

H. and R. HAYWOOD, Brownhills Blue Metallic Tileries, near Burslem, Staffordshire; London Depôt, 13, South Wharf, Paddington, Manufacturers of Improved Plain and Ornamental Roofing, Ridge, and Flooring Tiles, for Churches, &c.; also Metallic Plain and Socket Sewerage Pipes, &c. adapted for Sanitary and Railway purposes. They are extensively used on the London and North Western, Great Western, Trent Valley, South Staffordshire, and other Lines of Rail, and highly approved. Warranted imperishable, and to resist all acids and exhalations.

*** A FIRST-CLASS MEDAL was awarded to H. and R. HAYWOOD, by the Jury of the GREAT EXHIBITION.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Cornices for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent Staffordshire.

HOGG'S GARDEN EDGE TILES.—The attention of persons engaged in laying out Gardens for Public Institutions is solicited to these Tiles, as an elegant, cheap, and permanent substitute for box edging. In colour they resemble Bath stone, are very hard, easily laid down, afford no shelter for vermin, and act as a drain to the paths. Price 13s. per 100, or about 4½d. per yard run.—Full particulars on application to R. BLACKETT, Witham, Essex.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly seven years, and having during this period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dock-yard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith, take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,

LAMBETH POTTERY, HIGH-STREET, LAMBETH,

Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to

5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pan.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,

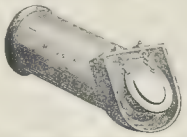
IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.



EXTENSIVE REDUCTION IN PRICES.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET.

DEPOT, 2 AND 3, HIGH-STREET, LAMBETH.

HALF SOCKET.

WHOLE SOCKET.

Manufacturers of every description of Sanitary Glazed Sewage Pipes, Bends, Junctions, White Glazed Closet Pans, Gas Retorts, Furnace Blocks, Crucibles, Fire Clay, &c. &c.

The Fire Bricks made from the Clay of this estate have been tested, and proved to be in every respect equal to those of Stourbridge and Newcastle.

DRAWINGS AND PRICES MAY BE HAD OF J. COX, AS ABOVE.

DURABILITY of GUTTA PERCHA TUBING.

—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HOSE PIPING.—WAITHMAN'S

PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

½	⅝	1	1½	1½	1¾	2	2¼	2½	2¾	3 in.
9d.	11d.	1s.	1s.	1s.	1s.	1s.	1s.	2s.	2s.	2s.

Super-extra stout quality.

2	2½	2½	2¾	3 inches.
2s.	2s.	2s.	2s.	3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

½	¾	1	1¼	2	2½ inches.
6d.	7d.	10d.	1s.	1s.	1s.

The hose is Barnettised at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

CHAS. MACINTOSH and CO. Patentees

of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 4, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

HANCOCK'S PATENT VULCANIZED

INDIA RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

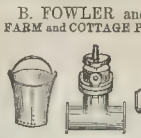
VENTILATION.—J. KITE, Patentee for

Ventilating and Smoke-curing Operations.—Churches, chapels, schools, club-houses, public buildings, stables, &c. effectually ventilated, upon a new and economic system. Also, the New Patent Albert Chimney Cap, for the cure of smoke. Patronised by her Most Gracious Majesty; and on Buckingham Palace; to be also on St. James's Palace, Clarmont, Windsor Castle, Government buildings, &c. Wrought iron, 35s.; galvanized ditto, 30s.; cast iron, 33s. each, the latter as durable as the building itself. Illustrations and testimonials forwarded on receipt of two postage stamps.—Depôt, BARTON'S Ironworks and Manufactory, for the Patent Stable Fittings and enamelled Mangers.—Address, JAMES BARTON, 370, Oxford-street, London.

GARDNER'S PATENT SMOKE-CONSUMING APPARATUS

may be seen in successful operation in many places. Saves 30 per cent. fuel, and is entirely new. A Mr. Woodcock having made assertions affecting this patent, the patentee will perfectly satisfy all parties of the incorrectness of such statements at 7, Norfolk-street, Middlesex Hospital, or to the Makers, Messrs. BRIDGE and HEALY, 119, Dorset-street, Fleet-street.

CARTS, VANS, WAGGONS, LADDERS,



BARROWS, &c.—Price Lists for the Month may be had on application of

No. 1. Carts, Vans, Waggons, Drays, and Trucks.
No. 2. Wheels and Repairs.
No. 3. Ladders, Barrows, &c.
No. 4. Hire of ditto.

G. ELL, 3, Tottenham-court-road, and 8, Palace-row, New-road, St. Pancras, near the Hampstead-road.

B. FOWLER and CO.'S

FARM and COTTAGE PUMPS, 30s.

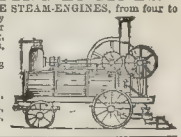
All sizes and descriptions of Pump, in various plain or ornamental patterns, for public places; for deep or shallow wells. Brass Lift Pumps, Engine Frames, Horse-gear, Crabs, Pulley Blocks, Wrought Pails, and Rubbish Baskets, Sewer Lamps, Sluice and Hot-Water Valves, at lowest prices.

N.B. Every attention paid to country, export, and trade orders. Experienced workmen sent to any part of the kingdom, to fix PUMP WORK, HOT-WATER, STEAM, BATH, or DRYING APPARATUS.

BENJAMIN FOWLER and Co. General Engineers, Whitefriars-treet Fleet-street.

PORTABLE STEAM-ENGINES and

PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).



CONTRACTORS' STEAM-ENGINES.—

TO BE LET, on HIRE, or for SALE, several NEW and SECOND-HAND STEAM-ENGINES, of various powers, suitable for contractors' work generally.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, Blackfriars-road, where they may be seen.

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

TO SUGAR REFINERS, &c.—STEAM-

ENGINE and VACUUM PUMPS for SALE.—A very superior 14-horse-power Beam Engine, with Pumps attached, adapted for working two strikes of pans of 200 gallons each. Both engine and pumps of the best workmanship, by Sheara and Son of London, and nearly new. For further particulars, or to view, apply to Mr. ARNEY, York-place, Battersea.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the pump considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS, 8, Crescent, Jewin-street, London, Manufacturers and Patentees.

R. RICHARDS and CO.

PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, mines, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 36s. per doz. painted.
Ditto .... 42s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

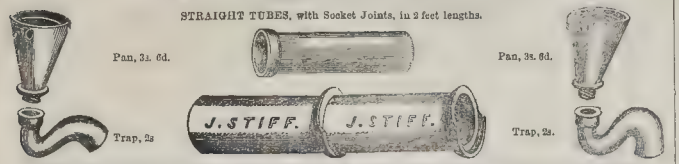
TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as being free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.



GREAT REDUCTION IN PRICES.

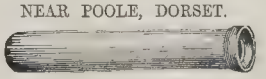
JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,

LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

STRAIGHT TUBES, with Socket Joints, in 2 feet lengths.

HALF-SOCKET PIPES same prices as whole Sockets, by the use of which, Drains may be readily examined, and Junctions INSERTED, IN THE EVENT OF REQUIRING FURTHER CONNECTIONS.



May be had also at the following wharfs, viz.:—

Messrs. GLADDISH'S, Pedlar's-acre, Westminster-bridge-road; City-road Wharf, City-basin; Dockhead-wharf, Bermondsey; Denyer-wharf, Chelsea; Pratt-wharf, King's-road, Camden-town.
Messrs. COLES, SHADBOLT, and CO.'S, St. James's and Thornhill Wharfs, Caledonian-road, Pentonville.
Messrs. HITCHIE and SMITH'S, Ravensbourne Wharf, Greenwich.
Mr. LAVERS'S, Dowgate-wharf, Canal-road, Hoxton.

Drawings, with Prices, will be forwarded free, on application.

THE BRANKSEA POTTERY,

NEAR POOLE, DORSET.

GREAT REDUCTION IN PRICES OF DRAIN-PIPES.

TO THE METROPOLITAN BOARD OF WORKS, DISTRICT BOARDS, BOARDS OF HEALTH, TOWN COUNCILS, IMPROVEMENT BOARDS, SURVEYORS, AND BUILDERS.

THE BRANKSEA POTTERY and CLAY COMPANY are prepared to supply all descriptions of Glazed Drain-pipes, Bends, Double and Single Junctions, Closet-pans, &c. Also, Terra-cotta Chimney-pots and Fire-bricks of a very superior quality at moderate prices.

N.B. A LIBERAL DISCOUNT TO THE TRADE. A LARGE ASSORTMENT OF GOODS CONSTANTLY ON SALE.

The clay obtained from the pits on the Island of Branksea is of the finest quality, and the goods are manufactured by men of long experience in the trade, with the aid of powerful machinery. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.

A list of prices forwarded free on application to Mr. T. G. BECK, at NEW WHARF, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTS, at the Works, Branksea Island, Poole, Dorset.

GREAT REDUCTION IN PRICE OF DOULTON'S DRAIN-PIPES.

HENRY DOULTON AND CO.

Beg to inform Builders, Contractors, and others, that they have made a considerable REDUCTION in the PRICES of their

GLAZED STONEWARE DRAIN-PIPES,

Drawings and Prices will be forwarded on application.

GREAT REDUCTION in PRICE of STONEWARE DRAIN-PIPES.

WILLIAM NORTHEN,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH,

begs to call the attention of Surveyors, Contractors, Builders, and others, to a very great REDUCTION in the PRICES of his

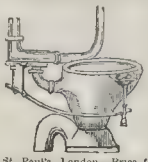
GLAZED STONEWARE DRAIN-PIPES.

LISTS OF PRICES FORWARDED ON APPLICATION.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine-Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at					3d. per foot.
4	"	"	"	"	4d. "
6	"	"	"	"	6d. "
9	"	"	"	"	9d. "
12	"	"	"	"	1s. 6d. "
15	"	"	"	"	2s. 6d. "



These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the most approved principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish street, near St. Paul's, London. Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

CLOSET BASINS, WHITE and BLUE URINALS, &c.

MANUFACTORY—MILLWALL.

DEPOT:

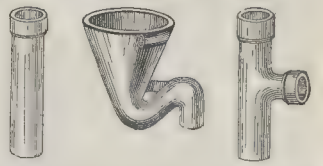
ARTHUR-STREET, NEW OXFORD-STREET.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,



Brass Founders and Engineers,

Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price complete, 13s. 6d. each.

TO LOCAL BOARDS of HEALTH, SURVEYORS, &c.—The Best and Simplest MACHINERY for CLEANSING CESSPOOLS, DRAINPIPES, &c. including everything that is required, can be obtained from R. HARRETT and SON, Brass and Iron Founders, Beech-street, Barbican, London, who will furnish prices on application.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, 88, Bankside. DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

STONE-PIPES.—GLAZED STONEWARE PIPES of the most superior quality, at REDUCED PRICES.—E. and W. STURGE invite particular attention to their stock of these goods, which continue to give great satisfaction both as to manufacture and price, a list of which will be sent upon application. An increased discount will be allowed to large contractors. Every description of junctions, bends, &c. in stock. Yorkshire paving, sinks, sills, steps, and coping, &c.—E. and W. STURGE, Bridge-wharf, City-road.

CLAY.—The BRANKSEA CLAY COMPANY, near Poole, Dorset.—Stone and other Potters are informed, that they can be supplied by the above Company with all descriptions of clay of the finest quality, and in any quantities, at very low prices. Brewers, Gas Companies, Farmers, Builders, and others, supplied with peculiar fine fire clay: the same may be had ground, if required.—Orders addressed to Mr. T. G. BECK, at New Wharf, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTS, at the Works, Branksea Island, Poole, Dorset, will meet with prompt attention.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years at Her Majesty's Dockyards, and by Official Reports made thereon, which testify that coats of Wolston's Torbay Iron Paint will effectually cover as much surface as Lead Paint of the same Colour, White or Red Lead, and that they are stronger and cheaper than Lead Paints for all Public Works, Roofing, Boarding, and other Iron Roofing, Fencing, Shipping purposes, Wood or Iron, Stone or Cement Fronts, economy and durability will be secured. To Builders and Painters, for all inside purposes, they are equally applicable. Manufactured at the TORBAY IRON PAINT and OIL WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John street, Bedford-row, will have immediate attention.

SALES BY AUCTION.

TO TURPENTINE AND TAR DISTILLERS AND OTHERS.

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on WEDNESDAY, JUNE 25, at ELEVEN, in lots, without reserve, on the PREMISES, of Messrs. Masterton, Rotherhithe, near the Old Lie Dock, the PLANT of a TURPENTINE and TAR DISTILLERY, including two copper melting-pans, capable of melting twenty-five barrels each; four copper turpentine stills, 500 to 700 gallons, with copper heads; four copper worms and backs, one copper tar still, to work sixteen tarrels, with copper head and pewter worm and tub; four cast-iron resin oil pans, seven cast-iron pans, four-horse power steam-engine and boiler, several rods of brickwork furnaces, work and smoke-consuming apparatus, four large lead turpentine and oil cisterns, in wood cases; twenty turpentine coppers, fourteen iron-bound oil-butts, with brass cocks; scales beams and weights, two waggons, two waggons, two carts, harness, various utensils, and a quantity of building materials, in partitions, rafters, &c. To be viewed on TUESDAY previous to the sale, when catalogues may be had on the Premises, and of Messrs. Fuller and Horsey, Butler-street, City.

THE PRIOR-PARK ESTATE, BATH, comprising a noble and spacious stone mansion, with its extensive modern wings, connected by arcades and corridors, lately occupied as the Great Rom n Hotel, the coach-house, stabling, and other appendages, delightfully situate on one of the proud eminences overlooking the fine city of Bath, and commanding a grand expanse of magnificent scenery, but secluded in private grounds of surpassing and varied beauty.

MESSRS. DANIEL SMITH and SON are commissioned to submit for PUBLIC COMPETITION, at the MART, for the Lots of England, on TUESDAY, the 24th of JUNE, at TWELVE, unless an acceptable offer shall be previously made by private treaty), entire (or in a few sub-divisions presenting choice sites for building), the above very important and far-famed ESTATE, within and consequently possessing considerable influence in the borough of Bath. It comprises nearly 200 acres, in a ring-fence, tithe-free, and chiefly sound pasture land, finely undulated and richly wooded, and embellished with ornamental plantations, fish ponds, and hedges. The mansion, formerly the residence of Lord Hawarden) is of the best Bath stone, and is a charming and noble specimen of architecture, with a grand portico to each principal front of lofty Corinthian columns, and containing ample accommodation for a family of rank and fortune, with handsome mahogany and stone staircases, mahogany doors, &c. The wings, distinguished as St. Peter's and St. Paul's, comprise the chapels, dormitories, lecture-rooms, theatres, studios, refectories, &c. but might be easily removed. There are capital stabling and farm buildings, with various other detached offices, excellent gardens, and romantic pleasure-grounds, with terrace and other walks and rides of unusual variety and extent, the whole abundantly watered with springs of the purest water. Also, an ornamental cottage retreat, known as the Priory, a complete gymnasium, and several neat entrance lodges, all in repair, and very valuable stone quarries. Descriptive particulars, with plans, may be had (2s. each, to admit four persons), at the chief inns and libraries at Bath; of Messrs. Daggerfield and Fraser, Solicitors, Craven-street, Strand; of Messrs. Watts and Petgrave, Solicitors, Bath; at the Auction Mart; and of Messrs. Daniel Smith and Son, Land Agents, 11, Tavistock-place, Pall-mall, who are fully authorised to treat for its disposal.

TO CONTRACTORS, BUILDERS, CARPENTERS, AND OTHERS.

MESSRS. DAVIS and VIGERS are instructed to SELL by AUCTION, on the PREMISES, Cherry-tree yard, Bowling-green-lane, Clerkenwell, on THURSDAY, JULY 3rd, and following day, at TWELVE for ONE each day, the well-seasoned STOCK of MAHOGANY and FIR TIMBER, comprising 2,000 pine planks and deals, 600 yellow and white deals, 1,200 yellow and white battens, 100 squares of prepared flooring and match boarding, 5,000 feet of prepared mouldings, 12,000 feet of Spanish and Honduras mahogany, cut from eighteen months to three years; oak staves, fir timber, ash, beech, elm, and other planks, 3, sashing, panitic laths, and sundry useful stuff.—May be viewed the day previous and morning of Sale, and catalogues had on the Premises; and at the Auctioneers' Offices, 3, Frederick's place, Old Jewry.

GRESHAM-STREET WEST.—Building Materials of Two Houses.

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on THURSDAY, JUNE 26th, at TEN for ELEVEN precisely, all the BUILDING MATERIALS and FIXTURES of two houses, Nos. 5 and 6, Gresham-street West, Wood-street, comprising sound brickwork, plain and pan tiles, oak and fir timber, oak and deal floors, glaze dashes, doors, floor-boards, shop fronts, lead gutters, batten cisterns and pipes, stoves, and other useful fixtures and fittings.—May be viewed on WEDNESDAY.—Catalogues had of PULLEN and SON, 89, Fore-street, Cripplegate.

ARTILLERY PLACE, FINSBURY.—Capital Building Materials of seven large Residences, to clear the site for the Royal London Dairy.

PULLEN and SON are honoured with instructions from her Majesty's Commissioners of Lieutenancy for the City of London, to SELL by AUCTION, on the PREMISES, on MONDAY, JUNE 30, and following day, at TWELVE, in lots, the whole of the excellent BUILDING MATERIALS, FIXTURES, and FITTINGS-UP of SEVEN RESIDENCES, of an unusually superior description, Nos. 19 to 25 inclusive, in Artillery-place (adjoining the Artillery Ground), comprising 800,000 capital stock bricks, prime oak and fir timber, in large and useful scantlings, 60 squares of slates and slating boards, 12 tons of lead, in gutters, flats, cisterns, and pipes, 200 pairs glazed sashes, with shutters, modern doors, partitions, handsome marble chimney-pieces, and interior fittings-up, 300 squares of capital boarded and tongued and grooved paving and steps, oppn and plain iron balcony and verandah rails, 1 chain of iron railing, 100 modern stoves and ranges, coppers, force-pumps, large iron bookcases, gas fittings, and all the expensive house and office fixtures.—May be viewed on FRIDAY previous, and catalogues had of HENLEY SMITH, Esq., Clerk to the Lieutenancy, 4, Warnford-court; of JOSIAH JENNINGS, Esq. Architect, 3, Foley-place; and of PULLEN and SON, 89, Fore-street, Cripplegate.

WHITEPARISH, eight miles from Salisbury, seven from Romsey, fifteen from Southampton, and two miles from the Dean Station on the South-Western Railway.—Important Timber, sale.—To Timber Merchants, Timber Merchants, Carpenters, Wheelwrights, &c.

MESSRS. KEYNES will SELL by AUCTION, at the MANOR FARM, Cowesfield-green, near Whitparish, on WEDNESDAY, the 30th of JULY, at TWELVE o'clock, 400 prime OAK TIMBER TREES, 8 Elm Trees, 13 Beech Trees, 143 capital Oak Flitterns, 40 Ash Flitterns, now lying marked in sundry lots in Cowesfield Wood, in Gatemoor, in Gasens, and in Meanwood Coppices; in Long Field, Beechy Nesick, Cumming's Meadow, and in Tom Pike's Row, on the above estate. The above are choice parcels of timber, remarkable for its superior quality, being well adapted for ship-building, and other purposes. Parties requiring timber of considerable dimensions and long lengths will find this sale well worth attention.—Catalogues may be had at the Inns in the neighbourhood; of Messrs. Cobbett and Sons, Solicitors, Romsey; and Messrs. Burt, the woodmen, near Whiteparish, either of whom will show the lots. Catalogues may be also had at the King's Head Inn, Whiteparish, and of the Auctioneers, Salisbury, of whom any additional information may be known.

IMPORTANT TIMBER SALE, CLARENDON-PARK, near SALISBURY.—To TIMBER MERCHANTS, SHIP BUILDERS, and Others.—To WHEELWRIGHTS.

MESSRS. KEYNES will SELL by AUCTION, at PIPER'S BARN, Clarendon-park, on THURSDAY, JUNE 26, 1856, at TWO o'clock, about 300 capital OAK TIMBER TREES, and a large quantity of OAK and ASH FLITTERNS, now lying, marked in suitable lots, on the above estate.—Catalogues may be obtained of Mr. PARSONS, Clarendon-park, who will show the lots. Catalogues may be also had of Mr R. ELKINS, Clarendon-park; and of the Auctioneers, Salisbury, of whom any additional information may be known. The above oak timber is noted for being exceedingly spiney and sound. The cutting this year is very superior, and will be found well worthy the attention of parties requiring useful timber.

SALES BY AUCTION.

CAMDEN-TOWN.—To CABINET and PIANOFORTE MAKERS, COACH-BUILDERS, CARPENTERS, and OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, Stanmore place, Clarendon-street, Grove-st et, near Park-street, on MONDAY, JUNE 30th, at TWELVE for ONE precisely, a fine drove of FIVE-BOARD HARDEANY, and yellow pine and spruce planks, deals, and battens, 2,000 feet of quartering, thirty squares of flooring, dry oak stuff, work-benches, sun-blinds, loose wood, old range, screws, slate cisterns, stone, tubs, &c.—To be viewed on SATURDAY prior to the sale when catalogues may be had on the Premises, and of the Auctioneer, Cardinal-parade, Hampstead-road.

ALFRED EWITT will SELL by AUCTION, at ELEVEN o'clock, on TUESDAY next, 24th JUNE, on the PREMISES, No. 4, Dunsmure-place, Union-street, Borough, about fifty well made and thoroughly dried DOORS, glued up, by order of Mr J. Harrison, Carpenter, &c. Also to suit the premises at Midsummer-fee. Parti ulars to be had on the Premises, of the Auctioneer, City-chambers.

FREEHOLD LANDED PROPERTY near BRISTOL.—To CAPITALISTS, CONTRACTORS for PUBLIC WORKS, BUILDERS, STONE-MERCHANTS, and OTHERS.—The Dodge Estate, Stoke Bishop, Bristol to Pressing Quarries.

MR. J. DEBENHAM has received instructions from the mortgagee to SELL by AUCTION, at the MART, on WEDNESDAY, the 16th JULY, at TWELVE, in two lots, the important FREEHOLD ESTATE known as "Dudley Down," comprising about seventy-five acres pasture and arable land, situate on the summit of Dudley Hill, 4½ miles from the city of Bristol, with the extensive and valuable quarries, containing an immense quantity of the finest description of building stone, the quality of which has been tested by C. H. Smith, Esq. of London (one of the gentlemen appointed under the authority of the Lords Commissioners to select the stone used for the new Houses of Parliament), who reports it has been published and highly satisfactory. It is specially adapted for substantial and ornamental buildings and possesses every evidence of which from the fact that they excellent quality of Dundry Hill, 4 miles from the city of Bristol, with the exception of Dundry Hill, built with stone from these quarries in the thirteenth century. The quarry has been recently opened, and only a small additional outlay will be required to place it in full working order.

Lot 1 comprises SEVENTY ACRES, including two cottages, occupied by Mr. Charles Withey, Mr. Chard, and Mr. Carp; and produces a present rental of 92l per annum; and

Lot 2, NINE ACRES of RICH PASTURE, let to Mr. R. Batt, at 20l per annum, both forming solid landed investments, with the valuable prospective advantages, in addition, of the Rich stone ledges in the Quarry. The views from the summit of the hill can hardly be exceeded in extent and beauty.

Particulars with conditions of sale and plans may be obtained of Mr R. Batt, Dundry, who will show the Estate; of Messrs. Ashmead and Son, Surveyors, Bristol; of Messrs. Cobson, Norwich; of Mr. J. G. Hobbs, Solicitor, Bristol; and at Mr. Debenham's Auction and Estate Agency Offices, 80, Cheapside, London, where also specimens of the stone can be seen.

Freehold Building Land, nine miles from London, in the County of Middlesex.

MESSRS. WINSTANLEY are instructed to offer for SALE by AUCTION, at the MART, on MONDAY, the 30th of JUNE, and if not then disposed of, on the following Monday, the 7th of JULY, a PLOT of BUILDING GROUND, land-tax redeemed, and free of rent (the purchase money may remain), situate on the north walk of the Norwood Station. The great facilities afforded by the London and Epsom Railway to this locality, coupled with its close proximity to the Crystal Palace, render it a most desirable, eligible for building purposes. The land will be sold in the same entirety or plots suited to the erection of gentlemen's villas. Half the purchase money may remain on mortgage. For further particulars and terms, apply to Messrs. WINSTANLEY, Paternoster-row.

FREEHOLD GROUND RENTS in the COUNTY of MIDDLESEX, amounting altogether to 70 per annum, and several Freehold Houses in Kingsland.

MESSRS. WINSTANLEY have received directions from the Executors to SELL by AUCTION, at the MART, on MONDAY, the 30th of JUNE, and if not then disposed of, on the following Monday, the 7th of JULY, the FREEHOLD PROPERTY; consisting of about 300 Dwelling-houses, Public-houses, Shops, and Wharfs, situate on the Tile Kiln and Coldharbour Estates, in the Hackney-road, viz.: in Trafalgar-place, Esq. Cambridge-place, York-place, Thorne-street at Upper Barton-street, York-street North, Cross-street, Great and Little Cambridge streets, Herbert-street, Edith-street, Windmill-street, Brunswick-street, Wenlock-terrace, Cumberland-street, Kingsland-street, Waterloo-place, Bath-place, &c. Some of the leases have only short terms to run. The ground-rents are well secured, and the lots vary from 8l. to 50l. per annum, and amount to about 5l. per annum. Particulars with plans may be had previous to the sale; to be then obtained of HARRISON RHODES, Esq. Solicitor, Davies-street, Berkeley-square; of Mr. Boston, Estate Office, Tile Kiln, Hackney-road; the Place of Sale, and of Messrs. WINSTANLEY, Paternoster-row.

OXFORD-MARKET.—Materials of the Elephant and Castle Public-house, Hunslow.

MR. A. RICHARDS, on the PREMISES, on MONDAY, the 23rd of JUNE, at TWELVE, comprising capital STOCK, brickwork, floor-boards, joists, rafters, and quartering, fittings, pewter-top counter, pipes; quantity of lead, in ci-terns, gutters, and pipes; sheet copper panties, York paving, stills, and coping, and a variety of materials. May be viewed the morning of Sale. Catalogues obtained on the Premises; and of the Auctioneer, Tottenham.

SALES BY AUCTION.

TO TIMBER MERCHANTS BUILDERS, WHEELWRIGHTS, PATTEN-MAKERS, and OTHERS.—1,000 Oak Timber Trees and Fellers, 2,000 Oak, Beech, and Birch use Poles, 760 House Parrels, 2,300 Hurdles, 17 Cords of Wood.

MESSRS. CHARLTON are favoured with instructions from Robert Bowman, Esq. to SELL, the above by AUCTION, at the GRANGE FARM, Hadlow, Kent, about two and a half miles from the Railway Station at Tonbridge, on FRIDAY, the 27th JUNE, 1856, at TEN o'clock in the forenoon, in suitable lots.—Catalogues may be had of the bailiff, on the Premises; at the Inns in the neighbourhood; Angel, Tonbridge; or of Messrs. Charlton, Auctioneers, Surveyors, and Estate Agents, Tonbridge.

TO BUILDERS, CARPENTERS, AND OTHERS. Timber Sale at Peckham.—On MONDAY, JUNE 23, at TWELVE o'clock, by order of the Contractors.

MESSRS. BARTON and SON will sell by AUCTION, opposite the Police-station, Huch-street, Peckham, upwards of 300 prime lots of BUILDING MATERIALS (pulled down from several city offices and warehouses to make room for improvements, and removed here for convenience of sale). There will be timber, fittings, stone, slates, iron, and an immense lot of useful and convertible materials.—Catalogues ready, and to be had on the ground.

THE HARROW FREEHOLD LAND TONTINE, to be established under a Deed of Settlement, to be enrolled in the High Court of Chancery. Capital, 84,000l. in 4,000 Shares of 21l each, payable by instalments.

Joseph Radford, esq. 22, Gloucester-road, Regent's-park.

BANKERS.—The London and Westminster Bank.

ARCHITECT.—C. Octavius Parnell, esq. 50, Pall-mall.

SURVEYORS.—Messrs. Chinnocks and Galsworthy, 23, Regent-street.

SOLICITORS.

Messrs. Pickering, Tompson, and Co. 4, Stone-buildings, Lincoln's-inn.

SECRETARY.—John Bennett, esq.

TEMPORARY OFFICES.—6, Lyddle-hill.

IMMEDIATE ADVANTAGES WITHOUT RISK.

The promoters of this Tontine have secured a valuable estate, consisting of 150 acres of very superior freehold land, in the county of Middlesex, forming one of the Headstone domain, eleven miles from London, and contiguous to the Harrow Station on the London and North-Western Railway, with the view of building thereon villa residences, of the yearly value of 80l. each and upwards, fit for the reception of wealthy residents and respectable families of moderate income, whereby it is estimated a return of 9l. per cent. per annum will be secured upon the capital employed.

Residents will be entitled to the valuable privileges of Harrow School, which is within an easy walk of the estate; and the London and North-Western Railway Company offer to those persons who shall erect houses of approved elevation on this estate, and of the annual value of 80l. and upwards, one first-class free pass between the Harrow Station and Eastcastle-street, for the occupier for the time being of each of such houses, during a period of eleven years.

Water in abundance, and of most excellent quality, is obtainable within a few feet from the surface of the land.

The shareholders will be entitled, during the lives of their respective nominees, to share in the annual profits of the undertaking, until seven-tenths in number of the then originally-nominated shall have fallen in, when the entire property of the Tontine will be divided among the then remaining shareholders; and until such division they will have a chance (if no villa shall think fit) of becoming an occupier, at a moderate rent, of a villa to be erected on the estate, and of obtaining, without cost, the privileges of a free pass as before mentioned, and likewise of enjoying the privileges of Harrow School.

Every shareholder will be entitled to nominate one life, of any age, with state of health, and the survivor of such life or lives for several shares so held by him, and the nominee will be restrained by the deed of settlement from incurring liabilities beyond the amount of the funds for the time available for the purposes of the Tontine, whereby the shareholders will incur no risk beyond the amount of the shares subscribed for.

Applications for shares must be addressed to the Secretary, or to the Solicitors of the Company, in the form hereto annexed, and must be accompanied with a deposit of 1l. for every share applied for, which will be returned to the applicant with respect to such shares as shall not be allotted to him, and should all the shares in the Tontine not be allotted, the whole of such deposits will be returned without any deduction whatever.

The residue of the sum payable on the respective shares shall be paid by monthly instalments of 1l each, to be called in from the date of the allotment thereof.

Arrangements have been made with most respectable and responsible insurance offices to insure the lives of nominees at a moderate annual premium; and which insurances may be effected at the offices of the Tontine—whereby shareholders may guard against the possibility of loss, while they will enjoy the chance of gaining a large profit upon their investment.

FORM OF APPLICATION FOR SHARES.

THE HARROW FREEHOLD LAND TONTINE.

I do hereby request you to allot me ..... shares in the above-mentioned Tontine; and I undertake to accept such shares, or any less number that may be allotted to me, and to acquaint you with the names and full particulars of my nominee or nominees upon receiving notice of such allotment.

Dated this ..... day of ....., 1856.

CONTRACTS.

BOROUGH of SUNDERLAND.—SEWERAGE WORKS.—CONTRACT No. 1.—To BRICK MANUFACTURERS and OTHERS.—The Corporation of Sunderland are desirous of receiving TENDERS for the manufacturing and delivering in a depôt within the borough of Sunderland, the BRICKS necessary for the construction of the brick sewers, cess-pits, side entrances, &c. in connection with the said works. The quantity of bricks required will be about two and a quarter millions, including square bricks and bricks to different radiuses for upwards of eight miles of sewers. Further particulars may be known on application to WILLIAM CROZIER, C.E. Borough Engineer, at the Offices, East Cross-street, Sunderland, to whom Tenders are to be sent on or before the 9th day of JULY, 1856, endorsed, "Tender for Bricks." The Corporation do not bind themselves to accept the lowest or any Tender.
WILLIAM SNOWBALL, Town clerk.

BOROUGH of SUNDERLAND.—SEWERAGE WORKS.—CONTRACT No. 2.—To STONEWARE PIPE MANUFACTURERS and OTHERS.—The Corporation of the Borough of Sunderland are desirous of receiving TENDERS for the manufacture and delivering in a Depôt within the borough of Sunderland, the STONEWARE PIPES, Bends, Junctions, Invert Blocks, Junction Blocks, &c. necessary for carrying out the Sewerage Works of the borough. The works comprise the necessary pipes, bends, junctions, &c. for about 12½ miles of pipe sewers from 6 to 18 inches in diameter, irrespective of private works; the necessary junction and invert blocks for eight miles of brick sewers, and other articles in stoneware which may be required in carrying out the said works. Further particulars may be known on application to WILLIAM CROZIER, C.E. Borough Engineer, at his Offices, East Cross-street, Sunderland, to whom Tenders are to be sent on or before the 9th day of JULY, 1856, endorsed "Tender for Stoneware Pipes." The Corporation do not bind themselves to accept the lowest or any Tender.
By order, WILLIAM SNOWBALL, Town Clerk.

TO ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS, DRAINAGE, and FENCING, on the MALDON ESTATE, Essex. The drawings and specification may be seen at the Offices of Mr. HENRY CODD, Solicitor, Maldon; of the Surveyor, Mr. GEORGE MORGAN, 33, Norfolk-street, Strand, London, on and after THURSDAY, 19th JUNE, 1856, between the hours of ELEVEN and TWO. Tenders are to be delivered on or before TWELVE o'clock, on FRIDAY, JULY 4th, to the Surveyor, at his Offices, and endorsed "Tenders for Roads, &c. Maldon Estate."—The Executive Committee do not bind themselves to accept the lowest or any Tender.
CHARLES LEWIS GRINSTEAD,
33, Norfolk-street, Strand, London.

CONTRACTS.

TO CONTRACTORS for PUBLIC WORKS. The Local Board of Health of Hastings give notice, that they are prepared to receive TENDERS from competent persons for the DRAINAGE of part of their district. The Contract will comprise the CONSTRUCTING and LAYING of about fifty yards of 4 feet CAST-IRON CULVERTS; 100 yards of 15-inch CAST-IRON PIPES, all provided by the Local Board; about 2,147 yards of BRICK SEWERS, from 1 foot 8 inches to 4 feet; and about 1,427 yards of GLAZED STONEWARE PIPES of sizes from 9 inches to 15 inches. Also the necessary Gullies, Ventilating Shafts, Side Entrances, and Tide Flaps. The specification and conditions of Contract and Tender, with printed form of Tender, may be obtained upon payment of five shillings, and the plans, sections, and drawings, may be inspected at the Office of the Town Clerk, High street, Hastings, between the hours of TEN and FOUR, on and after the 7th instant. The Local Board will require the works to be completed within six months from their commencement; and they do not bind themselves to accept the Lowest or any Tender. Sureties will be required. Sealed Tenders on the forms supplied by the Local Board, properly indorsed and addressed to "The Hastings Local Board of Health," must be delivered at the Town Clerk's Office, Hastings, before TWELVE of the clock at noon of FRIDAY, the 25th day of JULY next.—By order of the Local Board
JOHN G. SHORTER, Town Clerk.
Hastings, June 9, 1856.

TO BUILDERS.—Persons desirous of CONTRACTING for the ALTERATION of the GRAMMAR-SCHOOL, and the ERECTION of a new RESIDENCE for the Head Master, at Kettering, in the county of Northampton, may see the plans and specification and obtain a bill of the quantities at the Office of Mr. E. F. LAW, Architect, Northampton. The TENDERS are to be delivered to the Architect on or before SATURDAY, the 5th day of JULY next.
N.B. The Trustees do not pledge themselves to accept the lowest Tender.
E. F. LAW.
Priory Cottage, Northampton, June 17th, 1856.

COMPLETION of ROCHESTER-BRIDGE. REMOVAL of the ANCIENT STRUCTURE and FORMATION of QUAY.—The Wardens and Assistants of Rochester-bridge will be ready on TUESDAY, the 24th day of JULY, 1856, at the Bridge Chamber, in Rochester, to receive TENDERS from persons willing to undertake the TAKING DOWN of the present STONE BRIDGE of ten arches across the river Medway there, with its piers, foundations, and abutments, and the removal of the materials, and of all local impediments caused thereby to the navigation of the river; and also the constructing of an embankment or quay, on the Rochester side of the river, in the direction of the castle. The parties tendering are required to state their terms for the whole undertaking of removal and construction. Plans, drawings, and specifications of the intended works may be seen at the Office of the Resident Engineer, in Strood, on any working day between the hours of TEN and FOUR, when and where all requisite particulars may be ascertained. Sealed Tenders for the above works are to be delivered at the Bridge Chamber, Rochester, and marked on the outside "Tender for taking down, &c. Rochester-bridge," and "For the Embankment on the Rochester side" at or before TWELVE o'clock at noon, on THURSDAY, the said 24th day of JULY, 1856 (after which hour no Tender will be received), accompanied by a letter from one person engaging to become bound in 2,000*l.* or from two persons in 1,000*l.* each, with the party tendering, for the due performance of the contract. The Wardens will not hold themselves bound to accept any Tender unless fully approved by them.—By order of the Wardens and Assistants,
GEORGE ESSELL, Bridge Clerk.
Rochester, June 12th, 1856.

ROMSEY, HAMPSHIRE.—To BUILDERS and OTHERS.—The Burial Board of the Parishes of Romsey Extra and Romsey Extra are desirous of receiving TENDERS for building on their new burial ground TWO CHAPELS and a LODGE, and also for constructing the Boundary Walls, with Entrance-gates, according to plans and drawing prepared for that purpose by Mr. E. W. LOWEN, of No. 60, Kingstreet, Mitchell's, London, the architect, to whom application may be made. The plans, drawings, and specifications may be seen at my Office in Romsey, between the hours of TEN and FOUR, on and from the 30th of JUNE instant, until the 5th of JULY next; and the Board will not object to receive Tenders from the separate trades, or for the whole or any part of the works. Parties desirous to tender themselves to accept either of them, or the lowest Tender. Sealed Tenders are to be forwarded to me before FIVE o'clock in the afternoon of TUESDAY, the 8th of JULY next, marked, "Tender for Cemetery." Security for the due performance of the work to be prepared at the expense of the contractor) will be required.
C. L. LORDAN, Clerk to the Board.
Romsey, June 13, 1856.

THE LUTON LOCAL BOARD of HEALTH are prepared to receive TENDERS for BUILDING an INTERCEPTING SEWER and other DRAINS connected therewith, and for ERECTING the TANKS, ENGINE-HOUSE, and other WORKS required for deodorizing and precipitating the sewage of the township, according to the drawings and specification, which may be seen at the Engineer's Office, after MONDAY, the 30th inst. and printed copies of the specification, conditions, bill of quantities, and form of Tender may be had on payment of 10s. 6d. by applying to Mr. T. L. EVANS, C.E. at Luton. Tenders, sealed, addressed to the Chairman, endorsed "Tender for Sewerage Works," must be delivered at the Office, before SIX o'clock on TUESDAY, the 8th day of JULY.
Dated June 18th, 1856. GEORGE BAILEY, Clerk.

TO BUILDERS.—PAVEMENT CHAPEL, New North-road, Hoxton. ALTERATION and ENLARGEMENT.—The Building Committee is willing to receive TENDERS for the WORKS, which are intended to be commenced as soon as possible. The plans and specification can be seen, and the quantities obtained, at the Office of Mr. CHARLES EARLE, Architect, &c. Poultry, by application on or before MONDAY, 30th JUNE. The Committee will not bind themselves to accept the lowest or any Tender, unless satisfactory.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office, Dublin, 13th June, 1856.—The Principal Officers of Her Majesty's War Department hereby give Notice, that they will receive proposals for the following CONTRACT, viz.:—For RAISING the present WATER-POWER, and FIXING CLOCK therein, at the Temporary Barracks, Curragh of Kildare, in the Curragh District. Persons desirous of tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and at the Royal Engineer's Office at the Curragh, and may obtain specifications, with the terms of Contract. The whole of the work to be complete and within one hundred days after the date of order to proceed with the work. The letters of Tender with specifications to be sealed, and transmitted under cover to "The Director General of Contracts, War Department, Pall-mall, London," so as to be received on or before the 1st day of JULY, 1856, and to be marked on the outside "Tender for work at the Curragh of Kildare."

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives notice that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall-mall, on or before the 8th JULY next, for STRIPPING and RESLATING part of the CAVALRY BARRACKS at Windsor. Printed schedules and forms of Tender may be obtained at the Royal Engineer's Office, 11, James-street, Pimlico; or of Mr. HARRISON, at the Barrack office, Cavalry Barracks, Windsor, between the hours of TEN and THREE o'clock from the 30th JUNE to the 14th JULY next, inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.
Royal Engineer's Office, 11, James-street, Pimlico, 24th June, 1856.

NOTICE is hereby given, that on MONDAY, the 7th of JULY next, I shall be ready at my Office, to receive sealed TENDERS from such persons as may be willing to UNDERTAKE the DREDGING and REMOVAL of MUD, for the improvement of Portsmouth Harbour. Drawings and specifications can be seen at the Office of the Clerk of Works, in this Dockyard, where all necessary information on the subject may be obtained. I do not bind myself to accept any Tender, nor any Tender. No Tender will be received after the above-named day.
Dated at Her Majesty's Dockyard, near Portsmouth, the 24th JUNE, 1856.
J. W. MARTIN Admiral Superintendent.

NOTICE to BUILDERS.—Such Persons as may be desirous of CONTRACTING with the War Department for CONSTRUCTING a BATARDEAU and SLUICE and DEEPENING the APPROACHES at the EMBARKING STEPS at GOSPORT, in the County of Hants, are requested to send in sealed TENDERS, addressed to the Director-General of Contracts, War Department, Pall-mall, London, on or before the 30th JULY next. Plans and specifications of the above works, with forms of Tender and any information relating thereto, can be obtained at the Royal Engineer Office, Portsmouth, on any day (Sundays excepted), between the hours of TEN and FOUR, from 1st to 11th JULY, 1856.
N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Portsmouth, June 24, 1856.

NOTICE to BUILDERS and CONTRACTORS.—CONTRACT for REPAIRING certain PORTIONS of the RIVER FACE of QUEENBOROUGH WALL, and the TOP of the RIVER EMBANKMENT, from the RIGHT DEMARCATION to the GOVERNMENT BOUNDARY at SHEERNESS.—The Commanding Royal Engineer gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before THURSDAY, the 10th of JULY, 1856, from such persons as may be desirous of CONTRACTING with the War Department for Repairing certain portions of the River Face of Queenborough Wall, and the Top of the River Embankment, from the Right Demarcation to the Government Boundary, at Sheerness. The plans may be seen, and printed specifications and forms of Tender obtained, by persons fully competent to undertake the work (none others need apply), at this Office, between the hours of TEN and FOUR o'clock, on TUESDAY, the 8th of JULY, 1856, Sunday excepted. The party whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of 500*l.* for the due performance of the contract. Tenders for the above works to be addressed to "The Director-General of Contracts, Pall-mall, London," and endorsed, "Tender for Repairing Queenborough Wall, Sheerness." No Tender can be admitted after the said 10th day of JULY, 1856.
N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Sheerness, June 25, 1856.

TO BUILDERS.—Sealed Tenders for BUILDING the NORTH WING of NEW BARRACKS, to be erected at Devonport; separate Tenders for the Asphalte Work, and also for Laying down Pipes and Fittings for lighting both wings of the barracks with Gas, including all requisite elements, will be received at the War Department, Pall-mall, London, on or before THURSDAY, the 31st JULY next, at noon, addressed "To the Director General of Contracts," and endorsed, "Tender for new Barracks, Devonport," "Asphalte Work for new Barracks, Devonport," or "Gas Work for new Barracks, Devonport" (as the case may be), on the lefthand corner of the envelope. The north wing of the new barracks comprises officers' barracks and model cubicles, sergeants' messes and cook-house, central building, canteen, enclosure walls, roads, parade, drains, &c. &c. Plans and specifications, with terms and conditions, may be seen, forms for Tender and bond, and furniture required at the Royal Engineer's Office, at Devonport, between the hours of TEN and FOUR o'clock on weekdays, from TUESDAY, the 1st JULY, to TUESDAY, the 29th day of JULY next, both days inclusive.
Royal Engineer's Office, Devonport, 21st June, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

THE VESTRY of the PARISH of SAINT MARY ABBOTTS, Kensington, are ready to receive TENDERS and to contract for the supply of 1,500 Yards of FLINTS, to be delivered at their Wharf, Kensington-basin. The form of Tender may be obtained, together with all particulars, on application to the Surveyor, Mr. JAMES BROADBRIDGE, at his Office, Vestry-hall. Tenders are to be sealed, and endorsed "Tender for Flints," and to be delivered at my Office, on or before FOUR o'clock in the Afternoon of TUESDAY, the 1st of JULY next. No Tender will be received except that on one of the printed forms. The Vestry do not bind themselves to accept the lowest or any Tender. The Contractor to enter into a written contract, and to bear the expense thereof.

By order, REUBEN GREEN, Clerk of the Vestry.
Vestry hall, Kensington, 21st June, 1856.

TO ENGINEERS, BUILDERS, and OTHERS. Parties disposed to offer, on or before the 12th of JULY next, DESIGNS, and TENDER for the ERECTION of a FOOT and CATTLE BRIDGE, constructed so as to convey water across the River Exe (a width of 100 feet) at Bourn, in the parish of Bickleigh (about eight miles from Exeter), are requested to apply for particulars at the Land Drainage Company's Offices, 30, Parliament-street, London; or 9, Bedford-circus, Exeter.

BIDWELL and BOOPLE, Secretaries

TO BUILDERS, ROAD CONTRACTORS, and OTHERS.—The Town Council of the Borough of Walsall are prepared to receive TENDERS for the ERECTION of a BOUNDARY WALL around the land intended to form the new cemetery in and for the said borough, extending to about 3½ acres or thereabouts. Also for the FORMING, MAKING, and SEWERING of the CARRIAGE-ROAD of 48 feet wide, and about 1,340 yards in length, from Bridgman-street, in the said borough, to the said cemetery, and for the fencing off by posts and railings of the said carriage-road from the adjoining lands according to plans and specifications which may be seen at the Office of the Town Clerk, Bridge-street, Walsall. Sealed Tenders, endorsed "Cemetery Tenders," for all or any of the above works, to be sent to the Town Clerk's Office, on or before the 9th day of JULY next. The Council do not bind themselves to accept the lowest or any Tender. By order,

SAMUEL WILKINSON, Jun. Town Clerk.
Walsall, 17th June, 1856.

THE PUBLIC HEALTH ACT, 1848.—TO CONTRACTORS and OTHERS.—The Local Board of Health for the district of Leamington, are prepared to receive TENDERS for the CONSTRUCTION of TWO COVERED RESERVOIRS (each capable of containing five millions of gallons of water), on the Newbold-hill, near Leamington, with the LAYING of a WATER MAIN, 1,130 yards in length, of 12 inches and 11 inches internal diameter, and the works connected therewith; the plans for which may be seen, and further particulars thereof obtained, on application to Mr. JOSEPH FOX SHARP, Surveyor of the Local Board, at the Office of the Town hall, Leamington; and copies of the specification and form of Tender may be obtained by applicants to the Clerk, at the Office, Town hall, on payment of 7s. 6d. each, after MONDAY, the 7th day of JULY, 1856, to whom Tenders must be forwarded, endorsed "Tender for Reservoirs on Newbold-hill," on or before MONDAY, the 21st day of JULY, 1856. The Board do not bind themselves to accept the lowest or any Tender.—By order,

R. H. DAVIES, Clerk.
Town-hall, Leamington, June 17, 1856.

MIDDLESEX and ESSEX TURNPIKE ROADS.—Notice is hereby given, that the Trustees of these Roads will meet at this office on TUESDAY, the 15th day of JULY next, at TEN o'clock in the forenoon, to consider PROPOSALS and to CONTRACT for 3,000 YARDS of BLUE GUERNSEY GRANITE, of the best and hardest quality, broken to a gauge of two inches and one-half inch, and to be free from dust; also for the Supply of 2,500 YARDS of the best picked KENT FLINTS, broken to the above gauge; and also for the supply of 2,000 YARDS of GRAVEL BALLAST, sifted through a sieve 2½ inches diameter in the clear, containing thirty-seven wires; the Trustees to be at liberty, at their own expense, to re-sift the same through sieves of 22 inches diameter, having forty-one wires, and to pay only for the quantity of ballast when re-sifted. Such materials are to be delivered alongside the wharf of Messrs. John Wesson and Company, situate on the eastern side of the river Lea, at Stratford Essex, near Bow bridge. The Trustees to pay the expense of unloading the barges. One moiety of each description of stone to be delivered within seven weeks, and the remainder within fourteen weeks from the date of the Tender being accepted: if such broken granite be not then delivered ballast are of the same and the quality contracted for, payment will be made for such materials on the 28th October next, if received by the trustees at the time stipulated. Materials delivered after the above specification will be rejected and not paid for. Should the parties tendering to supply the gravel ballast procure or have it in the County of this division of the roads, it or some must be sifted in manner before stated and be subject to be re-sifted by the Trustees, as aforesaid, and be within a convenient distance of the road where the same is to be used, which is across North-street, Whitechapel-road, and Bow Church. The Trustees do have the use of the land whereon the said gravel ballast is deposited until it may be required to be used on the road. Payment will be made for the same at the quarterly meeting of the Trustees held next after each stack has been measured. Tenders sealed and endorsed "Tender for Broken Granite," or "Kent Flints," or "Gravel Ballast" as the case may be, to be sent to this Office, on or before THURSDAY, the 10th day of JULY next, with a sample of each of the three descriptions of materials to be found by any person of depositing a sample, the Tender will not be considered. The Trustees do not bind themselves to accept the lowest, or any specific proposal that may be made to them. The penalty for not performing of the Contract is, in each case to be 20*l.*

GEORGE RACKE,
Solicitor and Clerk to the said Trustees.
Turnpike Office, Bow, Middlesex, June 14, 1856.

TO SEWER CONTRACTORS and OTHERS—MITCHAM, Surrey.—The Nuisances Removal Committee are desirous of receiving TENDERS for LAYING DOWN about 1,400 feet of 12-inch GLAZED ST. NEWARE PIPE DRAIN, and 200 feet of 9-inch BRICK SEWER. Plans and specifications will be ready for inspection at my Office on the 31st inst. Sealed Tenders endorsed "Tender for Drains," to be delivered to me at or before FIVE o'clock p.m. the 4th of JULY next. The Committee do not bind themselves to accept the lowest or any other Tender.—By order,

EDWIN CHART, Upper Mitcham,
Clerk to the Committee.
June 20th, 1856.

TO BUILDERS.—TENDERS are required for the ERECTION of FIVE DWELLING-HOUSES at BOW (Freehold), specimens of which and of contract, may be seen by application to Mr. WESLEY, No. 1, Morpeth-road, Bow.—Tenders to be delivered on or before MONDAY, 21st JULY. The parties do not engage to accept the lowest Tender.

7. Steel, Files, and Springs.
8. Tire Hoops.
9. Rivets.
10. Wire Ropes and general Hemp Cordage.

Forms of Tenders may be had on application to Mr. BARNES, Stores, Gateshead, on and after MONDAY, the 30th JUNE; and Tenders must be sent in, addressed to the Secretary at York, sealed and marked "Tenders for Stores," on or before MONDAY, the 14th JULY. The Directors do not bind them elves to accept the lowest Tender.—By order,

York, 24th June 1856. W. OBRIEN Secretary

TO BUILDERS.—Persons desirous of CONTRACTING for ALTERATIONS and ADDITIONS to Merton Church, Surrey, may inspect plans and specifications at the Office of the Architect, Mr. F. DIGWEED, 13, Queen's-square, Bloomsbury. Tenders to be delivered on or before MONDAY, JULY 7, at TWELVE o'clock at the Rectory, Merton endorsed "Tender for Church." Quantities supplied.

BUILDERS' TENDERS are required for the ENLARGEMENT of the PARISH CHURCH of ST. ANDREW, Nutfield, near Redhill, Surrey. The plans and specifications may be inspected at the Rectory, Nutfield, on MONDAY, the 30th of JUNE, and the Tenders must be delivered to the Architect, on THURSDAY, the 3rd day of JULY next, before THREE o'clock p.m. The lowest or any Tender not necessarily accepted.

JAMES G. SMITHER, Architect,
7, Duke-street, Adelphi, London.

ROYAL NORTH LINCOLN MILITIA STOREHOUSE.—To BUILDERS, BRICKLAYERS, CARPENTERS, and OTHERS.—Persons wishing to CONTRACT with the Magistrates for the county of Lincoln, for the several WORKS required to be done in the ERECTION of a STOREHOUSE at Lincoln, for the Royal North Lincoln Regiment of Militia, in accordance with plans and specifications prepared by Mr. HENRY GOWARS, Architect, of Lincoln, Architect, and which may be inspected at the Surveyor's Office, at the Castle of Lincoln, on and after MONDAY, the 30th instant, between the hours of TEN in the morning and FOUR in the afternoon, are desired to send to me sealed Tenders on or before the 10th day of JULY next, in order that the same may be opened and entered in the Minute Book of the Magistrates for the county of Lincoln, which will be holden at the County Hall on the following FRIDAY. The Magistrates will not bind themselves to accept the lowest or any Tender, unless they will require satisfactory security to be given for the due performance of the works.—By order,

FREDK. BURTON, Clerk of Gaol Sessions.
Lincoln, June 16, 1856.

TO BUILDERS and OTHERS.—The Guardians of the Poor of the parish of Saint George the Martyr, Southwark, will meet in the Board-room of their Workhouse, situate in Mont street, Southwark, on THURSDAY, the 3rd day of JULY next, at THREE o'clock in the afternoon, precisely, to receive TENDERS for the ERECTION of INDUSTRIAL SCHOOLS at Mitcham, in Surrey. The drawings and specifications may be seen, and the quantities obtained, at the Office of Mr. HENRY JARVIS, the Architect, 26, Trinity-square, Southwark. Sealed Tenders must be sent to me at my Office, before the 3rd JULY next. Security will be required for the due performance of the Contract; and the Guardians do not bind themselves to accept the lowest Tender.

JOHN HENRY FITCH, Clerk.
17, Union-street, Southwark, June 20, 1856.

TO SEWAGE MANURE COMPANIES, SCAVENGERS, and OTHERS.—The Board of Works for the Hackney District are desirous of entering into a CONTRACT for the EMPTYING of CESSPOOLS within the district, agreeably to the specifications and conditions which may be seen, and particulars obtained at the office of Mr. JAS. LOVEGROVE, Surveyor to the Board, Town hall, Church-street, Hackney, any morning between NINE and FIVE o'clock. The parties contracting will be required to empty the cesspools by the atmospheric process, viz by means of a cart, consisting of a closed air tight vessel or vessels, with flexible tubes attached thereto, the soil to be charged with the soil by the exhaustion of the air therein contained. Tenders to be addressed to Mr. RICHARD ELLIS, Clerk to the Board, Town hall, Hackney, endorsed "Tenders for emptying Cesspools." The prices to be inserted in words, at length, and to be forwarded to the Clerk on or before WEDNESDAY, the 9th of JULY next. The Board do not bind themselves to accept the lowest or any Tender.

TO BUILDERS and OTHERS.—Notice is hereby given, that the Board of Works for the Fulham District, invite TENDERS for LAYING DOWN about 1,200 of 12-inch PIPE SEWER, or thereabouts, in Bradmore, Hammersmith, and other works connected therewith in accordance with a plan and specification to be seen at the office of the Surveyor, Mr. A. C. BEAN, Bridge-road, Hammersmith. Tenders must be sent in sealed, addressed to the Chairman of the Board of Works, Broadway House, Hammersmith, endorsed "Tender for Sewers," on or before WEDNESDAY next, at FOUR o'clock p.m. The Board does not pledge itself to accept the lowest or any Tender.

By order,
June 26, 1856. W. LOVELY, Clerk.

TO BUILDERS and CONTRACTORS.—Persons desirous of TENDERING for the ERECTION of a HOUSE, with Outwork, &c. may now see the plans and specifications by applying to FRITH and SMITH, No. 1, Bateman's-row, Curtain-road, between the hours of ELEVEN and ONE, or THREE and SEVEN o'clock. All Tenders to be sent in on or before JULY 10th, 1856. F. and S. do not pledge themselves to accept the lowest or any Tender, nor will any allowance be made for estimates.

June 27th, 1856

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,

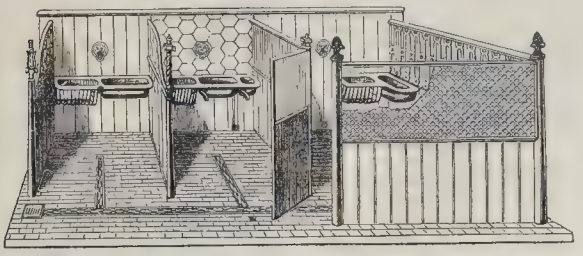
FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES

beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	.. 1¼ ..	7s. 0d.
15	.. 1½ ..	7s. 6d.
15	.. 1¾ ..	8s. 0d.
15	.. 2 ..	8s. 6d.
15	.. 2½ ..	9s. 6d.



THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent that a direct end grain of the iron is presented longitudinally, and which become, when built into the brick-work, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the last of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar Cottam's new Patent See-I-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness-holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings.

Cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

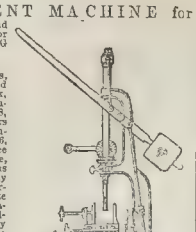
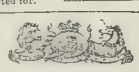
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE can be obtained of all



ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES, IN TOWN OR COUNTRY.

ESTABLISHED 1774

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.

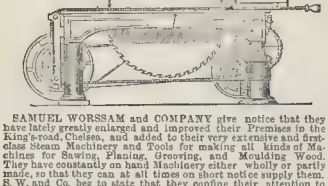


W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Cane Plates, Area Gratings, Sash Weights, Pay and Lather Wheels, Rivets, Pintons, Engine and Lathe Castings, Force Backs, Furnace Bars, Rollers, Pans, and other castings to patterns or drawings.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.



HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be efficiently warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

SAVING IN GAS.—D. HULETT, INVENTOR and PATENTEE.—The Mercurial Gas Regulator for the only efficient instrument for ensuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.—D. HULETT and CO. 55, High Holborn, London, Manufacturers Gas Chandeliers, Glass Lustres, &c &c.

TO GAS CONSUMERS and OTHERS.—ON SALE, FOUR DRY-LIME PURIFIERS, 5 feet square and 3½ feet deep, with centre valve and 7-inch connections.—Application to be made to Mr. WILLIAM KITCHEN, Manager, Gas Works, Radcliffe, Lancashire.

MACHINERY for SAWING, PLANING MOULDING, &c.

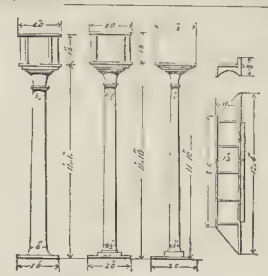
SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

WOOD-CUTTING MACHINERY, JOHN M'DOWALL and SONS, WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow, MANUFACTURERS of VERTICAL SAW-FRAMES (Driven by steam),

For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.

Patent vertical saw frames, of the foregoing dimensions, with steam-power attached, circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from a 4" an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power mortising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-board machines, for hat-boxes, &c.; patent silent feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 36 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders this firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be surpassed by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c. JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.



Elliptic Stoves, double backs, 2½d. per inch, and upwards.

MARBLE and STONE CHIMNEYS.—150 MARBLE CHIMNEYS of various designs and colours, most of them fixed, are now on view at the Cambridge Heath Marble Sawing-Mills. The proprietor has again enlarged his workshops, and erected so much improved machinery, so as not only to compete, but is able to manufacture more, and consequently cheaper than any house in the trade.
The Trade supplied.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London. THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble: bold, massive Chimney-Pieces, in Black, Black and Gold, Sardilla, Sienna, Verd Antique, Brocatella, Dove, St Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BANGOR WHARF, King's-road-bridge, Camden-town—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

STONE! STONE! STONE! — To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Self-face Slab, Granite Pitching and Curb, Guernsey Broken Road Materials, and every other description of stone, at JOHN KNIGHT and SON'S, Devon Wharf, Mile-end. York tooled paving, 38s. 6d. per 100 feet; slab for heaths, 4d. per foot sup.; slab for chimney-pieces, 3½d. per foot sup.; 8 by 3 window-sills, 6d. per foot run; 13 by 3 coping, 8d. per foot run; box chimneys (any opening), 8s. 6d. each. Terms cash on delivery.

BRAMLEY FALL! BRAMLEY FALL! On account of greater facilities than possessed by any one else, THICKETT and PERKINS are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawkesworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of the same quality as the well-known Old Bramley Fall and Horsforth Quarries, but has the advantage of being of a lighter and more uniform colour. The North-Eastern Railway Company have put sidings in on both sides of the railway. Powerful cranes are fixed, so that the stone can be got to any size, and the stone being loaded in the trucks in the railway-tracks, can be forwarded the same day to any part of the kingdom, or supplied in London river viâ Selby or Hull, in any quantity.—For particulars apply to JOHN THICKETT, Stone Merchant, Headingley, near Leeds, or to SAMUEL THICKETT, Victoria Stone Wharf, Isle of Dogs, London.

TO CONTRACTORS AND OTHERS.
YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS; Hare-hill, Robin Hood, Park Spring, and Gayby, in Blocks, Headstones, or Slabs; Purbeck Paving, Sinks, Curbs, Rickstones, Pitchers, and Squares; Caithness Flags, Firestone, Newcastle and Bilston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Cheu Stone, Bramley Fall, Bath, Huddlestone, Park-wood, and other Block Stones. Valentia Slate Slabs, Bangor Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble, in Block and Slabs, supplied from the Wharfs, Millbank-street, City Basin, and Deptford; also direct from the quarries by vessel or rail.—Address, FREEMAN'S WHARF, 97, Millbank street, Westminster.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering bases, plinths, templates, cills, corbels, imposts, cornices, copings, steps, staircases of all kinds, moulded or plain, square or spandril, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed or stowed, and delivered direct in one bottom by vessel or railway truck.—Prices and every information given on application, accompanied by plans or sketches, to SAMUEL THICKETT, Stone-wharf, Isle of Dogs, or to JOHN THICKETT, Headingley, Leeds, Yorkshire.

ANCASTER STONE. JOHN WILSON begs to inform Architects, Builders, &c. that having introduced additional and powerful MACHINERY into the ancient Ancaster quarries, he can contract to supply large quantities of WORK, daily. The durability of the ancient Ancaster stone (which has been extensively used in the erection of churches, mansions, factories, &c. and has four centuries withstood all atmospheric influence), also the great saving of labour in working, are too well known to need much comment.—Address, Mr. JOHN WILSON, Station-road, Grantham.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER. Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company Royal Charter.—For Prices, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, LONDON

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 240, High-street, Southwark, near the Townhall.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE SEVRES GLASS COMPANY.

131, UPPER THAMES-STREET.—WORKS: SEVRES, NEAR PARIS.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 45 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under oil-cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office Corsham, Wilts

PARIS EXHIBITION.—ENAMELLED SLATE—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only house who has produced this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material (handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is less than one-third the cost of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lobe tables, chiffoniers, consoles &c.; baths, baptistries, altar-tab. ds, pil sters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules and dairies. Price lists can be had on application to Mr. MAGNUS, 39 and 4, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

SLATE CISTERNS, SINKS, and every description of Slate Slab Work, best Bangor Roofing Slate or Covering.—T. B. HANNAFORD'S Priced-list, which can be had on application, will be found lower than any other Roofs covered with best Bangor Countesses within a four mile circle, 21s. per square.—Trevalun Wharf, Ratcliff-cross.

WELSH ROOFING SLATES.—TO BE SOLD, a bargain, a few CARGOES of DUCHESSES, COUNTESSES, &c. well assorted, from 50 to 100 tons.—Particulars of Messrs. WILKINSON and CO. 26, Gresham-street, City. Good bills will be taken.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Herbert Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries, Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and have kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Brahy's, Belvidere road, where terms may be obtained.

GREEN SLATE, the produce of the Tyn-y-Werglodd Quarries, is acknowledged to be far superior to any hitherto used. Blue and Purple Slate of the first quality.—Apply to Mr. HOLLYER, 1, Cushion-court, Old Broad-street; or to Mr. W. G. JENNINGS, Penrhyn Quay, near Carnarvon.

O'M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT. Whitefriars Wharf, White friars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.

½-inch white, 12s. 6d. per square; ¾-inch white, 15s. per square; 1-inch white, 18s. per square; 1¼-inch yellow, 15s. per square; 1¼-inch yellow, 16s. 6d.; 1-inch yellow, 20s.
Timber, deals, planks, &c. at the lowest remunerative prices. A liberal discount allowed on mouldings for exportation. Book of designs forwarded on application.

TIMBER SAWING-MILLS, Belvedere-road, Lambeth.—ROBINSON and BARTHAM respectfully inform their friends in the Timber and Building Trades, that they have now completed their New Mill for Sawing, Planing and other timber, and will be glad to receive their favours in this department of sawing. Full particulars will be forwarded on application, per post or otherwise. Timber up to 50 feet long can be cut at these mills.—N.B. A powerful Crane for landing timber on to carriages, at 1s. 3d. per load.

IMPORTANT to BUILDERS and PAINTERS.—Genuine White Lead, 23s. per cwt.; Linseed Oil, 3s. 8d. per gallon; Boiled Oil, 3s. per gallon; Turpentine, 2s. 7d. per gallon;
Fine Pale Oak Varnish, 7s. 6d. per gallon
For cash, at EDWARD PRICE'S Oil and Colour Warehouse, 46, Coleshill-street, Pimlico.—Every article for the trade at the lowest price.

CRAME, WHITE-LEAD, COLOUR, and VARNISH MANUFACTURER, 1, Pickering-place, Lower-road, Islington. Genuine white-lead, 23s. per cwt.; seconds ditto, 18s.; linseed oil, 3s. 10d. per gallon; boiled oil, 3s. 2d.; turps, 2s. 9d.; driers, 36s. per cwt.; stone ochre 48s.; spruce ochre, 28s.; Turkey umber, 48s.; whiting, 1s. 8d.; double size, 1s. 5d. per firkin.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 9s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

FIRST-CLASS OAK GRAINING, in Oil, at 4d per yard, in any quantity, town or country. Woods painted and decoration done.—Address, — OUX, 35, Crawford-street.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c.—A considerable reduction has taken place in the prices of French polish, white and brown hard spirit varnishes, spirit lackers, and finishing spirit. The present price is 6s. to 6s. 6d. per gallon; white French polish, 10s. per gallon; white shellac, 1s. 8d. per lb.; gums, shellacs, and acid at the lowest prices. A net cash list forwarded on application to JAMES SLIPPER, 87, Leather-lane; and 14 and 15, Dorrington-street, Holborn, London.

PAINT, certified by the Government Engineers and Contractors to be the CHEAPEST and BEST ever discovered for wood and iron, price 35s. per cwt. Apply to the London Anti-Oxyde Paint Company, D. WALKER, Secretary, 29, New Bridge-street, Blackfriars.

TO PAINTERS, BUILDERS, &c.—LIVETT, FRANK, and SON, No. 14, Borough, London-bridge, opposite the Brighton and South-Eastern Railway Stations, quote their present prices for cash—Linseed oil, 3s. 8d.; boiled, 3s.; turpentine, 2s. 8d.; oak varnish, 7s. 6d. per gallon; genuine white lead, 23s.; seconds, ditto, 21s.; best town glue, 42s. per cwt.; colours, brushes, &c. equally low.

TO ENGINEERS, ARCHITECTS, and SURVEYORS.—TO BE DISPOSED OF, by valuation or otherwise, the STOCK of INSTRUMENTS of an ENGINEER and LAND SURVEYOR, recently deceased; comprising valuable transit theodolite, with compass and universal motion in brass; Sisson's 10-inch dumpy level, with tangent screw; large box of instruments, in mahogany case; protractors, levelling staves, mounted and tracing papers, and every requisite for an engineer or surveyor's office. Any gentleman in the profession will find this an excellent opportunity of furnishing himself, as the proprietor is willing to dispose of them at a great sacrifice.—Apply to Mr. KILBURNE, Hawkhurst, Kent, who will be willing to give any information, and treat for any portion of the stock.

LEVELLING, Surveying, Drawing, Mapping, &c. Estimating, for Railway or other Works; Enlarging, Reducing, Copying, Tracing, &c. undertaken by Mr. C. B. RICHARDS late an Officer of the Metropolitan Commissioners of Sewers, Surveyors to the District Boards of Works, or Local Boards of Health, will find him a useful auxiliary, from his experience in all the details of Sewage Works.—4, Trafalgar square.

TO ENGINEERS, SURVEYORS, ARCHITECTS, &c.—A REGISTRY kept of Surveyors, Levellers, Architect and Builders' Assistants, Clerks of Works, and Draughtsmen, requiring EMPLOYMENT. Efficiency ascertained before recommended.—Apply to Mr. C. B. RICHARDS, Engineer and Surveyor, 4, Trafalgar-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES, Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing the Gentleman for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading and Tinting; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. &c. Terms.—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 34, Guildford-street, Russell-square.

LITHOGRAPHY.—Every description of Maps, Plans of Estates, Engineering, and Architectural Drawings, Bill Heads, Circulars, &c. executed with despatch, at O. MOODY'S Drawing and Printing Offices 257, High Holborn.
N.B.—Artists supplied with every requisite for Oil and Water-colour Drawings, &c.

GAS-FITTERS' MUTUAL ASSOCIATION.—The ANNUAL DINNER of the members and their friends will be held at the Plough Tavern, Blackwall, on MONDAY, JULY 7th, Dr. Ilaschoffner in the chair; Mr. D. Kitchen in the vice-chair. Tickets, including dinner and dessert, 5s. Dinner at Four for Five o'clock precisely. Tickets may be obtained at the Bar of the Plough Tavern; the George and Blue Boar, High Holborn; and of the Secretary, E. A. BUTTLY, 30, George-street, Euston-square.

THE STANDARD LIFE ASSURANCE COMPANY,
Established 1825. Constituted by Acts of Parliament.
GOVERNOR
His Grace the Duke of Buccleuch and Queensbury.
DEPUTY GOVERNOR.
The Right Honourable the Earl of Eglinton and Kilmarnock.
LONDON
CHAIRMAN OF THE BOARD.
The Right Honourable the Earl of Aberdeen.
ORDINARY DIRECTORS.
Thomas H. Brooking, esq., 4, New Broad-street.
John Griffith Frith, esq. Austin Friars.
Alexander Gillespie, esq. 3, Billiter-court.
Alexander Macgregor, esq. Upper Wimpole-street.
John Scott, esq. 4, Clyde park-street.
Sir Anthony Oliphant, C.B.
Francis Le Breton, esq. 3, Crosby-square.
MANAGER—Will. Thos. Thomson, F.R.S.E.
RESIDENT SECRETARY—H. J. and Wm. Williams.
INSPECTOR OF AGENCIES—William Bentham.
EDINBURGH—7, George-street.
LONDON, 82, King William-street.

THE NEW BUSINESS transacted by the Company during 1855 exceeded that of any Assurance Institution in the United Kingdom, the Sums proposed for Assurance during the year being £716,363 7 11
And the Assurances accepted 609,323 7 11
A BONUS was declared on 1st May, 1856, varying from 27l. 18s. to 48s. per cent. on the Sums assured, at the Fifth Declaration of Profits.

EXAMPLES OF BONUS.

Date of Policy.	Sum in Policy.	Total Bonus Addition to 1856.	Sum in Policy with Bonus Addition.
15th Nov. 1825 ..	£1,000	£1,172 0 0	£2,172 0 0
,, 1840 ..	1,000	327 0 0	1,327 0 0
,, 1845 ..	1,000	582 0 0	1,582 0 0
,, 184 ..	1,000	347 0 0	1,347 0 0
,, 1845 ..	1,000	174 10 0	1,174 10 0
,, 1850 ..	1,000	64 0 0	1,064 0 0

The Income of the Company is about a Quarter of a Million.
NON FORFEITURE OF POLICIES.
Important resolutions have been adopted as to Non-Forfeiture of Policies within thirteen months from the date of payment of the premium under certain conditions.
SELECT ASSURANCE COVERING FOREIGN RESIDENCE WITHOUT EXTRA PREMIUM.
Policies of five years' duration are admissible on this class at the discretion of the Directors.
SURRENDER VALUES.
A Liberal Surrender Value is allowed after payment of One Annual Premium for Policies on the With Profit Scale, and after Three Premiums on the Without Profit scale.
Persons proposing to effect Assurance are invited to examine these important and peculiar conditions by application to the Company's Office, where the fullest information may be obtained.
H. JONES WILLIAMS, Res. Sec.
London, 82, King William-street.
Copies of the Report of the Proceedings at the Meeting of 1st of May, 1856, are now ready, and can be had at the Office.

ANCHOR ASSURANCE COMPANY, for LIFE, FIRE, ANNUITIES, and ENDOWMENTS.
Capital ONE MILLION. Established 1843.
Chief Offices, 67, Cheapside, London.
Chairman—WILLIAM LEE, Esq. M.P.
Every description of Life and Fire Assurance, Annuity and Endowment Business, transacted at the most moderate rates of premium. Fire Risks surveyed, and Estimates given without charge. THOMAS CAVE, Managing Director.

The Builder.

VOL. XIV.—No. 699.

EVERY cathedral town in England will afford matter of interest to those of our student readers who, now that we have excursion weather, are seeking new lands to conquer; but few of them will be found more instructive and delightful than Lincoln. It is full of thought-inducing remnants: the Roman, the Saxon, and the Norman have each left stone records of their presence, and the cathedral, commenced by the last-named, exhibits wonderful specimens of all the mediæval styles up to the time of their decay. Lincoln was at one time a watery place. *Lhin*, for lake or water, and *dun*, a fortress or hill, give us the *Lindum* of Latin writers: and from *Lindecollina* and *Lindocollyne*, as it was sometimes written by later annalists, we soon get to Lincoln. Industry and knowledge have transformed the marshes which formerly surrounded the city into corn-producing and valuable land. "I hard say," writes Leland, "that the lower parte of Lincoln town was al marisch, and won be policy, and inhabitid for the commoditie of the water." The castle is placed on a hill, where, too, stand the cathedral and the more ancient portion of the town, while on the land thus won in the valley grew up the "lower town."

The Roman north gate (the centre arch and one side-arch remaining) is the most perfect antiquity of its kind in the kingdom. Standing as it does over a thoroughfare, it is exposed to many casualties, and should have careful attention. Not far from it there is a mass of the ancient wall, standing in a field, apparently well tended, for which the owner, Mr. Keyworth, deserves thanks. The wall and ditch anciently passed where now stands the lower, or eastern transept of the cathedral, and this may account to some extent for the disruption of parts of the structure there. Of the fine position of the cathedral every one has heard. Placed on the hill, it stands high above the houses of the lower town, and is seen for miles around. And what a structure it is! with stronger claims for admiration, we are disposed to think, than even that of York. Look at the majestic west front where the central portion, the semi-circular work of Remigius, dating from about 1086, is added to, and surrounded by the Early English work of Bishop Hugh, put up at the end of the following century, and quite the beginning of the thirteenth. Norman sculptures give additional interest to this front: the range of statues over the central doorway represent eleven kings of England.

Milner, speaking of the rebuilding in the Pointed style of the eastern part of Canterbury Cathedral, remarks that "the style thus adopted in the first metropolitan church of this kingdom was followed by the suffragan cathedrals as soon as any of them stood in need of rebuilding or repairing. Lincoln," he continues, "led the way about the year 1195, under the direction of the illustrious St. Hugh, who undertook the whole of this vast cathedral, and who was so intent upon the work that he carried stones and mortar on his own shoulder for the use of the masons."

Then look to the beauty of the east end, externally geometric in style, where the Chapter House, with its high pointed roof and its flying buttresses far outstanding, clumsy as the latter device may be in a constructional point of view, lends additional beauty to the picture. Notice, too, the central tower soaring up to the sky, and once surmounted by a spire.

The glory of the cathedral internally is the presbytery, the extreme east end beyond the choir, the beauty of which is marvellous. This was not entirely finished in 1306. The angels in the spandrils of the triforium arches and other of the details, will be found in the Mediæval Court at Sydenham. In the original, from pavement to roof, there is beauty. A cast of the "Holy Sepulchre," from the choir of the cathedral, is also at Sydenham.

The rose window of the main south transept is especially noticeable as a specimen of Decorated tracery: we gave an engraving of it some years ago.* The stained glass in this is gem-like and beautiful in the extreme. The glass in the lancet windows under is also good. The glass in the rose window of the north transept has been satisfactorily repaired and perfected lately by Messrs. Ward and Hughes. In the south aisle three memorial windows have been put up,—by Messrs. Powell (the easternmost), Mr. Wailes, and Messrs. Chance, respectively. In Mr. Wailes's window the colour is indifferent, or, at all events, looks so where it is placed; nevertheless, as a whole, it would seem to be the best of the three. Eight windows, we were told, are in preparation for the south arm of the small transept, to serve, together with a recumbent figure, by Mr. Westmacott, as a memorial of the late bishop. It is to be hoped that Mr. Westmacott's figure will assimilate in character with the building: a monumental tablet, in memory of some of our brave soldiers, by Mr. Richardson, put up at the west end, does not, and in consequence is unsatisfactory.

Returning, however, to the glass, we have to mention the east window, recently executed by Messrs. Ward and Hughes, at the cost of 1,060*l.* and wherein Messrs. Powell's glass is employed. This must be considered a very remarkable work, although not free from defects. It purports to set forth the Scheme of Human Redemption in a numerous series of panels. Twenty-eight of these, circular in form, are placed in the form of a cross up the centre and across the window: twenty others, of another shape, enclose the cross in a parallelogram; and the spaces between the cross and the square are occupied by sixteen smaller panels. The panels forming the cross contain scenes from our Saviour's life, the Adoration of the Magi, the Transfiguration, Temptation, and other events. The Fall of Man and its result provide subjects for the panels composing the square,—for example, the Expulsion; the type of the Great Sacrifice, the offering of Isaac by Abraham; and the type of the Atonement, the setting free of the Scape Goat and the destruction of the other goat, mentioned in the 16th chapter of Leviticus. In the whole there are sixty-four subjects. Seen close, this window is much too blue, and greatly wants white light. The desire of the artists in adopting this tone was probably to increase the apparent length of the church from the choir; and, seen from the gallery in the upper part of the west end of the church, the desired effect is gained.

When the visitor is in this gallery, he will not fail to see the Stone Beam, as it is called, a flat arch 27 feet 11 inches long, 1 foot 9¾ inches wide, 11 inches deep, and with a rise of 1 foot 2⅛ inches, which springs from tower to tower over the vaulting of the nave, and has puzzled all investigators. It vibrates considerably when jumped upon, and is accordingly made to undergo this ordeal constantly. This should now be prohibited.

When the visitor comes down on the north side of the west end, he will find that the verger, James Clark, can supply him with casts of many of the smaller sculptures about the cathedral; some from the misereres of the choir, where, by the way, the canopies of the stalls are exquisitely carved.

To mention everything that is interesting here we do not pretend: we will but note some ironwork in the choir: Bishop Longland's monument in the south aisle of the presbytery, with its punning inscription, "*Longa terra mensuram ejus Dominus dedit;*" the Galilee Porch on the west side of the south transept, which has been restored, not quite satisfactorily; the little monument in the south aisle of the choir, attributed to the child Hugh, and then pass to another part of the city.

According to tradition, the boy Hugh was crucified by the Jews of Lincoln in 1255, in derision of the Saviour. One version of an ancient ballad, founded on the occurrence, sets forth that, playing at football with his playmates, Hugh drove it "throuch-and-thro' the Jew's window," and that the Jew's daughter decoyed him into the house, when he went to ask for it:—

"She's led him in through ae dark door,
And sae has she thro' nine;
She's laid him on a dressing table,
And stickit him like a swine.

* * * * *

She's row'd him in a cake o' lead,
Bade him lie still and sleep;
She's thrown him in our Lady's draw-well,
Was fifty fathom deep.

When bells were rung, and mass was sung,
And a' the burns came hame,
When every lady gat hame her son,
The Lady Mary gat nane."

True or false, the story will serve to lead us naturally to what is called the Jew's House, a very curious specimen of Norman domestic architecture, at the foot of the hill. This is in two stories, with arched and ornamented openings. It is so interesting a specimen that the corporation should buy it, with a view to its preservation: the more so as it appears to be getting into a very bad state. It might be connected with the charities of the city, and made to serve as an almshouse, or used for some municipal purpose. Near it is another Norman house, and in the lower town, near the railway station, there are considerable remains of a building, erroneously called John of Gaunt's Stable, of the same period and style: the string course is elegant. John of Gaunt's Oriel Window has become well known through Sydenham: we have given an engraving of it in a previous volume.

Close by is the church of "St. Peter, at Gowts," the second title of which speaks of the drainage of the land. A gowt is a sluice, used in embankments against the sea, for letting out the land waters when the tide is out, and preventing the ingress of the salt water, in fact, a go out. This tower shows some of those peculiarities which distinguish a class of buildings which have been called Saxon,—the peculiar capital of the centre column in the belfrey windows, and the occurrence of "long and short work" in the masonry. And although it is maintained by some authorities that the lower town where St. Peter's stands, was formed on land won from the marches after the Conquest, we should hesitate before removing this tower from the list of Saxon structures. As we are now at the Station, we will not go back to speak of the Guildhall, or Stone Bow, as it is called, spanning the High-street, or the Conduit, or any of half-a-dozen other interesting matters. We have surely said enough to mark out Lincoln as a place to be visited by those of our readers who have not seen it.

The aspect of the country, too, just now, is magnificent; it presents a blaze of colour, preaching a strong lesson to the drab and white-

* See also "Buildings and Monuments, Modern and Mediæval," p. 85. In this also will be found views of the East End, p. 85, and of the Chapter House, p. 22. Eleven pages of illustrations of Lincoln Cathedral, with descriptions, will be found in Mr Britton's well-known fifth volume of the "Architectural Antiquities." And there are some interesting views of the town in the same author's "Picturesque Antiquities of the English Cities."

wash school. There is clover here, daisies and buttercups there, and May everywhere; the hedges are literally covered with it. Some of the smaller fields show a sheet of yellow blossom. Broom decks one cutting and gorse another; while a scarlet poppy here and there contrasts with the brightness of the green wheat. The pear-trees are in blossom too, and every garden you pass is getting full of flowers. Who will venture to call these super-added charms, these "children of showers and sunny beams" useless? Is delight nothing? Is a cheerful and thankful heart no result?

The old workers in stone and wood thought differently, and nowhere have they shown this more clearly than in Lincoln Minster.

CLOSING MEETING OF THE INSTITUTE OF ARCHITECTS.

CHAIRMAN'S ADDRESS.

AT the closing general meeting, held on Monday evening, the 16th inst. Mr. Tite, M.P. vice-president, in the chair, Sir John Benson, of Ireland, attending for the first time since his election, was admitted a member: Mr. William John Green was elected an associate.

A paper was read by Mr. Winston, "On the Resemblance between Mediæval and Classic Art, as exemplified in the Glass Paintings of the Twelfth and Thirteenth Centuries," to which we shall return.

The Chairman said that he was requested to mention, for the purpose of obtaining the support of the members of the Institute, the fact that the Architectural Exhibition proposed to make another collection, which, he hoped, would be equal in interest to the one just closed. This collection would be opened to the public from the 17th December till near the end of February, and he trusted the gentlemen present would readily contribute drawings to an exhibition which had done so much for the advancement of professional knowledge, and was so highly creditable to the profession. The chairman then begged to say one word in reference to himself. He had had the honour of opening the present session of the Institute with some remarks which were received more kindly than they deserved, but which had led to another class of remarks, in which he appeared to have been misunderstood, and he wished particularly to refer to the latter, as he was exceedingly anxious to stand well with the younger members of the profession. In the outset of his address of the 19th of November last, he had mentioned, in terms which he intended to be complimentary, *the Architectural Association*. He could really only repeat what he had then said—that he thought an association of that kind deserved to be encouraged, and he had done his best to encourage it. He had gone there at some inconvenience on a most tempestuous night, and felt much interested in all he heard. It was a step in the right direction, and the desire of the members for a diploma was, in his opinion, much to be commended. He was sorry, therefore, that anything he had said or was supposed to have said should have been misunderstood. Some gentlemen of that Association seemed to think that he had spoken slightingly of it, but he had no such intention. In early youth, his friend Mr. Donaldson, with himself and some other young architects had endeavoured to associate with similar objects; he therefore felt especially interested in the Association, and he only wished the members of it would do as he had done in subsequent years, that is, join the Institute, and thus constitute one body instead of two. He thought that suggestion was worthy their consideration, and if he did not think well of them he certainly should not invite them to join the Institute. He regretted that he had been misunderstood, as he had a sincere regard for all young students, and especial sympathy for all who wished to embark in so difficult a profession as architecture. There was another subject to which he had ventured to allude at the opening meeting, namely,—the cultivation of Mediævel to the neglect of Classical architecture, and he was extremely sorry that their vice-president, Mr. Scott, was not present, in consequence of an engagement at St. Alban's. If he (the chairman) had been sure that his other duties would have enabled him to attend this evening, he should have given that gentleman notice of his intention, because some remarks of Mr. Scott's had been read when he (the chairman) was absent, in reference to the subject, and had been issued to the members through the ordinary channel. On this communication he wished to make some observations, which he hoped and believed might not be unacceptable to the meeting. Mr. Scott's letter was called, "A reply to some remarks made at the ordinary general meeting, November 19th, 1855." Now, in that letter Mr. Scott remarked that—"In a society which supposes each of its members to hold his own individual opinion, and to express them freely as he pleases, it may appear unnecessary to notice mere manifestation of feelings which every one knows our respected friend entertains; but coming *ex cathedrâ* from the Chair of our Institute, and from our parliamentary representative, they may, if unanswered, appear to acquire more weight than belongs to them, and be viewed not as the feelings of an individual member only, but as those of the Institute as a body; in which case it would naturally become the duty of those who hold contrary opinions to make a formal protest, or to separate themselves from the society." This passage contained two suggestions from which he (the chairman) must dissent. He had the honour of representing a large constituency, but certainly not the architects of England nor the Institute, and anything he might say there or in another place should only be received as the expression of his individual opinion. If he came forward officially as chairman, and stated that he was instructed by the council to say this or that, the case would be different, but at the opening meeting he merely expressed his own opinions, opinions for which he held himself responsible, and with which the Institute, as a constituted body, had nothing to do. To return to the question at issue, he must be allowed to be again guilty of the sin of telling the younger members of the profession what he was most desirous they should learn,—namely, that while they were studying Mediæval architecture, they should not forget that there was such a thing as Greek or Italian architecture; and he could not enforce this point more than by reminding them that the Royal Academy medal had not been competed for, apparently in consequence of the study of Mediæval architecture having been pushed, as he thought, to a dangerous extent. He would not renew the vexed question as to which was the best style of architecture for modern purposes. He, as every other man, had his own opinion on that, but he would say as a Protestant, that a Protestant church ought to be convenient for the services for which it was intended; and it did appear to him that many modern Mediæval churches were not well adapted to the main purposes for which they were intended. In his former remarks he had quoted a high authority, that of Mr. Petit, which he begged to quote again. Mr. Petit observed, "There are good reasons why we should rather make the best of our old churches, than materially alter them or destroy them to build others in their room: the impression they are calculated to produce more than compensates for some inconvenience in their form or arrangement; but there seems no reason why we should ever plan or build a new church of an inconvenient form, or in any way unsuited to our manner of worship. If, for instance, it is desirable that all the congregation should be within sight and hearing of the minister, why should a church ever be built in which a part of the congregation is hidden from him when he performs any part of the service in the usual place? And this must be the case in every church having aisles which terminate at the division between the nave and chancel. If we find that galleries are useful and convenient, why should we build churches that will not bear galleries, or to which they are a disfigurement? If we professedly adopt high-pitched roofs as suitable to our climate, why should we ever combine them in such a manner as to leave a lodgment for snow or rain? There may be difference of opinion as to the advantage of an unbroken area, or the expediency of galleries; still they serve my purpose in illustrating the proposition I would advance, which is, that an architect ought not to abandon a convenient arrangement on account of its ugliness, but rather try to get rid of the ugliness without giving up the convenience. If, then, a feeling that his first object is to make his building fully answer its primary purpose, and a determination that nothing shall be allowed to interfere with this object, be referable to a spirit of utilitarianism, I consider that so far, at least, an architect ought to be a utilitarian." This was the end and aim of his (the chairman's) argument. They should not be led by the desire of imitating ancient examples, however beautiful, into neglecting the infinitely more important object of public worship, or diminishing, by the character of the building, the convenience of the worshippers assembled in it. On the point of taste he thought his friend Mr. Scott had been a little uncandid with him. In objecting to Gothic churches in modern squares, he had quoted some instances in the neighbourhood of his own residence. These squares consisted of regular masses of houses, elegant in themselves, but, forming one end of the square, an irregular Gothic church was placed, which had no fitness, and was inharmonious with the lines and masses of the houses, and, in his opinion, inconvenient internally for a large and crowded congregation. Nothing could be more elegant than a Gothic spire in the country, amongst trees and fields, and irregular forms added to picturesque beauty, where it was not necessary to crowd many people into the building; but in London, where it was necessary to accommodate probably 1,500 people in a church, and it was desirable to place them so that all might hear, niceties of technical detail should be forgotten, and utilitarianism and the real object for which the churches were built should be regarded. Mr. Scott had objected to him for suggesting as objects worthy of imitation the examples of the Romanists. This he did because that class of the Roman Catholic clergy who gave great attention to public preaching particularly consulted architectural fitness in their arrangements. As evidence of this, take the great church at Pisa, built by Vasari, or the great churches at Florence: in them was found no heaping together of columns or piers to interfere with the sound or sight. Preaching, in most cases in the Catholic churches, was only incidental, and at Milan and other places he had seen preachers ascend the galleries while large numbers gathered round them, but very few except those immediately near to the preacher could hear him. This was of less importance in Roman Catholic churches, because, as he had already stated, except in the case of the preaching friars, the sermon was considered incidental, and not essential; but in Protestant churches the congregation went as much to hear as to pray and to worship together. The deep and narrow chancels of Mediæval churches were also admirably adapted to the service of the Mass, but not at all to the Communion of the Protestant Church, especially in the crowded parishes of London, where there were sometimes 800 or 900 communicants, who in such a building must be led up a few at a time, rendering a service, already too long for weak and delicate people, painfully longer. His friend Mr. Scott was one of the most able exponents of Mediæval architecture, and had executed many fine examples of it; but he could not help thinking that Sir Christopher Wren, in St. James's Church, Piccadilly, had produced a building internally far more appropriate and useful for a large congregation than Mr. Scott's elegant but inconvenient arrangements. He did not wish to commit any gentleman to these opinions; but they were his own, and he thought an architectural "Tract for the Times" was wanted. They should do their best to restore ancient churches, and protect them from destruction; but a Protestant church in a city, for a large congregation, should be adapted to the wants and conveniences of the worshippers, and the peculiarities of the Protestant services. His object in these remarks was rather to set himself right with the profession than to invite any discussion of the subject, though he should be happy to enter upon such a topic if proper notice of it were given. He would merely add, that Mr. Scott had indulged in a little criticism respecting a Gothic church which he (the chairman) had referred to, and in which, though elegant in itself, he thought the worst evils of the existing system were exaggerated. Mr. Scott availed himself of a misprint as to a date to be eloquent in his criticism; but it must have been clear, from the context, that he (the chairman) was speaking of the time and style of Edward I. and not of Edward III. Such criticism was therefore hardly worthy of the subject. The main point, in his opinion, was that a Protestant church ought to be built in the most convenient form for Protestant worship, and he contended that the Mediæval plans were not adapted to such purposes.

After some conversation as to the discussion of the question hereafter, the chairman urged the members to remember the Institute in their foreign travels, during the recess, and to glean information which might be useful to it, and especially to study foreign churches in relation to the religious of those countries, and their appropriateness to the forms of those religions.

CARVED EBONY CHAIR.

WE are sometimes asked to give representations of ancient or curious furniture, and the annexed engraving may please some who have made that request. It represents a carved ebony chair, from Ceylon, which, at the time our sketch was made, now some time ago, belonged to Mr. Baylis, then of Prior's Bank, Fulham. This house, as many of our readers will remember, contained many rare things, and was the scene of many pleasant doings.

SURVEYOR OF READING.—On the 23rd inst. Mr. W. H. Woodman, of the firm of Poulton and Woodman, of Reading, was appointed surveyor to the corporation of that town.

CARVED EBONY CHAIR, FROM CEYLON.

ON THE DOMESTIC BUILDINGS OF WESTERN FLANDERS IN THE SIXTEENTH CENTURY, ILLUSTRATING THE ORNAMENTAL BRICKWORK OF THAT PERIOD.*

BELGIUM, for the last twenty-five years only an independent kingdom, had previously undergone as many changes as it contains provinces, under Austria, Spain, Holland, and France, and was at the commencement of the present century subdivided under the last named power into departments named from the rivers or other local features. It is now, however, restored to its former Flemish counties, Brabant in the centre, containing the seat of royalty, Brussels, with Antwerp, celebrated for its fine cathedral, East Flanders with its capital, Ghent, the birthplace of our John of Gaunt, and West Flanders with its chief town Bruges.

On the east and south the provinces of Limburg, Liege, Namur, Luxemburg, and Hainault, all more or less mountainous districts, offer in their products of coal, iron, stone, marble, clay, and timber, nearly all the materials required for building.

West Flanders was once the most important province from its long line of sea board, with the ports of Dunkirk, Furnes, Nieuport, Ostend, Sluys, and Damme. The last, now a mere farming village with a population under 900, was once a strongly fortified town containing more than 25,000 inhabitants, who early in the thirteenth century destroyed a fleet of 1,200 ships sent against them by Philippe Auguste, king of France, in the Bay of the Zwyn, which has now been long warped up, the sea having receded nearly six miles. The French shortly after burnt the town, but in 1384, it was so strongly fortified that it resisted for a considerable time an army of 80,000 men, and was forced to capitulate only from the want of fresh water. Its grassy ramparts still indicate the site of massive brick bastions and extensive lines of fortification, while its name denotes that like Ostend, Furnes, and Nieuport, the besieged could inundate the surrounding country so long as they held the dam or flood-gates, and that there was a dam to retain the supply of fresh water which was conveyed to them by the Bruges canal.

The whole surface of the country towards the north is covered with loose, light sand, and clays and marls are only found in the east and south at some depth below it; so that brick, lime, and stone are obtained from a distance by means of the canals with which the country is intersected, although railways now traverse a large district and must soon tend to expedite the traffic. All the western province is low and level, like Holland, and only needs locks to pen up the water to float their inland vessels or canal boats, whilst portions of the dykes may be under repair.

Above the trees lining the canals and roads are seen some few of the plain brick towers of the village churches with their high pitched moss-grown tiled roofs, their apses, and their crosses. On the canal from Bruges to Sluys the first is the fine old thirteenth-century brick tower of the Church of Damme, which is over 150 feet in height. The nave, side aisles, and transepts were destroyed at the close of the last century by the French revolutionists, by whom the churches were either converted into "Temples of Reason," or used as cavalry stables: the bells were coined into money stamped with the cap of liberty, and the fine painted glass was removed from the windows and sold in some instances to London glaziers, who retailed it at their own prices.

The nave of this church did not exceed 80 feet in length, but the choir, now reinstated as the village church, is more than 100 feet in extent from the eastern face of the transept to the spring of the apse of the high altar, and 36 feet wide in the clear: the aisles of 28 feet each, and the clustered pillars of 5 feet each, give more than 100 feet total width. These dimensions, as well as the height, are nearly the same as what remains of the nave of the fine old Priory Church, now used by the Dutch Protestants, in Austin Friars, London.

The windows have moulded bricks externally; but within, the capitals, bases, column-shafts, piers, pillars, string courses, and mouldings, are of a hard blue limestone from Ecaussines, in Hainault, near to Nivelles, in Brabant.

In most parts of Belgium, this hard blue stone (somewhat akin to our blue or black mountain limestone from Skipton, in Craven, West Yorkshire), by the French named "Pierre d'Ecaussines," and by the Belgians, "Orduyn Steen," is used for decorative purposes only, the cost of working almost preventing its common use. A stone, somewhat similar in appearance, but softer, is obtained from the Weald formation near Tournai, in Hainault: it is known as Tournai stone, and is sometimes used for building, but generally for paving. It bears some resemblance to our Kentish rag, but it is rather darker in colour.

The Town-hall, or "Stadt Huys," at Damme, is partly faced with it: the pinnacles, steps, brackets, and other ornaments are of the Ecaussines stone, but the end and back walls are of brick: the vaulting of the basement, once the guard-house, now a stable, has the pillars, arch and groin ribs of stone filled in with brick. This building is now used as an "Estaminet," or tavern. Internally, some of the rooms have plastered walls, but others are bare: all the large floor-beams are of oak, richly carved, and the joists and boards are of the same wood: in one of the rooms is a plastered ceiling of the last century: the walls are generally lined with oak panelling to a considerable height, and some of the arras, or tapestry, remains above it.

Advancing eastward on the canal we see the church towers of Oostkerke, Houcke, Lissweghe, West Capelle, and others, which point out the locality of the several villages; the church of Damme being the type of the whole of the churches, but of more importance.

On the east side of the road to Blankenberg all the churches have towers, while on the west, even to the frontier of France, they have all variously formed spires.

On the right of the Town-hall at Damme is the ornamented brick house belonging to the burgomaster: the farm buildings are on each side: over the entrance door is an ornament carved in white stone (like that of Paris) from beneath the clay of Dieghem and Martélanche.

* Read by Mr. R. D. Chantrell, Fellow, at the Ordinary General Meeting of the Royal Institute of British Architects, June 2nd.

At Iseghem, on the line of railway between Bruges and Courtrai, the church is in course of re-construction entirely with this stone. The rest of this house is built wholly with brick, and the roof is covered with pantiles: the front has piers corbelled out on the lower story which terminate with arches above, and form recesses moulded with a bead and hollow, the former describing the jamb and arch, and the latter the tracery: the tracery forms a second hollow, and the wall within the recesses recovers its face by the projection of the window cills. In the further portion or mass of this house, which contains the entrance door, the piers rise from the base, and the recesses are plain, though the mouldings are the same as in the traceried portion.

The bricks are similar in dimensions to those of this country, but there is a small, compact red brick, called by the natives "Brabant Steen," resembling the old Roman brick in quality, and which, set in Dutch tarras, makes very sound work. In some of the oldest buildings a large brick has been used, of ordinary proportions, but one-third larger: it may be seen in the churches, town-halls, and gates. It is made of unmixed clay and remains very perfect.

On entering the town of Bruges we are reminded of the olden times by its gates, which are closed at nine o'clock every night. The old Ghent gate will convey an idea of those remaining, viz. the Porte Marechale, St. Croix, and d'Ostende; those of Bouvine, St. Catherine and St. Laurent or Damme, having been rebuilt or modernized. The fortifications have long been dismantled, but the broad moat still surrounds the ramparts, and a second moat outside, but not so broad as the first, shows that the town was well calculated for a long and formidable resistance to besiegers. The buildings have an uniform yellow tint, which arises from a regulation of the municipality long in force, and gives a very cleanly aspect to the place, the yellow washing being required annually. In the earlier years of this century contrast was the fashion, and every one compelled to colour the front of his house chose the most opposite colour to his neighbour, as red, pink, blue, green, &c. The yellow colour predominant in the several illustrations will thus be accounted for: whether this originated in the large villages of Gheluwe (yellow), and Ghelu veld (yellow field), I cannot say, but a few years ago, on my way from Courtrai to Ypres, I first noticed in both these places that all the buildings were yellow washed even to the churches.

In Bruges the high roofs terminate in picturesque gables, ornamented with arches and tracery. There are as many of them with plain copings as with steps, though these stepped roofs have always been considered essentially Belgian. The old chimney stacks were ornamented, and invariably covered over to check the eddy or down draft occasioned by the lofty roofs, and though few remain intact, it is found necessary to cover the flues, so that a most curious amalgamation of ridge tiles is seen crowning the chimney stacks in every part of the town. Wood is invariably burnt by the inhabitants upon the hearth, rested upon a piece of iron called a dog, as coal is of comparatively recent introduction by the English residents: the flues are smaller than ours, and are usually cleansed about once a year by an iron ball attached to a rope and a bundle of straw at the other end. Sometimes two dogs or "fire-irons" were placed on the fire-brick hearth for the small bundles of wood or faggots, and were highly ornamented with figures and devices very creditable to the skill of the smiths. The large open fire-places have usually a large slab of Ecaussines stone, moulded, on each side, and a deep mantel which projects considerably, and the chimney breast above it is highly ornamented. Many of those from the town halls of Bruges, Courtrai, Oudenaerde, and other places, are most elaborately carved, and have been made known to us by the accurate drawings of Mr. Louis Haghe. The inside under the lofty mantel is frequently lined with white Dutch tiles, which give a light and cheerful effect. In ordinary houses, the white and blue figured tiles with grotesque ships, windmills, and landscapes, give a far more pleasing aspect than the blackened cast-iron contrivances, which convey the heat up the chimney and radiate but little into the apartment of an English house. Now occasionally the fire-places are closed and stoves placed in front. Our kitchen fire-place is rarely seen in Belgium, the cooking being performed on open "Carrefours," or square furnaces, with charcoal, or rather the wood ashes from the bakers' ovens.

In many of the streets groups of buildings remain unchanged, and the Rue Queue de Vache affords one of the best specimens of street architecture, having decorated houses on each side. The date, 1561, upon one corner building, is formed by iron bolts or bars bolted through to the beams, which rest upon the solid front piers, and act as main ties to the floors, roofs, and walls,—these irons, which are called by the Flemmings "Ankers" (Anchors), may be observed in all the old houses. The large oak beams and joists, having always been exposed, are as sound as when first placed. The beams usually extend from the front to the back wall, crossing the brick partitions: the joists are either laid upon or dovetailed into the beams, flush with the upper side, and the floor boards are pinned or trenailed to them. In the better houses parqueterie is laid over rough boards, but all are kept polished, as carpets are luxuries till recently scarcely known to the Belgians.

The streets are paved with large pebbles or shingle from the sea-shore: they incline from the houses to the middle, where a channel or gutter is formed, and a side footpath is scarcely seen, except of recent date: the water from these middle street channels is conveyed by shoots into the numerous canals, so that after a shower of rain the streets are soon clean and dry.

Sometimes before an entrance door a narrow paving with slabs of Tournai stone (each about a foot square) is found, which, like our Rockhill flag, is slippery when worn and wetted. The floors of the entrance-halls are also paved with small Tournai slabs: the wooden and brick floors are usually sanded.

In the adjoining street, "Rue des Aiguilles," is another picturesque brick building, formerly the town residence of the Counts de Saint Pol Tiennes, now the school for instructing poor girls in lace-making, founded in 1816, by the Abbé Defoere.

In this building there is another feature said to have originated in Bruges,—the staircase turret carried frequently to a considerable height for the purpose of an observatory. Mons. Delepierre, a Belgian Consul in London, a learned antiquary, states that the foreign consuls and merchants had them erected that they might witness the arrival and departure of their ships. The lower part is of brick, and the foliated gallery and crocketted spire of white Dieghem stone. There are varieties of them in the town, for though numerous, no two are alike. The salient angle turret is another peculiar feature of Belgian buildings, both in town and country: some of very remote antiquity are circular on plan, the angular forms being later, both hexagonal, octagonal, and multangular. Sometimes they are corbelled over with plain or moulded bricks, and occasionally they spring from large, richly carved stone brackets.

Nearly opposite to this, in the "Rue des Tonneliers," is another lofty house with arched and traceried recesses, terminated with a square screen or "*masque*," raised only in the centre to take the bolt of the ridge piece of the roof. This, with the lower portion adjoining and the further gabled building, formed one large house, with a court-yard in the centre. The basement and gateway jambs and arch are of Ecaussines stone, the rest of old red brick. The rooms of this and most of the large houses of this time are at least 15 feet in height: they were erected when Bruges was the emporium of commerce, and its prince-merchants were of the class of Shakspeare's Antonio.

They had their East-India Company's House, with its lofty tower, now only hinted at by the adjacent "Tower Bridge," but shown on the old illustrated map by Marcus Gerardus, 1562, in the Town-Hall: the Dukes of Burgundy and of Brabant, and the Counts of Flanders had their palaces of the "Seven Towers" on the Bourg adjoining. The Town-Hall, the Cathedral of St. Donat (the last remains were removed in 1805), and the Church of St. Basile; the Palace "Princen hof," or Court of Princes, and the Mint were near together. The house in the Rue des Tonneliers was once occupied by King Charles II. of England, when in exile. He then patronized the Society of Archers of St. Sebastian, and on his restoration gave them his portrait and some valuable presents, which still decorate their ancient hall.*

A TREATISE ON BUILDING BY CONTRACT.†

In all contracts a spirit of antagonism is bad. When two men fight, the victor generally receives some punishment. In the contemplated contest to which we have referred, you have been regarded as the winner: should you lose, you will be in a far worse position, and will, probably, then, like many others, seek some solace in an indiscriminate abuse of all architects and builders as a set of rascals and swindlers, and people with whom no one should have anything to do; whereas your misfortunes have been your own fault, in having endeavoured to get work done under its value.

Even when a contract is entered into honestly, clauses will have different readings to the opposite interests affected by them. Respectable men, when reading over the specification, generally require explanations of ambiguous stipulations; and, if they are not satisfactory, obtain an alteration of them, or provide accordingly; but it is far different with the unscrupulous, who rather pass such clauses over *sub silentio*, in the hope of getting their version of them adopted afterwards.

Honest contracting, however, is over, or soon will be. What chance has the plain dealing straightforward man with the casuist and the knave? Reputation may do something for him if backed by the recommendation of the architect, but the difference between his tender and the lowest is a stumbling-block involving his fall. It is usually so with an individual employer, and with a board of directors, or committee of works, the course is clear at once. They take the lowest because they are spending other people's money, and are trustees who will have to give an account of themselves. The result is, that highly respectable men will not send in tenders where the competition is thrown open to all, and hence the system of making the price of works a matter of public competition has defeated itself. An employer does not now obtain a cheap job,—he gets a bad one. An advertisement for tenders does not, in the present day, procure for the advertiser a *guarantee* that his proposed works shall be fairly executed without exceeding a certain sum; but it brings to him a number of offers from irresponsible or unknown parties, to undertake them for sums for which he is warned by his architect they cannot be properly done. The disastrous consequences of entering into engagements with such parties have been so often and so severely felt, as to account for the usual clause in advertisements for tenders, to the effect, that "the lowest will not necessarily be accepted." This is like asking for entries for a handicap, of which one of the conditions is, that perhaps the first horse past the winning-post will not be entitled to the stakes, the stewards having the power after the race to determine if his weight was sufficient. As no man would enter his horse subject to so absurd a condition, so it is surprising that men should be found to send in tenders by the invitation of such advertisements; but the avidity with which the inferior tradesmen do so, demonstrates the fact of the advertisers not being true to their own principles, but of their finding an irresistible captivation in the smallest amount. Competitors know very well their most powerful advocate is the employer's purse; and, despite the deprecatory advertisement, they run a ruinous race with one another.

An effort to arrive at the true aim of competition is sometimes made, by inviting a few picked persons to estimate, with the under-

* To be continued. † See page 296, *ante*.

standing that the lowest tender amongst them will be accepted; and as in a race of this sort none other than the considerations quoted in the last paper need apply (at least the parties should be so selected that they alone should apply), this is the least objectionable development of the contracting mania. But even here evils are to be guarded against. In selecting a flock of this kind, beware of a black sheep! It is of the greatest importance that all the parties should be of the highest respectability, otherwise it is not impossible, perhaps not improbable, that mutual accommodations may be given under such arrangements; that is to say, A. B. may agree not to compete with C. D. for a certain work, if C. D. will be equally obliging to him in another; and of course a higher estimate than the one intended to be accepted will be respectively sent in in each case. Such combinations may be extended amongst several contractors; and, for a consideration, all of them except one may send in tenders for greater amounts than the one which it is agreed amongst themselves shall have the job; and where is the employer's remedy? Is it not reasonable to believe, and does not every day's experience in all trading prove, that if purchasers will run down the fair profits of tradesmen, the latter must in self-defence resort to some other source to obtain the means of paying their way? Bearing upon the remark just made, and standing out as one of the worst evils of the system of public competition for low prices in building, is the fact of the gradual deterioration in the character of work generally. Admitting that the pushing propensities of most contractors (who regard speed as the chief if not the only merit in the execution of work) have not entirely destroyed good workmanship, and that there still remain some artificers who take a pride in their handicraft, yet they are not supplied with first-rate materials, because the builders cannot afford to buy them; and this is especially true of timber, which at present prices must not be allowed to lie idle as it ought to do, to become seasoned, but is worked up green. Hence the disgust of many a proprietor who may have had a contract finished under the most agreeable circumstances, on finding in a few years or months his cielings cracked by the shrinking of the joists, his floors showing wide nicks between the boards, his doors twisted and cracked across the panels, and his window-sashes rattling with every breath of wind. Nor can an architect entirely relieve him from this, with all his stringent conditions in his specification. All cannot tell from the appearance of timber if it has been properly seasoned; and generally, if an architect reject work, he is told it is as good as others would have done it, or good enough for the style of building, or even its arrangements or situation; for, strange as it may seem, such pleas are urged, and still more strange, are listened to by the arbitrators before whom the resulting disputes often come. The "best materials and best workmanship"—stipulations in most contracts—no longer carry their English meaning with them, but are tortured into intentions of the best materials and best workmanship, in accordance with the general character of structures of the same class. So that a proprietor cannot by contract build a row of cottages of thoroughly good workmanship, however much such may be his intention, because they will be executed as cottages by contract usually are,—of the lowest style of house-building; though surely, if it ever is desirable that a door should have less ventilation than a gate, or that a window should exclude something more than audible conversation, it is in the poor man's house, where economy in the consumption of coal is of great importance. Hence it follows that contractors have a direct interest in lowering the standard of work, as each badly-executed job justifies them (on their principle) in the similar execution of another.

It was remarked in the early part of this treatise, that the small capitalists amongst builders must live: it is equally true of their wealthier brethren; but to share in any employment with their younger brothers, they also must reduce prices, and consequently their standard of work; and the natural result has been that work is never done so well now as it was twenty or thirty years ago. London, especially the rapidly increasing portion of it, is, for its importance, the worst-built place in the world,—worse than any Irish hamlet of mud habitations. The principle of building on lease is very generally adopted in the metropolis, and as lessor, lessee, and builder, have present rather than future advantage for their object, their three immediate interests may be consulted by the prevailing practice.

If men would have houses to last their lives, built well and satisfactorily, they must return to the old custom of paying for their works according to a valuation of the quantity and quality of materials and workmanship expended therein, or, at least, abandon the driving of hard bargains by the present system of public competition in prices. To a man of upright principle it can be no agreeable reflection that he is getting more than his money's worth out of a contractor; and it is owing possibly to misgivings on this point, that a proprietor will sometimes forsake the side of his architect, and perhaps just at those times when he ought most to stand by him and uphold his authority, —as, for instance, in not enforcing the penalty for non-completion by the specified time. This penalty upon the contractor, or, in more legal phraseology, the employer's claim "as and for liquidated damages" in case of non-completion by the specified date, is very rarely enforced: why it is not more generally insisted upon it is difficult to say. The architect has a direct interest in having the work executed rapidly, as his labour is the sooner performed, and his compensation (by commission) therefore more easily earned; yet employers, either from a false sympathy with the contractors, or from a fear of law expenses, have repeatedly allowed this, their just claim, to go by default, and contractors have availed themselves of this culpable weakness on the part of employers to plead custom to the contrary whenever the claim is seriously urged. Certain it is, that this is about the last claim upon which employers make a stand, although they may be constantly complaining of delay in the progress of the works, and be frequently threatening to put the penalty in force. The result is, that architects cannot expedite work, and contractors laugh at their threats and reminders: in fact, the usual stipulation of this penalty is a dead letter. Where, then, is the advantage of the system of contracts over the old system, in getting work rapidly executed?

To a man of the world it may possibly occur that contractors would not take contracts if they did not get a profit somehow or other out of them, and to the sharp practitioner or "knowing" employer it may, perhaps, suggest itself that his contractor may be more knowing than he is, and, peradventure, be obtaining a great gain out of him without his being able to ascertain its whereabouts, or its extent. Of course, an apparently losing concern to the contractor is here supposed. If, on the other hand, it is a paying one, it is obvious the employer derives no advantage from the modern over the old system of "measure and value," which is, at least, his safeguard against trickery. By the new method he may be obtaining a very cheap, and if so, most likely a very bad article, for the price at which a contract is taken is often quoted (ridiculous as it may appear) in extenuation of its faulty execution,—whilst by the old system he pays for only that which he has, as he would for a peck of potatoes, or a chaldron of coals, by measure, at the market price; and he can have a good or a bad article, just as he may determine. It is also worthy of remark, that if a contractor has made a mistake in his own favour, the employer does not obtain any deduction, because he cannot break the contract, even if he knows of the error; or, assuming that there are some contractors left who have the prudence to put something into their contracts for contingencies, the employer gets no abatement if those contingencies do not arise. Therefore, on either of these suppositions, he may be paying for more than he obtains; whilst an equivalent advantage scarcely accrues to him from the converse of these propositions, inasmuch as in such cases the contractor represents the hardship, and prays for some consideration; and it is not easy to turn a deaf ear, without compunction, to the importunities of a man who declares he is being ruined, when his relief from insolvency would be accomplished by your not insisting upon his obligation, but by paying him for that which he has unintentionally bound himself to supply to you for nothing.

It may be argued that this evil is obviated by the quantities being supplied to the competitors, and that the race is then merely one of prices, in which a man can scarcely make a serious mistake, because, each item being presented to him, he has nothing to do but put the price to it at which he can afford to do it, and money it out accordingly. No doubt this is so; but the practice of architects supplying the quantities of their own works is merely substituting one evil for another, and perhaps not the less for the greater; for, when competitors take out the quantities themselves, the approximation of the several sums of their tenders is not only a check upon the tariff of their prices, but also upon the accuracy of their calculations, and affords, therefore, to some extent, a collateral guarantee of the work being accomplished for about the sum; but when the quantities are supplied by a third party, the utmost care on the part of the competitors will not cancel his fallibility. It has been admitted in one part of this Treatise that architects may make mistakes. Supposing a mistake is made in the quantities by the architect, —if it is to the benefit of the contractor, no one hears anything of it, the contractor holds his peace, and the architect does not know of the injustice; but if the contrary is the case, the contractor's receipts and expenditure soon demonstrate it to him, and he states his grievance to the architect. What is to be done? Is the contractor to lose money by the architect's carelessness? It would be very hard. Is the architect to make the loss good? He ought to do; but he may argue in this way,— "Why should I pay for the building, or any part of it?—why not use less of the particular material in which the error has arisen, or adopt a less expensive one, so that neither the builder nor I need lose,—as I shall be doing my employer no wrong: he will have the value of his money, and I shall save my credit." If such arguments have sufficient weight, the employer gets a worse article than he meant to have. He virtually pays for his work upon the converse principle of measure and value, inasmuch as the quality of the work is regulated by the money to be paid for it, whereas the price ought to be apportioned to the quality.

If the quantities are supplied by indifferent parties, employed, as they sometimes are, jointly by the competitors, the evil is not mitigated, because they err on the safe side in taking the quantities full, as the proprietor is then the only sufferer; and if they take the quantities out on their own risk, they must make enough to insure themselves against the losses they may be compelled sometimes to make good.

There seem to be so many evils in the practice of building by contract, that it is difficult to determine how it can have gained the popularity it has; but probably it is to be ascribed to the laudable desire of knowing what the thing will cost before we buy it. It is, no doubt, satisfactory to know, not only that the proposed works will cost no more than such a sum, but that some one has bound himself to execute them for that sum. Would not the architect's estimate answer this purpose? No! because there is no guarantee of its accuracy beyond the *bonâ-fide* result of a fallible judgment; whereas if the builder make the mistake, the loss is his, and not mine, says the employer, and herein is my guarantee that I spend no more. The real state of the case is, that if the architect has a mistake in his estimate, the building costs the proprietor more money, but not more than it is worth. If the error is with the contractor, the employer does not pay more money, but experience shows there is strong presumptive evidence that he does not get the article he intended to have,—certainly a semblance of it, but not one that looks as well, or that will last as long as he intended it should, or one that has cost *anybody* as much as it ought to have done to realise that intention.

The result of the system of public competition for the execution of buildings or works has been to deteriorate workmanship, to introduce bad

materials, to provoke disputes, to involve litigation, to offer a premium to rascality, to disappoint those embarking in building speculations, and to lower the tone of moral principle in masters and men. The writer respectfully submits these items to the consideration of his readers, believing them to be amongst the most serious social evils of the present day.

GRADUS.

THE ARCHITECTURAL MUSEUM.

To aid in preventing disappointment, we repeat, what is elsewhere advertised, that the annual *conversazione* will be held in the rooms of the Museum, on *Wednesday, July* 16, instead of July 2, as announced in the cards of the summer session.

It was thought that Prince Albert might be led to attend, and Lord de Grey could not have met H.R.H. so early in July as the 2nd. The Prince, however, is unable to be present, but has sent, through the president, 50*l.* as a contribution to the funds of the Museum.

Three large stone figures, which stood in Westminster-Hall prior to the alteration, have, by permission of the First Commissioner of the Board of Works, been transferred to the Museum, as a place of deposit for safety and study, during the pleasure of the Board. The promoters of the Museum are indebted to the kind offices of Sir Charles Barry for these additions; and the occurrence has led to an acknowledgment of the Museum by the Government as a place where works, which might otherwise be destroyed, may with security and utility be deposited. The lectures which have been delivered we shall print in due course.

A HINT FOR A NATIONAL GALLERY OF ENGRAVINGS.

PASSING through the gallery of Egyptian antiquities in the British Museum, at the top of the first flight of stairs leading to the other departments, is a door with a very quiet aspect. On obtaining admission, a passage leads to a spacious apartment, fitted up with glazed cases, surmounted by busts of those great in ancient and modern art. This is the print-room of the British Museum. In the cases which surround us, in handsomely-bound volumes, are collected choice examples of the skill of the Italian engravers, copied from the works of Michelangelo, Raffaelle, and other great masters. Here are also the collected works of Albert Durer, the etchings of Rembrandt, the engraved works of the Flemish school, the engraved works of the British school, Reynolds, Lawrence, Gainsborough, and others. There are here, also, valuable original sketches and drawings by various artists. Many of the engravings, particularly those of the Flemish school, have cost large sums; in some instances, 200*l.* and upwards having been paid for a single print, which, in addition to its artistic value, has been enhanced in price by the scarcity of the impression. Not to enter further into particulars, it cannot be doubted that this room contains the means of conveying a large amount of art education to the multitude. At the present time, the number of persons who visit the print-room is very limited. We have seldom at one time seen more than half-a-dozen students availing themselves of this extensive and valuable collection.

In order to obtain admission to the print-room, it is necessary to have a recommendation from a member of the Royal Academy, or some other person of well-known position.

Some years since it was proposed, we believe, by Mr. Carpenter, the present obliging keeper of the prints, to erect a gallery for their exhibition to the public. This plan was submitted to the late Sir Robert Peel, and much approved of by him; and the long apartment which now contains the Nineveh marbles was originally intended for that purpose.

We have not yet had in this country any sufficiently important exhibition of engravings, but it is easy to imagine how valuable and interesting such a thing would be, and what great good would result from the display of the contents of print-room folios, systematically arranged on the walls of such a gallery as was proposed. We might without any considerable amount of trouble, or risk to engravings, have periodical changes of the exhibition: for instance, a part of the gallery might be devoted to the display of the gems of the various schools by the way of contrast or comparison, and the remainder at times with the Italian works, at others with the Flemish, &c.: our own engravers' labours would have the greatest interest, consisting, as it would, in the designs of Reynolds and the painters of his day, Lawrence, Fuseli, Opie, Barry, Stothart, Blake, Flaxman, and others. The engravings after Turner, Landseer, Wilkie, &c. by the engravers of the present day, would make an exhibition which could not be equalled: and then in wood engraving we are unrivalled. The wood engravers of France and Germany have some admirable qualities; but for breadth of effect, boldness and vigour of execution, and good tone of colour, the English wood engravers far excel. Why should we not have a public exhibition of choice specimens of English engraving on wood?

We throw out these few hints for the second time, hoping that they may revive the idea of a public gallery of prints, such as was formerly proposed, and which, but for the unfortunate death of the late Sir Robert Peel, would most likely before this time have been carried into effect.

COLOURED MATERIALS AS APPLICABLE TO ARCHITECTURE.

AT the meeting of the St. Alban's Architectural Society, held on the 17th inst. as we announced would be the case, Mr. Ayliffe Poole read a paper "On Colour in Architecture," so far as it could be obtained from the use of varied materials. He commenced by saying that it might be assumed as a fact that, in the use of building materials of diverse colours, we were behind other nations, although not behind our ancestors. They did not make much use of colours: they were not practically in possession of so great a variety of coloured materials, and had not that nice appreciation of tone, as distinct from colour, which was necessary to enable them to take advantage of the materials they had. The Normans did not care for harmony of colour; and whatever the materials they used, they brought all to the same hue, by the addition of plaster and whitewash. He considered, too, the use, in later times, of Purbeck marble columns, with white stone, as harsh in effect, and not realising the gradations and tones which nature pointed out in the material she so richly and variously supplied. He showed how almost every locality produced several tints of stone, which also best amalgamated with the landscape features of the neighbourhood; and that on every ground of nearness, cheapness, association and effect, the native material, however rude, should be always employed. He instanced Mr. Christian's new church at Kenilworth, and Mr. Scott's, at Leicester, as modern examples of the use of various coloured stones. The latter church has five distinct colours artistically wrought up in it. It was not from any want of variety in the colours of materials applicable to architectural purposes, that the use of colour had been neglected in England; for we had an ample supply of stone and marble of every hue and shade, from absolute white to perfect black; while in artificial materials, such as bricks, tiles, and terra cotta, any colour desired might be obtained. Glass also offered a wide field for the introduction of colour externally and internally in the roofing of buildings. The conditions on which colour should be applied might be briefly stated. Any good stone usually harmonized with the surrounding scenery; the slate stone of the lake districts being an exception; and *ceteris paribus*, the nearest material was the best; and when neighbouring quarries yielded materials of two or three colours, it was so much the better. In St. John's, at Kenilworth, the red sandstone was used in rubble, with white sandstone dressings, all the materials being found in the neighbourhood; and the effect was extremely beautiful and picturesque. In the combination of tones and colours, the greatest contrasts would not necessarily be the best. In a church, asblar dressings, with black slate walls, would offer too strong a contrast unless well managed. Light might harmonize with light materials, and warm with warm might bear to be repeated, but no dark with dark, or cold with cold. Marble was strangely neglected in England, and its more frequent introduction was desirable. Coloured materials might properly be introduced in such buildings as market-houses and town-halls. Mr. Poole advocated the use of brick as giving every colour that the architect could desire; and concluded with a practical suggestion that each architectural society should exhibit specimens, in uniform cubes, of the stones and marbles belonging to its own locality; while the Architectural Museum in London might collect specimens from every district, with the price, rate of carriage, and facility of working attached to each example.

THE CRYSTAL PALACE WATERWORKS, SYDENHAM.

IN conjunction with the plan in our last number, the accompanying view of the grounds, fountains, cascades, and part of the building, will serve, we hope, to convey to our readers away from London, a tolerably correct notion of the extraordinary work now completed at Sydenham. One of the water-towers is seen on the left of the building. In a mechanical point of view, this is unquestionably the most extraordinary system of waterworks the world has ever seen, and art may hereafter be brought to bear upon it, so as in other respects to render it super-eminent. Sir Joseph Paxton will doubtless show the directors one of these days, when money is at command, what the art of the sculptor could be made to do for these waterworks.

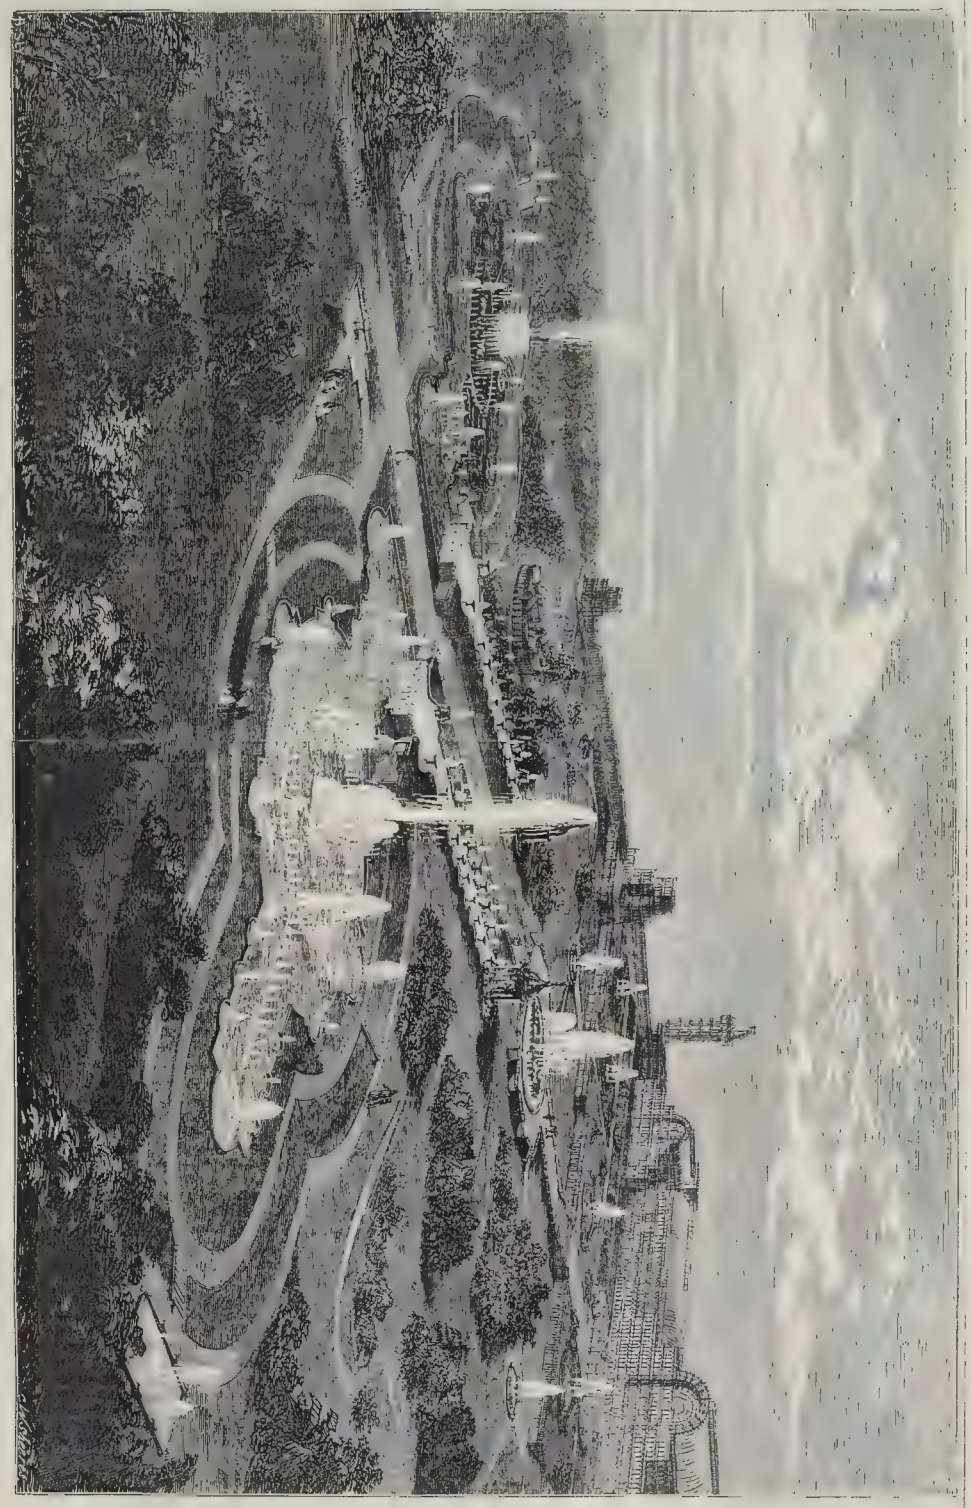
The flower-show on the 25th was very successful; much greater cleverness was shown in the arrangement of the groups of flowers than had before been attempted. The right spirit is apparently being awakened at the Crystal Palace.

THE MANCHESTER EXHIBITION BUILDING.

IT is stated that the committee have adopted the design of Mr. Edward Salomons, of Manchester; to be carried out by Messrs. C. D. Young and Co. iron-founders, the firm with whom they were in treaty before they invited designs in competition; and that the amount of contract is 25,000*l.* The impression given by this first step in the affair is decidedly bad: perhaps Mr. Fairbairn, or Mr. John Deane, the manager (it is of no use appealing to a body) may think it worth while to give some explanation of it. Messrs. Young are the perpetrators of the abominations with which the land of the '51 Exhibition Commissioners is now disfigured,—"the Brompton Boilers," as these precious constructions are called.

SECOND LIST OF WORKS CHOSEN BY PRIZEHOLDERS IN THE ART-UNION OF LONDON.

From the Royal Academy.—Grandmama Caught, A. S. Lumley, 70*l.*; The Deer Park, H. Jutsum, 40*l.*; An English Village, R. P. Noble, 26*l.* 5*s.*; A Group in the Marshes, W. Weekes, 25*l.*; Laura, J. W. B. Marshall, 25*l.*; Bristol Market Woman, C. Richards, 35*l.*; A Weary Journey, C. Dukes, 25*l.*; Trellis Vine—Lugano, W. W. Fenn, 20*l.*



From the Royal Scottish Academy.—Llangharne Castle, Perigal, 35*l.*

From the National Institution.—Shades of Autumn, A. W. Williams, 150*l.*; Swaledale, J. Peel, 50*l.*; Thames Tow Barge, W. S. Rose, 35*l.*; Bacharach, J. Bell, 30*l.*; Dutch Vessels beating out, E. Hayes, 20*l.*; Domestic Poultry, H. B. Gray, 30*l.*; Gipsies in a Wood, J. E. Meadows, 35*l.*

From the Society of British Artists.—Streatley Mill, Boddington, 125*l.*; View in Dovedale, J. C. Ward, 80*l.*; Fruit, N. E. D. Stuart, 50*l.*; Goat Fell, G. Cole, 38*l.*; Gleaners Resting, W. Shayer, 40*l.*; View near Barmouth, A. Clint, 25*l.*; A Yorkshire Farmhouse Kitchen, E. Cockburn, 21*l.*; Afternoon, A. J. Starh, 25*l.*; Loch Lomond, P. C. Auld, 30*l.*; The Mumbles, Swansea, G. Wolf, 25*l.*; Summer Shade, E. G. Warren, 25*l.*

From the Water-Colour Society.—Hotel de Ville, Brussels, W. Callow, 73*l.* 10*s.*; Oyster Dredging, E. Duncan, 105*l.*; Somersetshire-lane, G. Fripp, 47*l.* 5*s.*; The Homestead, C. Davidson, 40*l.*; Fête Champêtre, G. Dodgson, 60*l.*; Coast of Boulogne, J. J. Jenkins, 26*l.* 5*s.*; All Saints' Church, Hastings, C. Davidson, 25*l.*; Distant View of Edinburgh, J. Callow, 21*l.*; A Beech Grove, F. O. Finch, 20*l.*; Old Gateway, Guernsey, J. P. Naftel, 25*l.*

HAM, NEAR RICHMOND, SURREY.—On Wednesday, July 2nd, H. R. H. the Duke of Cambridge will lay the first stone of the new building for the National (late Cholera) Orphan Home, founded in 1849. The architect is Mr. Edward C. S. Blake.

CRYSTAL PALACE, SYDENHAM: GENERAL VIEW OF THE FOUNTAINS AND GROUNDS.—[DESIGNED BY SIR JOSEPH PAXTON, M.P.

CHURCH-BUILDING NEWS.

Peterborough.—Land for a cemetery, upwards of five acres in extent, is to be forthwith purchased of the Ecclesiastical Commissioners for 800*l.* and enclosed by a sunk wall or haw-haw fence.

Gresham (Norfolk).—Gresham Church, which has been for many years in a dilapidated state, is about to undergo a thorough restoration, through the liberality of the Rev. J. Spurgin, the rector, assisted by the parish. A new open timber roof will be provided, and the church re-seated, the greater part with free open benches. Mr. Spurgin is also erecting a school-house, with master's residence. The whole of the works are being done under the direction of Mr. J. J. Darkin, of Holt, architect.

Thatcham.—Plans have been prepared for repairing and altering the parish church, by Mr. Thomas Hellyer, of Ryde, architect. The estimated cost is 1,311*l.* odds. The principal works are the building of a new south aisle and works connected therewith in the old walls, 440*l.* 2s. 6d.; re-seating throughout, 377*l.* 12s. 8d.; and restoring the Fuller Chapel, 217*l.* It is thought desirable that at least 1,500*l.* should be raised before the restoration is commenced.

Sherborne.—Mr. George Digby Wingfield has announced his intention of completing the restoration of the abbey church of St. Mary, Sherborne, as a memorial to his uncle, the late Earl Digby. The plans and estimates for restoring the entire fabric were prepared by the late Mr. R. C. Carpenter, but were only carried out in the nave, aisles, and transepts. The cost has hitherto been 14,000*l.* The choir, aisles, and Lady Chapel remain to be done. The work has been intrusted to Mr. Slater, as Mr. Carpenter's successor. It is stated that the completion of the work will occupy three years, and cost 10,000*l.* to 12,000*l.* It is said to be Mr. Wingfield's wish that Sherborne tradesmen should be employed on the work.

Bristol.—On 16th inst. the foundation-stone of an intended new chapel for the use of the Moravian congregation at Kingswood-hill, from a design by Messrs. Foster and Wood, of this city, was laid by Mr. Charles Hindley, M.P.

Llandarrog.—The new church of Llandarrog was opened on Friday in week before last, by the Bishop of St. David's.

Cwm-Avon.—All Saints' Church, erected by the partners of the Cwm-Avon Works Company, at a cost of about 4,000*l.* was consecrated on 10th inst. It is in the Early English style, from designs furnished by Messrs. Prichard and Seddon, of Cardiff, and consists of nave with west porch, north and south aisles with porches, central tower with organ chapel on one side and vestry and heating-room opposite, and sacrarium to the east. The nave, which is 60 feet high to the top of the cross, has arcades of four bays of wide span, with moulded arches of freestone, with labels resting on carved corbels, and clerestory with four triplets of lancet windows on each side, the internal arches of which are supported by polished serpentine detached columns with carved capitals. Above the western porch is a four-light window, the head being pierced with trefoils and an octofoiled circle with carved cusps, forming an annulet of foliage, the spandrils between being carved, and the arch mouldings supported by columns, which on the inside are of serpentine. The roof of the nave is of Memel, each pair of rafters being treated as a principal, and having crossed braces. The tower is over the western portion of the chancel, with a moulded chancel arch having double polished serpentine columns to either jamb, with carved capitals and large figures of angels supporting the label. The vestry and heating-chamber are covered by stone lean-to roofs against the tower, formed by laminated courses of freestone resting upon deeply moulded ribs. The sacrarium, to the east of the tower, has also a stone compass roof of the same character. The tower is lighted on either side by a large wheel traceried window, and the sacrarium by a triplet of lancets, the central one being nearly 30 feet high: their internal arches are supported by slender detached polished serpentine shafts from Cornwall. The tower batters or diminishes slightly, to prepare for the broach spire, which is not entirely completed, but will be 100 feet high, and with the tower 180 feet from the ground: the masonry of the spire has been arranged so as to avoid monotony. The materials for the walls are Pennant stone in bands of irregular rangework, alternately with river pebbles in random-work, with quoins and dressings of Combe Down Bath stone: all the carved work is executed in Caen stone, as also are the pulpit and font, excepting their shafts, which are of polished serpentine. The roofs are of Memel, covered with boarding, felt, and Bangor slates. The doors are of oak, fitted with grilles, for ventilation, and plate-glass slides to cover them at pleasure. The seats and other furniture are of pitch pine varnished. The floors are laid with Minton's tiles, those in the sacrarium being of rich encaustic pattern. The glazing is of green cathedral glass, with white border next the stonework. The church will be heated by a hot-water apparatus, and lighted by one gas corona, gilt and coloured, and having three tiers of lights. The cost of the whole building complete will be within 4,400*l.* The works have been carried out by Messrs. James and Price, of Cardiff, builders; the carving by Mr. Clarke, of Llandaff; and the ironwork, by Mr. Skidmore, of Coventry.——The new Baptist Chapel, at Cwm-Avon, has been opened for divine service. It is 64 feet by 40, with a gallery all round. The contractors were Messrs. James and Price, under the superintendence of Mr. Stephens, of Cwm-Avon, architect.

Mold.—The church here has been restored and re-opened. The alterations and additions were commenced about two years ago, and consist principally of the addition of a chancel, the re-modelling of the seats, and the removal of the organ from the west to the east end of the church. Mr. Scott was the architect employed. By the plan adopted 300 additional seats were obtained. The chancel is at the east end of the church, and is of an octagonal form, supported by four buttresses, and built of freestone. The greater portion of the stone-work was executed by Messrs. Powell, of Mold, stone-cutters. The pinnacles and exterior carving were executed by Mr. J. Plinstone. The wood-work for the chancel, nave, and centre aisle, was contracted for by Mr. Robert Edwards, of Mold, joiner, and the pews by Mr. Broadbent, of Leicester. The chancel windows are of stained glass, furnished by Mr. Wailes, of Newcastle, and exhibit representations of the Saviour, from his birth to his ascension. It appears that the subscriptions were not sufficient to cover the whole expense incurred, there being now unliquidated a sum of 411*l.* 18s. 3d. The whole outlay amounted to upwards of 5,000*l.*

Wolverhampton.—About 2,000*l.* are still required for the restorations (by Mr. Christian) of the Collegiate Church of this town, and a public meeting was to be held on Tuesday, on the subject.

Heywood (Manchester). — The consecration and opening of Heywood Cemetery, took place on Saturday before last. The cemetery is situate at Chamber House, about a mile from Heywood. The area is ten acres, and five held in reserve.

Bradford.—The foundation-stone of a second chapel for the Baptists of this town was laid last week. The site is in Little Horton-lane. The chapel will be much like the one in Westgate, and will therefore have few architectural attractions. The length within the walls will be 75½ feet, width 50½ feet, and height 34 feet. It will be lighted by five windows on each side, and several smaller windows at the end. There is a vestry 22 feet by 17 feet, and another room 32 feet by 18 feet; and over these is a school-room 49½ feet by 28½ feet, which can, by the removal of a sliding partition, be placed in communication with the chapel. The ground-floor of the chapel will afford accommodation for 627 adults, and the end gallery for 282 children,—all being free. When side galleries are erected, accommodation will be afforded for 1,295 persons. The school-room will accommodate about 400 children. The estimated cost of the building, inclusive of a fence wall, but exclusive of the site, is 2,750*l.* Messrs. Andrews and Delaunay are the architects, and the various contracts have been let as follows,—masons, Messrs. Barker, Farnish, and Bell; plasterer, Mr. George Raistrick; joiner, Mr. Archibald Neill; slaters, Messrs. Joseph Thompson and Son; plumber and glazier, Mr. J. Keighley; painters, Messrs. Harland, Bros.

Darlington.—From a report by the local Burial Board, it appears that the Bishop of Durham refused to sanction a modified plan for the new cemetery, with the chapels 36 feet apart, stating that as the parties appeared so urgent he would not object to 40 feet; but less than that he could not feel it his duty to allow, although it seems that the bishops of Ely and Lincoln have sanctioned chapels from the same plan unaltered, while the Archbishop of York does not require the chapels to be separated at all. The architect, according to the report, stated to the Board that he could still alter the plan, so as to give 40 feet between the chapels, at a cost not exceeding 60*l.* on the original number and plan. The Board, however, declined to proceed further without consulting the ratepayers, but agreed to call a meeting for approval of the new design altered to meet the bishop's request. After much discussion at this meeting, a resolution was carried in favour of the amended number and plan proposed by the architect, by which the chapels will be 40 feet apart, as required by the bishop.

Carlisle.—The consecration of Hilton and Murton chapel took place on Tuesday in last week. The building cost 596*l.* odd, and the subscriptions fell short about 100 guineas. The accounts for the erection, however, were all discharged by the vicar. The chapel stands on the road leading between the two villages, and close to Thwaite School. The architect was Mr. George Robinson, of Appleby. The style of architecture is the Early English of thirteenth century. The interior is plain. The seats (for 170) are all open. The woodwork is stained dark oak.

Dalston.—A monument has been erected in Dalston churchyard over the vault in which the remains of the late Bishop of Carlisle are interred. It is a Norman cross of twelfth century, and is about 8 feet in height. It is executed in Caen stone, after a design by Mr. Austen, of Canterbury, who superintended the work. At the four extremities of the cross are the emblems of the Evangelists, and in the centre is the inscription. There are other allegorical chisellings besides the emblems referred to.

PROVINCIAL NEWS.

Peterborough.—The construction of a more commodious cattle-market is proposed to be effected by pulling down a number of old buildings in Priest-gate.

Boston.—The new Athenæum in the market-place here was opened on Tuesday in last week, with a "*déjeuner*" in the Assembly-rooms, and an evening "*soirée*" in the new Corn Exchange. The reading-room is on the first-floor, over a shop, which occupies the ground-story, along with a carriage-way to the Exchange and Athenæum. Behind the reading-room is the library. In the upper-story are two class-rooms, one of the size of the library and reading-room, both of which are of considerable dimensions. The work was executed by Mr. W. Webster, of Wyberton, from the designs of Messrs. Bellamy and Hardy, of Lincoln. Mr. J. Saville was clerk of the works.

Kettering.—Plans of the Grammar School-house and school-rooms, as proposed to be reconstructed, have been exhibited at the banks of the town for inspection. The style is Elizabethan. The subscription-list is in progress, but a further sum of 400*l.* at least is required, if not 900*l.* to clear all without mortgage.

Rochester.—The works connected with the new bridge are about completed. A public promenade, to extend along the Medway, from the new bridge to the Baths, has been under consideration by the wardens, and a plan adopted for carrying out the undertaking. A model is to be placed in the Corn Exchange, Rochester, for exhibition. It is expected that after the taking down of the present bridge, the flow of water up the river will be greatly increased, to the serious damage of surrounding property,

unless the river-bank landowners take steps to prevent their lands from being inundated. The ceremony of opening the new bridge will take place about the first week in July.

Great Bedwyn (*Wilts*).—The chief stone of the Infant Schools now in progress of erection in this town was laid on Monday before last. After the principal part of the ceremonial was gone through, a somewhat new feature in "stone-laying" was exhibited. "Several other stones were then laid by Mrs. Hodgson, Mrs. Pike, Miss Martin, Miss Radford, Miss L. Potter, Miss Talbot, Mr. Jones, &c." The buildings (a gift from the Marquis of Ailesbury) are intended to comprise a school-room, wash-house, outbuildings, &c. the school to be capable of accommodating eighty children under six years of age. The architect is Mr. J. Overton; the builder, Mr. J. Lloyd.

Bath.—The tenders for the erection of the Lansdown Proprietary College were opened on Tuesday in last week, and that of Mr. Steeler was accepted. The site has been extended from six to eight acres.

Holyhead.—On Friday in week before last 120 feet of the staging at the Holyhead harbour works gave way. Two men were killed The loss is estimated at between 2,000*l.* and 3,000*l.*

Birkenhead.—The foundation stone of day and Sunday schools in connection with St. Werburg's Roman Catholic church, Birkenhead, was laid on Monday in last week, on a site in Price-street. The buildings are to be of decorative Gothic architecture, and comprise a boys' school, 50 feet by 32 feet; girls' school, 40 feet by 32 feet; infants' school, 24 feet by 17 feet, and three class-rooms, with residence for teacher. Mr. E. W. Pugin is the architect, Mr. S. R. Eyre, the surveyor, and Mr. James Routledge, the builder. The total cost will be about 4,000*l.*

Liverpool.—Some building and other ground and villas near Liverpool, were sold by auction last week at the Clarendon-rooms. The property is situate in the hamlet of Thingwall, near Roby. The first lot comprised about ten acres of arable and meadow land, with a residence known as "Ashfield House," and various outbuildings. The lot, says the *Journal*, was ultimately sold for 2,560*l.* The next lot, about 8,829 square yards of land, was bought by the purchaser of the first lot, at 16d. per square yard. Lot 3.—About 2,000 square yards of land, with two semi-detached villas erected thereon, sold for 700*l.* Lots 4 and 5, each consisting of 2,040 square yards of land, fetched 13d. per square yard. Lot 6.—3,700 square yards of land, sold for 1s. per square yard. The remaining two lots were 2,300 and 2,080 square yards of land: the first sold for 1s. and the last for 11d. per square yard.

Manchester.—The circular end of the Manchester Exchange, which has been rebuilt to correspond with the larger portion of the building, from designs by Mr. Mills, the architect, has now been completed and opened to the subscribers. The floor, says the *Courier*, is the largest of any public building in this country, or, in fact, in Europe, exceeding very considerably the space afforded by the late Tree-trade Hall. In addition to this, as we have before noted, there is a light gallery over the new end, set apart for the newspaper-stands and tables, leaving nearly the whole of the immense floor below for business purposes.

Stockport.—On Wednesday week a public meeting was held at Stockport, at which, among others, the following resolution was passed;—"That as public baths are essential to the health and comfort of the inhabitants of this borough, the corporation be requested to take the necessary steps for the erection of such baths."

Carlisle.—It has been resolved to erect a statue, on a site in the market-place, in honour of the late Mr. James Steel, a local celebrity. A monumental fountain, surmounted by a clock-tower, was first resolved on, but the sum in hand, it was found, would just provide a marble statue, which therefore is to be cut by Mr. W. F. Woodington, sculptor, from a design already prepared.

Jarrow.—The works in connection with the Jarrow Docks are being proceeded with rapidly by the contractors, Messrs. Jackson, Bean, and Gow. At present 174 acres of the Slake are enclosed, and the workmen have commenced to excavate for the dock bottom, which will be from 18 to 20 feet below the present surface. Five bridges, of mason work, four 80 feet in length, and one 30 feet, will cross the road at a distance from each other of about 150 feet. One is now completed by Mr. Heaps, who has contracted for this part of the work. About 150 yards of the permanent timber quay-walls are constructed. The piles, of 50 feet in length, are driven by a Nasmyth hammer, which gives seventy-five strokes in a minute: this work is under the superintendence of Mr. Scott. The diversion of the river Don is nearly completed. The number of men employed at present is from 800 to 1,000, but in a short time double that number will be at work.

Kelso.—The new corn exchange, in Kelso, was formally opened on Monday before last. The building, the foundation of which was laid last July, is situated in Wood-market, and has been erected at a cost of about 4,000*l.* Mr. David Cousin, of Edinburgh, was the architect, and Messrs. Oliver and Bulman were the joint contractors. The large hall is 103 feet by about 52 feet, having a height of 35 feet from floor to ceiling, and is calculated to hold 1,400 persons. There are thirty stalls on either side of this hall for the use of farmers, as well as five at one end and seven at the other for grain merchants, seedsmen, &c. Those not possessing stalls have the use of a hall 39 feet by 15 feet, placed over the vestibule. The principal hall is lighted from the roof, which is divided by five rafters into six compartments. There is a small gallery at one end. The building, however, according to the local *Chronicle*, is ill-constructed for hearing, otherwise it might have been an important addition to the accommodation for public meetings, &c. in the town.

Spey.—Mr. Errington, C.E. of the firm of Lock and Errington, in his evidence before the Commons' committee on the Inverness and Aberdeen Junction Railway Bill, said the company intended to throw a tubular bridge across the river Spey, similar to, though smaller than, the one which spans the Menai Straits. The bridge across the straits is about 500 feet: that over the Spey will be 230 feet in length.

THE INUNDATIONS IN FRANCE.

THE total damage done by the inundations in France, is estimated at 8,000,000*l.* sterling! It seems extraordinary that in a country where the science of engineering is studied as it is in France, a repetition of such disasters should be permitted. Whenever we hear of inundations from the overflow of rivers, the question occurs, what sort of bridges are there? The bridges on the Loire are constantly either tumbling down under floods, or holding the water back to flood the country. The Rhone has the old middle age, or older than that, bridges to bridle it, and make it kick!

Mr. Hosking, in the preliminary essay to his "Treatise on the Practice and Architecture of Bridges,"* published in 1842, wrote:—

"It must be supposed, in any case, that the piers of a bridge have been adapted to the section of the river, so as not to impede the current in any greater degree than it may be liable to be impeded by existing natural causes. While the water meets with no obstruction greater than that which the piers offer, no appreciable head should be formed, nor should any severe action take place on the bottom of the river; but if the springings of the arches be once immersed, the haunches and spandrils add, inch by inch, and foot by foot, to the line of obstruction as water attains a head, which it does with constantly increasing effect; the bed of the river is acted upon, and the piers are undermined to the utter destruction of the whole edifice; or, if the piers be so founded and formed as to withstand this action, and the bridge is not overturned bodily, it forms a perforated dam, and is productive of more mischief than would be occasioned by its fall, by holding the water up to flood the surrounding country and thus to mingle the inhabitants and their habitations in one common ruin."

In the Practical Treatise,—

"It seems quite evident in this case [Smeaton's bridge over the Tyne, at Hexham, which had been thrown down by a flood in the river] that the bridge was the cause of its own overthrow, and it is very likely that the yielding of the bed of the river prevented the greater calamity which must have followed if this had not happened; the waters must have risen until the banks above should give way or be overflowed, when the whole country would have been deluged to the probable destruction of life and property beyond calculation."

And then,—

"The bridges, and ruins of bridges, which remain to the present day, of Roman construction, exhibit for the most part great massiveness in the piers, as these are in some cases equal in thickness to one-half the spaces between them, in some to one-third, and in few instances do the piers bear less than the latter proportion to the openings. The bridges of the Middle Ages, such as those over the Elbe at Dresden, and over the Rhone at and below Lyons, have piers, or masses of substruction to the piers, occupying almost, if not quite, as large a proportion of the bed of the river as they leave to the water; and to these and such-like nuisances, inundations—of which the fearful inundation at Lyons in the winter of 1839-40 is an instance—may be certainly traced, whilst the bad drainage of the lands bordering upon rivers vexed with bad bridges is a constant source of evil to the countries which possess them."*

And now again, in 1856, the same deplorable disaster has recurred.

* Weale, London.

POLYCHROMATIC GLASS.

IN your last number you alluded to a new description of glass, called "polychromatic glass," describing it as a new invention. The principle, however, on which the effects produced by this glass depend is not a new one, as I have known and used it for some time past, and am now having a large church window made by Mills, glass-stainer, of Great Quebec-street, in the border and tracery of which it is being carried out. A description of it also appeared in your last volume (p. 514), in a communication headed, "New Effect in Windows."

Mr. Burridge's invention is an improvement (and a great and important one) upon the process there described, and consists in substituting for the two pieces of flashed glass—say for example, one blue, the other ruby—one piece of glass, having a blue stain on one side, and ruby on the other. The effects produced are precisely the same, but the use of double glass is obviated. I can testify to the rich and brilliant effects which can be produced, at a small cost, by this new process of decoration; and hope that Mr. Burridge's ingenuity in providing a material suited to its development will be appreciated.

It is quite likely that he may never have seen my former communication to you, but if he did, his present invention is a result of the valuable publicity effected by your columns, and an encouragement to your readers to communicate the result of their observation.

I have tried in vain to induce one or two in the glass trade to take up the matter, and began to fear that the use of this glass would be confined to my own practice, but I heartily rejoice to know, that it is in a fair way of being publicly appreciated. E. E.

OUR PUBLIC THOROUGHFARES.

Confusion of streets is inevitable where a city is built without a plan. Some seem to lead in the direction you want to take, which bring you back again, as in a maze, to the point whence you started. The Seven Dials may be cited in this wise as a good example of a bad plan.

Again, there is a public nuisance that ought not to be tolerated—*the foreclosure of streets and squares.* Some are called squares which are in reality only causeways, with narrow preserves, railed in and long drawn out, marginal or central: they are more properly *cul-de-sacs*, or turnagains, which, tending towards the cardinal point of your journey, only lure you on to the reduplication of toil. Such is Queen's-square, an attenuated oasis of lawyers. This, however, is not walled off, nor built up at the end; for a railing shows the trees and the verdure beyond it, and admits the air (in such quality as it there abounds). The Duke of Bedford's estate has its bars, and they annoy occasionally; but they are *opened at call*, and attended by porters, stationed only to preserve the right of excluding wains and nuisances from a private quarter. Belgravia, too, is protected in a similar way.

Other parts of the metropolis discover a mode of

* We may take the opportunity of mentioning that Mr Hosking, who, as our readers know, ceased to hold office as official referee when the present Metropolitan Building Act came into operation, is now laying himself out to act as arbitrator or referee upon questions of the kind and character to which his experience applies, and also as consulting architect.

laying out and a spirit of exclusiveness very much at variance with the foregoing. In Brompton, a quarter covering some square miles, the access to the Park is cut off from Albert-gate to Thurloe-square. This formerly favoured and pretty suburb did enjoy at least a view of the Park at the end of Brompton-square, where an opening of 45 feet had been reserved for a thoroughfare. This opening was obtained by the builder of some houses above it, and has been closed in by a house which towers two stories over the old and respectably-finished ranges; blocking out all view and access, together with much of the light and air!

The health, the convenience, and the enjoyment of the greater numbers, should be consulted in all such cases; and in great municipalities they ought to be protected. If there be a private right in conflict with the public weal, that right should be satisfied, while the public health is saved.

Curzon-street is an old instance of accidental exclusion from free circulation: the impediment in that case stood on the private rights of the Duke of Devonshire and the Marquis of Lansdown: their gardens intervened to shut out Berkeley-square and Bond-street (at that time the great centres of attraction). These noblemen surrendered a footway, and built walls, the whole traverse length of their gardens, and dedicated to the public a path, which is closed but one day in the year. Could not the lord of the soil, at Princes-gate, so preserve his royalty?

COMPETITIONS.

New Presbyterian Church, De Beauvoir-town.—The design of Mr. Knightley, of Cannon-street, has been adopted for the New Presbyterian Church, De Beauvoir-town. The first premium has been awarded to Mr. Wm. Lee, and the second to Mr. Robert Lamb, of South Shields. The competition was a limited one, five architects having been invited to submit designs.

PROCEEDINGS UNDER METROPOLITAN BUILDING ACT.

NOTICE TO DISTRICT SURVEYORS.

At the Mansion-house last week, Mr. Joseph Sherwin, of 62, Tabernacle-walk, City-road, stove manufacturer, appeared upon summons, charged under the Metropolitan Buildings Act (1855), with having, on the 9th February last, he being then a builder, set a cooking apparatus upon a floor in the house No. 4, Pope's Head-alley, Cornhill, without giving notice to the district surveyor, by which he had incurred a penalty of 20*l.*

Mr. John Young, surveyor to the eastern district of the City of London, in which Pope's Head-alley is comprised, said that, in the month of February last, certain alterations had been made in the premises No. 4, Pope's Head-alley, Cornhill, which included the fixing of a cooking apparatus on the first-floor, and that this apparatus had been fixed by the defendant, without notice being previously given to him, as was required by the 38th section of the Act. Shortly afterwards a fire broke out on the premises, in consequence of the fixing of the stove, and the fact having been reported to the architect of the Metropolitan Board of Works, that gentleman had called his attention to it, and directed him to take the present proceedings.

In reply to the Lord Mayor and Mr. Alderman Cubitt, prosecutor gave it as his opinion that the fixing of a stove was a "work" under the Act, for which notice was to be given.

Mr. W. Jones, who attended for defendant, contended, firstly, that the fixing of a stove was not a work for which notice was necessary; and, secondly, that notice had been actually given.

The prosecutor, upon cross-examination, admitted that he had received notice of an intention to make a new chimney-shaft, and that he inspected it, but without knowing that there was any intention of fixing any cooking apparatus in connection with it. And besides, at the time of his inspection he supposed that all the works contemplated when notice was given to him had been completed; and as the notice had been given to him by Mr. Carter, a builder, and the apparatus had been fixed by defendant, he contended that there had been a change of builders, which rendered it compulsory upon defendant to give a fresh notice.

Mr. Jones, in reply, urged that it was absurd to call his client, who was a blacksmith, a builder; that the penalties of the Act applied to builders alone; that the chimney-shaft, for the erection of which due notice had been given, was constructed for the apparatus subsequently fixed, and that, consequently, one notice was sufficient for all the purposes of the Act.

Mr. Alderman Cubitt was of opinion that one notice ought to have been considered quite sufficient by the surveyor; and further, that the fixing of a stove was not a "work," however carefully it required to be done, within the meaning of the Act. The summons, therefore, must be dismissed.

The opinion thus expressed will, we fear, lead to error and difficulty. The Act points out distinctly certain requirements to be attended to in fixing stoves used for the purpose of trade or manufacture; and as the district surveyor must see that the directions of the Act are properly carried out, notice must be given to him.

A RAILWAY COMPENSATION CASE.

In the year 1846 the South-Eastern Railway Company obtained their Act of Parliament for making the North Kent line, and in February, 1847, they gave notice to Mr. Thomas Lintott, the owner of two houses and gardens, with a cottage adjoining, and a piece of orchard ground, in the parish of Swanscombe, that they required thirty-two perches of his land, for the purpose of the railway.

Mr. Lintott claimed 1,060*l.* for the land, and consequential damage to his estate.

The company objected to the amount, but were allowed to take possession of the land they required, upon depositing 400*l.* in a bank at Gravesend, in the joint names of the claimant and the chairman of the company.

The question remained in litigation until the spring of 1855, when it was agreed to submit it to the arbitration of two surveyors, or an umpire, in the usual way.

Before the surveyors could meet the claimant died.

It was eventually arranged with the executors to refer the whole question to Mr. Wallen (of the firm of Humphreys and Wallen), as sole arbitrator.

The inquiry occupied two days.

Mr. Edward Topping, surveyor, and Mr. Debenham, auctioneer, with other witnesses, for the claimant, were examined; and Mr. Charles Lee and Mr. Edward Ryde, surveyors, and Mr. Marsh, auctioneer, for the company.

The arbitrator has awarded 284*l.*; the claimant to pay all his own expenses incident upon the arbitration, and half the arbitrator's charges.

Notices of Books.

The Scenery of Greece and its Islands. Illustrated by fifty views. By WILLIAM LINTON. 7, Lodge-place, St. John's-wood. 1856.

The influence which Greece—so small, so great—has exercised upon the world is very wonderful to contemplate, and should be instructive to governments. As Dr. Wordsworth truly says,—"The works of the architect and of the sculptor, in every quarter of the globe, speak of Attica: of Attica, the temples, and palaces, and council-rooms of capital cities, give sensible witness, and will do for ever. The genius of the Athenians made their speech universal: the treasures which they deposited in it rendered its acquisition essential to all: and thus the sway, unlimited in extent and invincible in power, which was wielded over the universe by the arms of Rome, was exercised over Rome itself by the arts of Athens." Every prominent point in Greece brings a story to the memory: every ruin there has an interest in the eyes of the world. Mr. Linton, in his charming volume, brings the present aspect of this marvellous country vividly before us, and, in addition to his fifty views, many of which are pictures in little, gives some admirable letterpress—graphic, learned, and suggestive. We take a paragraph from his chapter on "Statue and Temple Painting," wherein he shows, what cannot now be denied, that the Greeks applied colours to statues and buildings, but maintains that sculpture cannot combine with painting, without sacrificing its high character:—

"The writer," he says in conclusion, "has already ventured to record his opinion as an artist respecting the impropriety of applying colours to works of sculptural art. Architecture not being an imitative art, is not necessarily confined by such stringent laws; indeed, a building may be so designed as to admit of the richest ornamentation that colour and gilding can bestow, as in Gothic edifices: but the simple dignity of Greek buildings would appear to be more or less vitiated by the introduction of such attractions, especially when they are employed to excess. Finery and fine art do not harmonize. In addition, also, to a consideration of the character of the architecture, whether it be that of simple grandeur or of intricacy and variety, the colouring, if colour be employed at all, should be governed by the climate. Where external nature developes her tints freely, the popular mind is prepared for similar displays on public or private edifices; but where such developments do not obtain, a more moderate share of these excitements will probably be found sufficient."

Miscellanea.

News from Australia.—A meeting of persons interested in the timber trade at Adelaide, was held on 23rd February last, when various resolutions were unanimously passed, condemnatory of the short measurement of cedar sent from Sydney, which seems to be a general grievance at Adelaide. There was a good attendance of influential persons at the meeting, including Messrs. Lines, Brown, Debney, Soward, Farr, Stewart, Clark, Pulsford, Mayfield, Hill, Smith, Macgeorge, Noltenius, and Wentzel. Mr. J. F. Ross also sent a letter describing his losses from false measurements.——The Episcopal church of St. Luke, Adelaide, erected in the south-west part of the city, facing Whitmore-square, was consecrated by the Bishop of Adelaide in February last. The Adelaide *Observer* describes the edifice as being 66 feet in length by 44 feet in width, including the side aisles. The pulpit and other internal fittings are of cedar. There is a large Gothic window over the altar, the upper part of which is of stained glass, in which blue, crimson, amber, and white are blended. In the centre there is a cross, which is surrounded by a star, formed by the intersections of three triangular devices. The window has been constructed by Mr. Brooks, of North Adelaide. The erection of the building has been effected under the superintendence of Mr. Thomas Hall. The total cost, including the internal fittings, will be about 1,200*l.*——The Melbourne Public Library was opened with great ceremony by His Excellency General MacArthur, in the beginning of February. Although quite in its infancy, it contains about 3,000 volumes of choice books, and has been opened to the public under liberal regulations.——The new lighthouse on Troubridge Island has been completed. The engineers were Messrs. Gordon, of England, Mr. Hyndham, superintending engineer, and Mr. Coleman, of the Port of Adelaide, the contractor for the foundations of the tower.

Adornment of Public Places.—The *Critic* says:—"In France the public lounges of even a provincial town are decorated with a luxury which is quite unknown to us; but with us it seems a rule that the more public the place, the more shabby and disreputable its condition. Take, for example, Richmond-hill. When a foreigner comes among us, almost the first thing that he is told is that he must see the view from Richmond-hill. He goes, he sees, and he admires. It is perhaps a little too highly cultivated, yet 'tis a glorious view, worthy the pencil of Constable or of Claude; but the appointments and decorations of the terrace are beneath contempt. Were this in France, it would be supplied with a tesselated pavement, bronze railing, and decorative statues—things not very important in themselves, but which would certainly enhance the pleasure to be derived from visiting the place. But what is the fact? Is it not mean, insignificant, disgraceful? Two or three miserable benches of the commonest and most ungraceful form, and made of the most ordinary material. Instead of railings we have a common chain, and how fixed, think ye? Why, fastened to the magnificent trees which crown and dominate over the view: each mighty bole has a great cicatrix in its bark, which proves too significantly that the iron hath entered into its soul. As if to supply an added ignominy to the degradation, we notice also that the trees have been mutilated, in order to afford a view to the houses of the Prince de Joinville and his neighbours, which have been built in their rear. It is the same thing in Hyde-park, the great promenade of London. There the seats, the barriers, everything is of the meanest description. When shall we learn to take a lesson of our neighbours in this respect?"

Kilburn.—The first stone of a new church, to be called "St. Mary's, Kilburn," in the parish of Hampstead, was laid by the Hon. General Arthur Upton, on Saturday, the 31st ult. The church consists of nave, aisles, transepts, chancel, and chancel aisles, with a tower and lofty-broach spire at the south-west angle. The accommodation provided is for 1,160 persons, including children. The style of the building is the flowing Middle Pointed. The cost will be 8,000*l.* The architects are Messrs. Francis; and the builders, Messrs. Holland, of Duke-street, Bloomsbury. The following were the tenders:—

Foundations:—

Hopkins and Roberts	£373
H. and R. Holland	340
Myers	310

Carcase of nave and aisles:—

Rigby	3,105
J. and C. I'Anson	2,802
Hayward and Nixon	2,786
Hopkins and Roberts	2,697
G. Myers	2,620
W. Higgs	2,415
Pollock and McClennan	2,323
H. and R. Holland	2,244

THE IRON TRADE.—The first (preliminary) meeting of the iron masters of South Staffordshire and East Worcestershire, was to be held on the 26th instant. Some of the masters themselves are already advocating a reduction of bars to 8*l.* per ton. Demand is very slack at present. There are various speculations as to the cause of the diminished demand from America, amongst which is the very unlikely one that "rumours of war" have been the cause,—a cause which would have *stimulated* the demand were not the Americans in a position to rely on themselves, as in all probability the strange "cantrips" in the English trade of late years have taught them to do. The hopes, at least, of the Americans, for the future, may be gathered from the following quotation from the *Scientific American*:—"Recently a kind of pig-iron (the Thomas, of New Jersey), has been brought into the market, which, for the most of purposes, will supersede the Scotch pig-iron, and it sells for three dollars less per ton. It is very soft, and flows smoothly, and is therefore well adapted to mix with our general hard and strong American cast-irons. The great variety of iron ores in our country, and the vast extent and easy working of our coal beds, demand from our iron manufacturers much better and cheaper cast-iron than has been produced. We ought to make—and yet shall make, we believe—the cheapest iron in the world. Who can describe the benefits that would be conferred on our people, if iron were sold for one-half its present price? It would tend to reduce the cost of machinery, and give an impetus to every branch of business in our country,—agriculture, architecture, commerce, &c. We hope and trust that our iron manufacturers will heed these suggestions, both for their own sakes and that of the public."——Some interesting analyses of cast-iron have of late been made in the United States arsenal, at Pikesville, Md. The extraneous substances combined with the iron were found to be allotropic carbon, combined carbon, silicium, slag, &c. It would appear that the iron having the greatest amount of combined carbon with the least slag was the best, and was found to be made by the cold blast. The hot blast appears to drive off some of the combining carbon, at the same time leaving a greater quantity of allotropic carbon, existing in a form analogous to graphite, or black lead, which is injurious. From the analysis it is concluded that hot blast is inferior in strength to cold blast iron. Great advances have yet to be made in the manufacture of cast-iron to improve its quality and reduce its cost.

GAS.—The Swinton and Mexbro' Gas Company is now established. It is proposed to light the adjoining villages of Mexbro' and Kilnhurst. The contracts for the building and machinery have been let, and are to be completed before October. Mr. Cashin, of Sheffield, is the engineer.——The Brackley Gas Light and Coke Company have resolved on a dividend of 5 per cent. free of income-tax, on the share capital of the company, besides placing a good sum to the reserve fund. On 29th September last, the directors reduced the price of gas 1s. 8d. per thousand feet, with a further allowance of 10d. per thousand to large consumers, the result of which has been a very large increase in consumption compared with any former year.

THE M'LELLAN GALLERIES, AT GLASGOW.—One good result of the acquisition of Mr. M'Lellan's picture galleries by the Town Council, says the *Glasgow Gazette*, may be learned from the fact that Mr. William Euing, an esteemed citizen of Glasgow, has gifted no fewer than thirty of his splendid paintings to the Municipal Corporation for the enjoyment of the citizens, and we have no doubt that others will follow his example.

DOVER LOCAL BOARD OF HEALTH AND ITS LATE ENGINEERS.—The action brought against the Dover Board of Health, a few months ago, by Messrs. Rammell and Lister, came on for hearing last Wednesday, in the Court of Common Pleas at Westminster. The suit was for 1,800*l.* the balance of the engineers' claim for professional fees on the works of drainage and water supply, designed by them and recently completed. The case did not go to the jury, but at the last moment the legal advisers on either side arrived at a compromise, the advisers for the local board consenting to pay Messrs. Rammell and Lister, 1,300*l.* and to bear all the costs. It is understood that the law expenses on both sides will be very heavy.

MONUMENT TO PROFESSOR WILSON, AT EDINBURGH.—At a recent council meeting, the Lord Provost stated that Mr. Fraser, late Dean of Guild, and Mr. Cousin, the superintendent of works, to whom had been remitted a memorial regarding a site for a monument to the late Professor Wilson, in East Princes-street-gardens, had as yet made no report on the subject, and that the sculptor, Mr. Steel, was said to be anxious to have the site fixed, as his modelling for a cast of the statue of Professor Wilson was in a very advanced state.

THE PROPOSED SUEZ SHIP CANAL.—The favourable report, of 6th January, 1856, to the Viceroy of Egypt, by a committee of the International Commissioners on this question, consisting of Messrs. Conrad, for Holland; Renaud and Lieussou, for France; Negrelli, for Austria; and Maclean (colleague of Mr. Rendell in this commission) for England, has placed the Suez ship canal question in a new and important light as respects the prospect of its realization. A thick pamphlet or volume, titled "New Facts and Figures relative to the Isthmus of Suez Canal; edited by M. F. De Lesseps, minister plenipotentiary, with a reply to the *Edinburgh Review*, by M. B. St. Hilaire, member of the Institute of France," has just been issued by Wilson, of the Royal Exchange, London, which will be found to contain much interesting information and discussion on the subject. The *Edinburgh Reviewer* is ably handed by M. St. Hilaire, and we are glad to find our prepossessions in favour of the proposed canal so completely justified by the report of the International Commission. The works will, it seems, not exceed 8,000,000*l.* in all, the amount of the original estimate of the Viceroy's engineers. The route by Pelusium is that indicated, the Alexandrian route having been found to be practically out of the question.

ARCHÆOLOGICAL PUBLICATIONS.—The Sussex Archæological Society have had published, by J. R. Smith, of Soho-square, their seventh volume of "Sussex Archæological Collections." Besides the annual report, list of members, rules of the society, catalogue of antiquities, &c. the volume contains numerous papers, pretty fully illustrated with engravings: the more important of these papers, exclusive of some family memoirs, documents, and extracts, are the following:—On Sedgwick Castle, by the Rev. E. Turner; on Dureford Abbey, by Mr. W. H. Blaauw; on the Abbey of Robertsbridge, by the Rev. G. M. Cooper; on the Saxon College of Bosham, by the Rev. E. Turner; Notices of Winchelsea, by Mr. W. D. Cooper; and on the Church of Worth, by Mr. W. S. Walford.——The first part of the first volume of the "Transactions of the Surrey Archæological Society" for the years 1854, 1855, has been issued for the society by the same publisher. It contains papers on the Archæology of Surrey, by the Rev. O. F. Owen; on the Religious Bearing of Archæology upon Architecture and Art, by the Rev. J. Jessop; on the Kingston Morasteen, by Mr. W. Bell; on the Warham Monument in Croydon Church, by Mr. G. S. Steinman; on the Roman Road between Silchester and Staines, by Lieut.-col. P. L. M'Dougall and Mr. E. J. Lance; on Mural Paintings formerly in Lingfield Church; on an Ancient Barrow at Teddington; and on Chertsey Abbey Charters. There are various illustrations to some of these articles, and to one on coins amongst the number.

WARWICK WATER SUPPLY AND DRAINAGE.—The tender for drainage and water supply made by Mr. James Marriott, of Coventry, has been conditionally accepted by the Local Board of Health. There were sixteen tenders sent in, four under 10,000*l.* and twelve from that to more than 15,000*l.* As the committee could not spend more than 10,000*l.* only the four tenders under that amount were considered, viz. Edward Knight, Manchester, 9,542*l.* 7s. 7½d.; James Marriott, Coventry, 9,948*l.* 3s. 6d.; George Steene, Lichfield, 9,432*l.* 9s.; and Rumble and Vint, ditto, 7,916*l.* 16s. 4d. On resolving that Mr. Marriott's tender be accepted, it was also agreed that Mr. John Disney be engaged as chief superintendent of the works, at twelve guineas per month, and that Mr. J. W. Croker, of London, be the assistant, at eight guineas per month.

HORRIBLE DEATHS BY SUFFOCATION AT LIVERPOOL.—On Friday in last week some men were engaged in making a branch sewer, for the purpose of draining a cesspool at Thirty-four-court, Upper Mann-street, Toxteth-park, and one of them broke a hole for the purpose of forming a connection with the sewer, when he was overpowered by the effluvium, and fell into the drain face downwards. Another jumped in to render him assistance, and instantly shared a similar fate; when another also went to the rescue, but was in a moment overpowered. A fourth followed with a like result; but proper aid was now at hand, and when lifted out, two of the poor fellows were found to be quite dead, and the other two unconscious; but after restoratives were applied, the two latter gradually recovered. At the inquest it was stated that, after the accident, 5 feet deep of nightsoil was found in the pool, which had not been cleaned out efficiently for four years. A verdict of accidental death was returned.

ARCHITECTURAL ASSOCIATION.—The session will close on (this) Friday, the 27th, when the officers for the ensuing session will be elected, and various propositions brought forward. It has been suggested that the meetings of the Association should be held as early as possible at the Rooms of the Architectural Museum.

ADVANTAGES ON THE FINE ARTS.—At the Polytechnic Institution, Mr. Jacob Bell a few evenings ago, delivered a lecture, one of a series intended for the benefit of the working classes of the metropolis, on the advantages of the fine arts, as an important branch of general education. Mr. Bell reminded his hearers that art is a language understood over the whole globe, but which has unfortunately been too much neglected amongst us. The lecturer advised the working men who wished to gain a useful knowledge of art, to begin by sketching groups of familiar objects, and exhibited seventeen large chalk drawings,—dogs, dead and alive; some seen sideways, and others foreshortened, which had considerable artistic merit. He regretted the want of care which had nationally been shown to art, and the little encouragement which had been given to those who wished to bequeath valuable pictures to the country, noticing the cellar accommodation which had been afforded to the collection of Mr. Vernon, and the pictures of our inimitable Turner, and contrasted the almost incredible sums expended on the war with those expended in the cultivation of the arts of peace. He mentioned the great good which had resulted from the efforts of the Art-Union of London,—not only from the value of the sums which have been distributed for paintings, &c. but also in consequence of having in many instances led from the possession of one picture through the Art-Union to the formation of extensive and valuable collections of both oil and water-colour paintings, statuary, and prints.

ERITH AND THE METROPOLITAN DRAINAGE.—On Thursday in last week at a vestry meeting held in the parish church, Erith, resolutions were passed containing a strong condemnation of the contemplated proceeding on the part of the Metropolitan Board of Works, which, it was urged, will occasion an accumulation of soil and filth from fifty main sewers on the north, and twenty-one on the south side of the Thames to be poured into and meet at a point of the river not far from Erith. A committee was appointed to resist the plan proposed, and a voluntary rate was agreed to be entered into to defray the necessary expenses.

A NEW CHURCH ON THE BOSPHORUS.—A new church, erected at Ortakeoi, a village on the banks of the Bosphorus, was opened for divine worship on Whit Sunday. It is placed under the charge of a missionary from the Propagation Society. The design is Early English, the roof, of lofty pitch, that of an equilateral triangle. The edifice consists of nave, chancel, transept, and campanile. The east and west windows are large, and six dormer windows are placed just above the eaves. The fittings are exceedingly simple.

THE ROYAL FREE HOSPITAL, GRAY'S-INN-ROAD.—At the death of the Duke of Sussex, Grand Master of Freemasons, a subscription was entered into to erect a memorial to his memory. This subscription amounted to about 1,600*l.* and after some deliberation it was determined to present it to the Royal Free Hospital towards the erection of a Sussex wing, on their obtaining a sufficient farther sum to carry out such a design. A sufficient amount was considered to have been reached last year to justify the committee in proceeding with the work; and accordingly in July last the foundation-stone was laid, with masonic honours, Brother Dobie officiating. Last week the new wing was opened. It is calculated to afford accommodation for 135 beds, fifty-four of which, however, were displaced by the alterations in the new building, necessary for the new wing, so that the real number of additional beds is about eighty, making the total number of beds in the hospital about 200 in all. Messrs. Nelson and Innes were the architects.

AN INDIAN CHURCH BY A MILITARY ARCHITECT.—A church is being erected at Umballah, N. W. Provinces, India, from the design and under the superintendence of Capt. G. F. Atkinson, Bengal Engineers. The tower and spire will be 200 feet high, the nave 117 feet by 30 feet, the chancel 50 feet by 26 feet, the walls 45 feet high to roof, top of roof 65 feet. The church when completed, it is said, will be one of the finest in India.

AN ANCIENT HINDOO CITY.—An interesting pamphlet has lately been published at Bombay by Mr. Bellasis, collector of Hyderabad, in Scinde, containing an account of his excavations and discoveries on the site of the ancient city of Brahminabad, on a branch of the old bed of the Indus. Tradition affirms that the city—the capital of a Hindoo kingdom to which the tide of Mahomedan invasion had scarcely penetrated—was destroyed by fire from heaven and by earthquake on account of the wickedness of its ruler. The investigations of Mr. Bellasis seem to prove that the place really was destroyed by some terrible convulsion of nature, which probably, at the same time, completely changed the course of the Indus. The time of its destruction he conceives to have been about A.D. 1020.

THE STATE OF ARCHITECTURE ON THE LUNAR SURFACE!—Though negative in their results, the observations already made by Lord Rosse with his great new telescope are interesting. His lordship assures us that every object on the surface of the moon 100 feet in height is now distinctly visible, and under favourable circumstances even objects 60 feet in height. Rocks and stones innumerable are seen, but *no architecture—no building*, although such a single structure as Somerset House, for instance, ought to be distinctly visible, far less a street, a village, or a town. Not a vestige of green fields or of water appears, although even a small reservoir or a not very large flower-plot would be recognizable: all seems desolate. There is something awful in such a desert solitude. But the earth, too, has its desert wastes. Can it be, that what we do see of the lunar surface is but its desert districts, while what we do not see is not unlike the face of our own planet elsewhere than in its solitary districts? There is an ingenious theory of the moon consistent with such an idea, and we cannot see how the quibbling question of the lunar rotation can subvert the inferences and conclusions based upon that theory. Let us suppose that the lunar form is that which would naturally arise from the operation of the centrifugal force on a (once?) fluid sphere revolving and say even rotating round its primary, so as always to present the same phase towards the primary, that is towards the centrifugal centre. Would not the fluid mass of the sphere so revolving and rotating be centrifugalized out of the strictly spherical form, and become oblate with its greatest diameter in the line of the radius uniting it with its primary? And if there existed even a fluid ocean and an atmosphere on the surface of such a sphere, would not that ocean and that atmosphere be also centrifugalized or driven outwards to the hemisphere farthest from the primary? In such a case, the base, as it might now be called, of the oblate sphere, or its hemisphere next to the primary, might well be a desert waste, without a drop of water, while the exterior hemisphere, invisible from the primary, might for all that be full of life, vegetable and animal, though subject to laws very different from those which prevail upon the surface of the earth, at least in its temperate and tropical regions.

PRESTON WATERWORKS.—Mr. Joseph Quick, C.E. in a report to the council of Preston, on the state of the waterworks in progress, recommends a modification of the works at Grimsargh, whereby the original estimate of 22,503*l.* odds might be reduced by 7,648*l.* by completing for 8,955*l.* the works already begun, and on which 6,000*l.* have been expended. The storage, it is reported, might be increased from 159,093 3/4 gallons to 289,936,004 gallons, by raising the banks of the Spade-mill reservoir two or three feet, or by enlarging the Alston reservoir. Mr. Quick very much questions whether the Grimsargh works can be completed, as proposed, within the original estimate, and hence his suggested alterations.

WORCESTERSHIRE ARCHITECTURAL SOCIETY.—The first excursion of this society for the season took place on Monday in last week, when nearly forty members and visiting friends assembled. Leigh Church and the site of the ancient Court-house were inspected, the Rev. Mr. Bradley ("Cuthbert Bede"), receiving the party at Leigh. Thence they went to Alfrick Chapel, Lulsley Chapel, Osebury or Rosemary Rock, and Knightsford-bridge, where they dined, and afterwards proceeded to Whitbourne Church and Court, the new church near the inn, and the top of Ankerdine-hill. On their return to Worcester, the churches of Broadwas and Cotheridge were inspected.

BOARD OF WORKS, IRELAND.—Mr. Jacob Owen, architect to the Board of Works, has retired on superannuation of 1,000*l.* per annum, his full salary. Mr. James H. Owen (son of Mr. Jacob Owen), junior clerk of works, has been appointed architect to the Board of Works, at a salary of 800*l.*

MOTIVE POWER.—Mr. Thos. R. Cooper, of Battersea-fields, has provisionally specified an invention for obtaining motion, with power and velocity, by purely mechanical means. The motion is to be obtained "by a certain combination and position of machinery, not hitherto known or adopted."

THE FARRINGDON-STREET BRIDGE.—Going down Holborn-hill on the outside of an omnibus, it occurred to me that the great inconvenience and labour of descending Holborn and ascending Snow-hill might be prevented by throwing a light iron bridge over Farringdon-street, and thus bringing the top of Holborn and Snow-hill on a level. The bridge would be in the centre of the roadway, and ample room would be left for traffic on either side of the bridge. If a company might be formed and allowed to charge a halfpenny for the accommodation, it would pay well; but it should be stipulated in the agreement that the bridge, after a certain number of years, should be given up to the public free.

A TIME-SAVER.

RAILWAY MATTERS.—The Manchester, Sheffield, and Lincolnshire Railway Company being about to build a number of offices in the vicinity of the Royal Docks, Grimsby, have accepted the tender of Mr. Huddlestone, of Lincoln, amounting to 3,410*l.*——The North Kent Railway branch line of the South-Eastern was opened from Strood to Maidstone on Wednesday in last week. For eleven miles in length of this branch the original estimate was 250,000*l.* but it will be exceeded by 100,000*l.* mainly, it is said, from exorbitant demands made by landowners on the line.——About 900 of the *employés* at the goods stations of the London and North-Western Railway Company, at Liverpool, are at present on strike, or rather have dismissed themselves, since the Marquis of Chandos, the chairman, refuses to have any farther conference with them. Of the number, upwards of 100 are clerks, who have adopted this mode of protesting against certain reductions which have been recently made in the numbers and remuneration of that branch of the service. A new superintendent, it is also said, had brought strangers from elsewhere, and set them in advanced posts instead of promoting old *employés* at Liverpool. The remainder are porters, pointsmen, sheeters, &c. who were contending for a uniform remuneration at the rate of 24s. weekly, whereas the company declined to pay more than 21s. to casual or inexperienced hands. The directors have brought new hands from other places, and are gradually filling up every vacancy, greatly to the hinderance of business and the loss of the company in the meantime.

SPLENDID DWELLINGS IN AMERICA.—The mania for building splendid dwelling-houses, so prevalent a short time ago, says the *New York Times*, has sensibly abated, and this spring but little building of this character is going on. There is promise, however, of a partial revival next autumn, when gentlemen have returned from their travels, and to which time several very heavy contracts are postponed. As affording some idea of the extent to which the "merchant princes" of New York have invested in private mansions (a description of property not celebrated for its dividend-paying qualities), it may be stated that there are at least a dozen houses in the city which cost from 100,000 to 150,000 dollars—rivalling in magnificence almost any of the royal palaces of Europe, and inferior only in point of magnitude. Nearly all these have been recently erected. . . . The laws of England favour such arrangements by making the eldest son the sole heir of the paternal estate. But in this country, where primogeniture does not obtain, the property of our wealthiest men, upon their death, must be divided among all their children, and the chances are, that upon the death of the original owner, and the division of his estate, his house must be sold—for less than half its cost—and converted into a boarding-house. This has been the fate of many such establishments in this city, and the wonder is that the lesson thus conveyed is not more widely learnt.

WATER IN THE DESERT BY BORING.—A letter from Algiers states that water has been discovered at Tameins, near Bethna, on the edge of the southern desert, after boring to a depth of about 200 feet. This was the first well bored on the European plan; and as the place had always suffered dreadfully from drought, the natives, it is said, manifested "frantic joy" on seeing the water burst forth.

THE PRINCE'S-GATE AND BROMPTON-SQUARE THOROUGHFARE.—The Board of Works have resolved to adopt their committee's report on this subject, to the effect that as an application to Parliament would be necessary for the object suggested, the Board cannot carry it out, and that they have no power to delegate their authority to others, interested, and willing, it was said, to pay the cost of carrying out the work.

ROYAL LYCEUM THEATRE. — The character of *Pia dei Tolomei*, in the tragedy of that name, has enabled Madame Ristori still further to establish her claim to the possession of histrionic genius of the highest character. The play is not remarkable for fine situations or opportunities,—working up mainly to the death of the maligned *Pia* in the marshy wastes of the Maremma of Sienna; but every act is nevertheless made the occasion for a display of ability and power; and when sinking inch by inch, with attenuated form and exhausted system, flashed into life for an instant by the repentance of her husband, she expires at his feet, the audience display, first by stillness and tears, and then by applause of no common kind, her hold upon their feelings. Ristori is truly a great artist.

FULHAM-BRIDGE.—Having seen a letter in your paper, from a correspondent, relative to Fulham-bridge, I shall feel obliged by your correcting two errors; first, the watermen of Fulham and Putney, receive 62*l.* per annum, and not 30*l.*; secondly, the tolls are not double on Sundays, except for foot-passengers.—HENRY CHASEMORE, Secretary.

GREAT AMERICAN CANAL PROJECT.—The *New York Times* states that, at a meeting of the Pittsburg Board of Trade, a gentleman submitted a proposition (unanimously approved of) on the subject of improving the Ohio river, by converting it into a slack-water canal. From Pittsburg to the mouth of the Ohio is 977 miles, with an aggregate fall of 423 feet. To convert the river into slack-water would require fifty locks. To give a series of deep pools, affording a safe and easy navigation for the largest steamers and the heaviest barges, it is proposed to raise dams 10 or 12 feet high, giving 5 feet water at the upper ends. The estimated cost of the work is from 7,000 to 10,000 dollars per mile, or from 7,000,000 to 10,000,000 dollars for the whole work.

VARNISH.—"A Subscriber" wishes to know what is the most transparent and durable varnish, at the same time capable of being polished? The white polishing copal is the kind of varnish required: it can be obtained of any respectable varnish-maker.

W. E.

[ADVERTISEMENT.]

TO THE EDITOR OF THE BUILDER.

MESSRS. CLARK AND CO. of 15, Gate-street, Lincoln's-inn-fields, having erected at our premises two very large revolving-shutters, one weighing upwards of two tons, we feel much pleasure in recommending them, having acted exceedingly well during the whole of the three years they have been in use; also for the lowness of their charges and rigid punctuality, entitling them to the support of all those with whom durability is economy and time saved money made.

Our shutters may be seen nightly in active operation at eight o'clock.

SOWERBY, TATTON, AND COMPANY,
Linendrapers.

Regent-circus, Oxford-street.

TENDERS

TO CORRESPONDENTS.

"*Whitewash on Slate.*"—I want to know the means of fastening whitewash on the exterior of a slate roof? The object is to reflect the sun's rays and to lower the temperature under the roof.—P. B.

"W. H. P."—"J. H."—"G. H. S."—"J. W."—"Justice" (the measuring has been paid for by Sir C. Barry).—"S. P. X."—"J. E."—"T. D."—"C. and H."—"W. Y."—"C. E." (if the contractor assented to the condition that the architect should not be held responsible for correctness of the bills of quantities, of course he has no remedy against him).—"C. K."—"E. R."—"H. J. P."—"H. J."—"S. L. M." (under our limit).—"P. S." (ditto).—"W. W."—"C. P."—"S. P."—"Architect's Assistant."—"Young Engineer."—"A. W."—"W. G."—"T. G."—"H. C. M."

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

ADVERTISEMENTS.

AGENTS WANTED, for the SALE by CONTRACT of WELSH PAVING SETS, CHANNEL STONES, STONE for CROSSINGS, WHEELERS, and every other variety of first-rate quality for durability, similar to what are laid and highly approved of by Liverpool, Manchester, and other Corporations. Address (with reference) A. B. (Stone), care of Mr. Dissiter's, No 2 3, Strand, London.

ENGINEER WANTED.—Wanted, immediately, an ENGINEER for the Wilts County Asylum, Devizes. He will have the care of the steam-engine, pump, heating apparatus, and gas works, in which duties he will have suitable assistance. He must also be competent to undertake the repairs in the smith's work throughout the Asylum. An unmarried man will be preferred. Commencing salary, 40l per annum, with board, lodging (for a single man), and washing in the establishment.—Applications, with references as to character and qualifications, to be addressed to Dr. THURNAM, superintendent at the Asylum.

EMPLOYMENT can be GIVEN to TWO PERSONS in the FRET LEAD GLAZING. Three months' engagement can be guaranteed. Apply at C and A. GIBBS'S Stained Glass Works, 22, Allsop-terrace, New-road, St. Marylebone, London. Apply between TEN and FIVE o'clock.

TO SLATERS AND SLATE MASONS.

WANTED, an active, intelligent Man, as WORKING YARD FOREMAN. He must thoroughly understand both branches of the business, and give good references as to integrity, sobriety, and ability. Salary progressive.—Address, in own handwriting, to Mr. A. A. ROBINSON, Bow-bridge Slate Works, Stratford, near London.

WANTED, a FRET LEAD GLAZIER, who has been used to church work, and also has a knowledge of plumbing, &c. References, &c. required.—Apply at 39, Brewer-street, Golden-square.

TO HOUSE PAINTERS.

WANTED, several good HOUSE-PAINTERS. None need apply except experienced workmen.—Address, Mr. V. BRUMFIELD, Plumber, Southampton.

WANTED, in a Builder's Office, a CLERK who thoroughly understands taking out quantities, measuring, estimating, drawing, and the general routine of the office. Apply by letter, stating age, where last engaged, and salary required, to H. S. Office of "The Builder." A liberal salary would be given.

TO BRICKLAYERS.

WANTED, immediately, BRICKLAYERS to take the BRICKWORK of FOUR HOUSES at Camden-town, the contractor to find his own scaffolding.—Apply to J. B. H Engineers' Tavern, Gloucester road, near Chalk-farm, on MONDAY Morning, the 30th inst. at TEN o'clock, for all particulars.

WANTED, by an experienced Carpenter and Joiner, a SITUATION as WORKING SHOP, or OUT-DOOR FOREMAN. Has travelled similar situations, and can produce satisfactory testimonials as to ability, &c.—Address, A. S. 56, Shepperton-terrace, Rosemary-branch-bridge, Islington.

WANTED, a SITUATION, by a Person who has a thorough practical knowledge of building, either for the whole or part of his time. He can make working plans and specifications, take out quantities, and estimate.—Address, B. B No. 4, Wilmington-street, Bloomsbury.

WANTED, by a first-rate Draughtsman, Writer, and Colourist, an ENGAGEMENT, to make finished maps and plans of estates, towns, parishes, railways, docks, drainage, &c. Has for eighteen years executed schemes and projects, in every variety, for the profession and the Government.—Apply, by letter, to R. THLODORL, 4, Trafalgar-square, Charing-cross.

WANTED, a SITUATION as CLERK of of the WORKS. Is a good draughtsman, and competent to prepare fair working drawings. Is well experienced in all the branches of building, and has first-rate testimonials. Address, A. Z. 3, Bloomsbury-terrace, Vauxhall-road, Pimlico.

TO CARPENTERS AND OTHERS.

WANTED, by a Young Man, aged 21, a SITUATION as TIMBERYard. Has been used to the bench.—Address, by letter, post-paid, J. B. 5, Mount pleasant, Gray's-inn-lane.

TO PLUMBERS AND BUILDERS

WANTED, by a Young Man, a SITUATION as PLUMBER. No objection to fill up his time with glazing and painting.—Direct to N. R. 17, Norfolk-place, Curtain-road, Shoreditch.

TO DECORATIVE ARTISTS.

WANTED, by a Young Man, a RE-ENGAGEMENT, in London. He can design, has a practical knowledge of the art in all its branches, and will be happy to make himself generally useful.—Address, D. A Office of "The Builder."

TO BUILDERS, PLUMBERS, &c

WANTED, by the Advertiser, a SITUATION as PLUMBER'S LABOURER. Can fill up his time at plain painting if required. Has an excellent character from the situation he has just left. Wages not so much an object as constant employment.—Address, P. L. 63, Goswell-road, London.

WANTED, by a Young Man, aged 17, an IMPROVER'S PLACE in the CARPENTERING and BUILDING LINE.—Address, J. W. 294, Farringdon-street, City.

TO HOUSE AGENTS AND BUILDERS

WANTED, by a Young Man, a PERMANENT SITUATION as Decorative Paperhanger and Painter.—Address, A. B. 50, Friar-street, Blackfriars road.

TO ARCHITECTS, BUILDERS, &c.

WANTED by the Advertiser, a SITUATION as CLERK of WORKS, or Assistant in an Office, for two or three days a week; is a good draughtsman and accountant, and has had considerable experience in farm buildings and villa architecture. Can give ten years' character and first-class testimonials, both from Government and private office.—Address, R. E. Tennant's, Printer, Broadway, Stratford, Essex.

TO BUILDERS, PLUMBERS, &c.

WANTED, by an experienced PLUMBER, a PERMANENCY. No objection to fill up time painting and glazing.—Address, S. H. No. 3, Great Turnstile-lane, Broad-street, City, London.

TO BUILDERS AND MERCHANTS.

WANTED, by a married Man, aged 23, a SITUATION as BOOKKEEPER or TIMEKEEPER, in an Office or in Works. Could attend to accounts and packing in a Warehouse. The advertiser writes well, is a good hand at lettering, and can work at the carpentering.—Address, B. C. H. Post-office, Oundle, Northamptonshire.

WANTED to APPRENTICE a YOUTH, aged 14, to a MASTER CARPENTER and BUILDER. Address, A. B. 21, Fore-street, City.

TO BUILDERS, PLUMBERS, PAINTERS AND OTHERS

WANTED, a SITUATION as FOREMAN, or to Manage a Business. The Advertiser, a steady, active man, who thoroughly understands all the branches of the trade, can take out dimensions and make estimates, if required, or make himself generally useful in the same.—Address, post paid, G. W. C. Office of "The Builder."

TO ENGINEERS CONTRACTORS &c.

WANTS EMPLOYMENT, as DRAUGHTSMAN, or Draughtsman and CLERK, a Young Man, a practical engineer and draughtsman, who has filled a similar situation.—Address, J. P. Office of "The Builder."

WANTED, by a Young Man, a SITUATION in a JOINER'S SHOP, as an IMPROVER. Has been six years in the cabinet line. Wages not so much the object. Address, J. D. Office of "The Builder."

TO PLUMBERS, BUILDERS, GASFITTERS, AND OTHERS.

WANTED, by an experienced active Young Man, a SITUATION as Plumber, Painter, Glazier, Gasfitter, and Paper Hanger. Wages not so much an object as a permanent situation. No objection to the country. Address S. SIMMONS, 8, Albert-place, Hornsey-road, Holloway.

WANTED, by a Young Man of industrious habits, EMPLOYMENT in either town or country.—Apply, B. Shoe Warehouse, 1, Queen's Head-row, Newington, Surrey.

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

TEMPORARY ASSISTANCE afforded to the above on exceedingly moderate terms, in preparing and copying plans, specifications, estimates, &c.—Address, W. W. care of Mr. Harris, No. 6, Exmouth street, Clerkenwell.

TO CIVIL ENGINEERS AND SURVEYORS.

THE Advertiser, whose engagement with a Surveyor to the Metropolitan Board of Works has just expired, is desirous of EMPLOYMENT in the Office of either of the above. He can engage in surveys, take levels, trace neatly, and is a fair draughtsman.—Address, T. C. E. care of Mr. T. Chester, Eltham, Kent.

TEMPORARY ASSISTANCE.—The Advertiser, who is known to many architects in London, is in the habit of rendering occasional assistance on Gothic and other general work, either by preparing working drawings at his own office, or by attending out for short periods.—Address, A. B. care of Messrs. Soyer and Co. 113 High Holborn.

TO ARCHITECTS AND SURVEYORS

THE Advertiser is desirous of a SITUATION, at a moderate salary, in either of the above offices. Where he might after a period have an opportunity of purchasing a share in the business would be preferred.—Address, R. M. 23, Westmoreland-place, City-road

TO MILLOWNERS AND OTHERS.

THE Advertiser, a Young Man, aged 25, is desirous of meeting with a SITUATION as an ENGINEER, where a knowledge of either stationary or marine engines is required, and to keep machinery in repair. No objection to the country.—Address, A. J. 20, Richmond-street, St. George's-road, Southwark.

TO BUILDERS and OTHERS.—Books and Accounts made up and adjusted, Balance-sheets prepared, and Statements to lay before Creditors, on moderate terms.—Apply to Mr. MARCH, Accountant, 48, Bedford-row.

THE Advertiser, aged 21, is desirous of obtaining a SITUATION in an ARCHITECTS or BUILDERS OFFICE; has been accustomed to plan and superintend the erection of villas in the country. Has a knowledge of land surveying. Unexceptionable references from the party he is about leaving.—Address, NICHOLSON, Office of "The Builder."

TO TIMBER-MERCHANTS AND OTHERS.

THE Advertiser (age 26) is desirous of EMPLOYMENT as CLERK, TRAVELLER, or SALESMAN. Has had some years' experience in the timber and stone business having a connection among builders. Would have no objection to take an agency in any article consumed by them.—Address, H. S. H. at Mr. Holmes's, Devonshire-street, Hammersmith-gate.

TO ARCHITECTS AND BUILDERS.

THE Advertiser, a thorough practical man, wishes for a RE-ENGAGEMENT as CLERK of WORKS, or BUILDER'S FOREMAN. Unexceptional reference as to character and ability.—Address A. Z. 11, Sutherland-terrace, Pimlico.

TO BUILDERS, &c.

THE Advertisers are prepared to execute PLAIN and ORNAMENTAL PLASTERING, in town or country. Modelling to design and cast, in any of the patent cements now in use.—Apply, A. B. No. 19, Warner-street, Docerros, Borough.

TO BUILDERS, SURVEYORS, &c.

EMPLOYMENT WANTED, by a Young Man, a CARPENTER and JOINER, having a good knowledge of plans and the building trade generally; writes a good hand, and can keep accounts. References and security if required Address, E. T. Y. Cheltenham Coffee-house, Westminster-road.

TO ARCHITECTS AND SURVEYORS.

AS ASSISTANT, aged 23, eight years in the profession—can take out quantities. Terms, 26s. per week. Address, A. Z 30, Haberdasher street, Hoxton.

TO ARCHITECTS, &c

AS CLERK of WORKS.—A Respectable Man thoroughly experienced in superintending architectural works, is desirous of an ENGAGEMENT. Has no objection to the country. Satisfactory references given.—Address, A. G. M. Rose-cottage, Grove-lane, Stamford-hill.

TO BUILDERS, PLUMBERS, GLAZIERS, AND PAINTERS

A THREE-BRANCH HAND in the above trade will be glad of EMPLOYMENT in town or country. Direct J. D. (post paid) Exchange Coffee-house, St. Mary-at-Hill, Eastcheap.

TO ARCHITECTS &c.

AN ASSISTANT, who has been six years in the profession, a good draughtsman, and quick at design, desires an ENGAGEMENT in town or country. Address, DELTA, Post-office, New Brentford, Middlesex.

TO SURVEYORS AND DRAUGHTSMEN

A GOOD DRAUGHTSMAN WANTED, as an assistant for a few months; one who has been accustomed to town surveys and levelling will be preferred.—Address, stating qualifications and terms, to Mr. THOS. FENWICK, Borough Surveyor, Tynemouth

A VACANCY for a respectable Youth as PUPIL.—Address as above.

TO BUILDERS &c.

A YOUNG MAN, a good DRAUGHTSMAN, accustomed to prepare fair and working drawings, draughting specifications, superintending works and workmen, and possessing a thorough knowledge of the trade, desires a SITUATION, where he would be willing to make himself generally useful.—Address, J. K. Willmott House, Old Kent-road.—Moderate salary required.

TO CIVIL ENGINEERS, ARCHITECTS, SURVEYORS, &c.

A YOUNG MAN, aged 17, who understands Surveying, Levelling, Mapping, Drawing, &c. wishes for a SITUATION as an ASSISTANT. Only a small salary required, or for a short time in a respectable office without a salary.—Address, A. B. 38, Henry-street, Pentonville.

TO ARCHITECTS, ENGINEERS, &c.

AS CLERK of WORKS.—A Respectable Man of experience, and with good recommendations, is desirous of an ENGAGEMENT.—Address, W. H. L Post-office, 6, High-street, Newington.

A RESPECTABLE middle-aged Man, of several years' experience in estimating and builders' bookkeeping, wishes for an ENGAGEMENT, either wholly or partly. Unexceptionable references. Address, Z. Z. Office of "The Builder."

AN ACCOUNTANT, of ability and experience, undertakes to MAKE UP ACCOUNTS in arrear, and keep the books of builders, contractors, tradesmen, and others closely posted upon very low terms. First-rate references to character, &c. given. Address, S. Y. Office of "The Builder."

A CLERK of WORKS, with the highest testimonials, is open to a RE-ENGAGEMENT.—Address, D. S. 2, Beaumont-street, Marylebone.

TO BUILDERS AND PAINTERS.

A YOUNG MAN, aged 27, wishes a SITUATION as a GRAINER, and to fill up his time at general work. Is thoroughly competent to do general work in a shop. References can be given. Direct by letter, X. Y. Post-office, Grange-road, Bermondsey.

AS YARD-MAN, TIMEKEEPER, or to take the entire charge of horses and fodder. Can produce most satisfactory testimonials from the employers in whose service he has been several years.—Address, Mr. HALL, No. 1a, Grosvenor-street, St. Peter's-street, Islington.

TO ARCHITECTS AND CIVIL ENGINEERS.

A GENTLEMAN, in practice, with Offices in the Adelphi, would be glad to fill up his vacant time, by ASSISTING in getting up SETS of DRAWINGS or PERSPECTIVES, taking out Quantities, or making Surveys, &c. for the profession generally, on most moderate terms.—Address, X. Office of "The Builder."

TO BUILDERS AND OTHERS.

A GOOD GRAINER WANTS a PERMANENT SITUATION. Specimens may be seen if required. Town preferred.—Address to A. B. 13, Gray's-inn-lane Terrace, Holborn.

A THOROUGHLY-EFFICIENT DRAUGHTSMAN and ARCHITECT wishes to be RE-ENGAGED, and offers his services to the profession. References to first-class London Architects. Terms moderate.—Address, P. O. Office of "The Builder."

TO ARCHITECTS.

A FULLY competent Assistant is in want of a SITUATION. Has had great practice in Gothic work.—Address, C. H. O. 2, Golden-terrace, Bloomsbury-road, Pentonville

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

FREEHOLD GROUND, CHANCERY-LANE.—The Commissioners of Sewers of the City of London hereby give Notice, that they will MEET at the GUILDHALL of the said City, on TUESDAY, the 22nd of JULY next, at TWELVE at Noon precisely, to receive PROPOSALS for taking on BUILDING LEASE for EIGHTY YEARS, at a Ground Rent, certain PLOTS of GROUND, situate on the west side of Chancery lane, and near Fleet-street. Further particulars may be had, and plan seen, on application to Mr. HAYWOOD, Engineer to the Commission, at the Offices in the Guildhall, where forms of proposal may also be obtained. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for their approval, and do not bind themselves to accept any proposal unless deemed advantageous. Persons offering proposals must attend on the above day, and the party whose proposal is accepted will be required to execute an agreement at the time.

JOSEPH DAW, Principal Clerk.

Sewers Offices, Guildhall, June 3, 1856.

FREEHOLD BUILDING GROUND.—TO BE LET or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St. John's-wood.—For particulars apply by letter, post paid, to WILLIAM LEWIS, 2, Craven-terrace, Craven-hill, Paddington.

FREEHOLD LAND for SALE, at 12l. per acre, in lots of not less than five acres. THIRTY ACRES, about three miles from the town of Farnham, and the Aldershot military encampments. The situation is exceedingly picturesque and healthy, join a good road, and offers eligible sites for building. The land having been recently purchased of the Inclosure Commissioners, has not yet been broken up but would pay well for cultivation. It is free of tithe and land-tax.—Apply to Mr. RUDGE, Estate Agent, Farnham.

FREEHOLD BUILDING LAND, HOLLOWAY. TO BE SOLD or LET, in large or small Plots.—Apply to Mr. PEACHEY, 17, Salisbury-square, Fleet-street.

CASSLAND ESTATE, overlooking Victoria-park.—Eligible PLOTS of LAND TO BE LET, for building villas and semi-detached residences; and also Plots of Land, for fourth-rate houses, on the northern portion of the estate.—Plans, &c. can be inspected at the Estate Office, Cassland-road, or at Mr. WALES'S Office, 8, Great St. Helen's, Bishop-gate.

MOORE PARK ESTATE, KING'S-ROAD FULHAM.—Eligible LAND TO BE LET, on Building Leases, for long terms. Ground rents moderate, and advances will be made, if required. Plans, &c can be inspected at the Estate Office, King's-road, near Stanley Bridge; or at Mr. Wales's Office, 8, Great St. Helen's, Bishopsgate.

HOLLOWAY. — Valuable BUILDING GROUND to LET, with liberal cash advances, to respectable builders, admirably situated for good Villa Residences, which are much required in this favourite and highly respectable locality. The situation is most healthy, possesses beautiful and commanding views, and the access to all parts of London easy. Property in this neighbourhood rents and sells rapidly.—For further particulars, apply to Mr GEO CLARKSON, surveyor and Land Agent, 48, Penton-street, Pentonville.
